"Manufactured in British Columbia," if the lumber comes from a reputable mill, means lumber well and carefully sawn, and perfectly machined, quality always being paramount to quantity. It never was intended to apply to lumber split by greased lightning energized by some infinitesimal American wonder.

JACK DONAHUE, Vancouver B.C.

Foreign Trade Opportunities Neglected.

Toronto, Ont., May 12—Editor "Canada Lumberman":—We are receiving quite a number of inquiries from dealers in various kinds of lumber, such as pine, hardwood, mahogany, etc. These inquiries come from New Zealand, Australia, Great Britain, Germany, France, Spain and Cuba. These dealers are asking us to ship direct to them or put them in communication with established exporting dealers in Canadian lumber.

We have communicated with a number of dealers in Canada, but so far have been unable to interest any of them in these foreign markets. It appears that the dealers in the United States pay more attention to foreign markets than our Canadian dealers do. From the view point of the foreign dealers it no doubt seems strange that Canadian dealers are satisfied with the American market for their lumber, which eventually finds its way to the yards of the foreign dealers.

We are of the opinion that as you occupy the central agency of the lumber interest of Canada you would be in a position to place us in touch with dealers who would be willing to handle this foreign trade, if there are any. Without doubt there will necessarily have to be some

education in the matter of terms, conditions of shipment, etc., that are demanded by foreign dealers. At the same time we feel that if there is any profit to be gained, the Canadian dealers should be entitled to it, therefore we feel there should be a general effort made on the part of the Canadians to deal direct with the final market for our products. We would appreciate any information you would give us in the way of putting our clients in touch with dealers who can handle this trade.—A. R. Bickerstaff & Company, Limited.

The above letter is self-explanatory. The "Canada Lumberman" would like to obtain the views of Canadian lumber dealers on this subject, and would appreciate any communications regarding it which may be received.—Editor.

Southern Mills not Curtailing Output.

A well known Toronto lumber dealer who has just returned from a three weeks' visit to the Southern States, reports that there is little prospect of any improvement in the southern pine markets. There is no likelihood of any curtailment of output, and the mills are selling at any price rather than accumulate stocks.

"Southern pine mills," he said, "are not stocking anything. They are selling everything for whatever they can get. The inch and two-inch stuff they are throwing on the market. Wholesalers all figure that the mill men must be losing money. It is thought that prices are at about rock bottom, but there is an indication that they may even go a little lower. Manufacturers are waiting anxiously for the railroads to commence buying. They have not bought for two or three years and their rolling stock is getting pretty low. Many of the railroads have bought no ties for two or three years.

"As to the reports that the mills would shut down so as to assist the market, there is not much truth in them. A few of the smaller ones may have shut down, but the larger ones are still manufacturing heavily. The Fullerton interests, of Chicago, are going to put in a new mill with a capacity of 400,000 feet. The Great Southern Mill, with a capacity of 600,000 feet a day, is cutting 400,000 feet. It is estimated by some of the wholesalers that the large mills are losing as much as \$4,000 or \$5,000 a day and it is not expected now that prices can improve until the fall. Prices of cypress are continuing fairly strong."

Rainy River Lumber Company stops Operations.

A committee has been appointed by the Shingle Manufacturers' Association of British Columbia to look carefully into the unfair tactics of some shingle manufacturers of Washington State, who, it is alleged, have been branding inferior shingles with marks indicating they are of British Columbia origin. A letter has also been sent to the trade by the association to draw attention to this practice. It is expected that the publicity given to the affair will be sufficient to make the Washington men realize the error of their ways and that it will not be necessary to take more drastic measures.

The Rainy River Lumber Company has ceased lumbering operations for the winter. F. H. Warner, the scaler for the company, states that the cut this year on the Red Gut Reserve and berth 28G near Bears Pass, was in the neighborhood of 7,000,000 feet, which, with 4,000,000 feet secured along the Rainy river, will all be sent down the river to the company's mill at Rainy River. On account of the very large stock of lumber left over from last year it was not deemed advisable to log to any greater extent until the market price and demand for lumber materially improved.

C. W. Stancliffe & Company, consulting engineers and agents, 429 Cordova street, Vancouver, recently made the sale of a 15x24 Baldwin mogul locomotive, weighing 74,000 pounds, to the Brooks-Scanlon-O'Brien Company, Limited, of Vancouver. The firm will use the locomotive as part of the equipment of their Eagle Creek Northern Railway at Stillwater Bay, B.C., for their logging operations.

The Dominion Government has decided to reserve a belt of timber land about 90,000,000 acres in extent, running from south of the Crow's Nest line, on the Canadian Pacific Railway, to the international line, and from 59 miles east of the British Columbia boundary line into Alberta. The Government will control the cutting of lumber on this belt, the yield of which, it is calculated, will amount to about 12,000,000 feet per year for the next six years.

A St. John report states that Mr. I. C. Prescott, of Albert, is about to sell his large property, consisting of timber lands, mill, residence, etc., at Albert, the prospective purchasers being a New York concern. It is said that a part of the timber area of G. D. Prescott, M.P.P., will also be included in the deal and that the purchase price is in the vicinity of \$100,000.

Ontario's Timber Policy Changes.

The returns of timber dues received by the Department of Lands, Forests and Mines for Ontario during the last year furnish strong testimony of the return of good times once again in the province. The revenue for the last year was \$1,786,339, the largest in the history of the department. Of this sum \$392,000 arrears carried over from the former bad year was paid in, while the dues amounted approximately to \$1,400,000. The total dues carried over this year were less than \$140,000. On all dues unpaid the lumbermen paid interest at the rate of 6 per cent.

The policy of large timber sales has been discontinued in Ontario. The Minister has declared the adoption of a policy requiring the termination of perpetual licenses. Future sales will be of small blocks of timber under time limit and by public tender, and will only be held under special circumstances, where there has been fire and the timber is burnt over, or where the timber is necessary to supply local demand. The determination to put an end to the permit system announced by Hon. Mr. Cochrane last fall has been put into effect this year. This system was inaugurated many years ago with the legitimate purpose of procuring ties and other timber required for railway purposes. The system grew up in this way, but lent itself easily to abuse. There was no public competition, a deposit was not always required, and during the last ten years it has become increasingly difficult to control.

Since the beginning of the present year all applications for permits have been refused. The Government proposes to survey the timber territory where the permit system has been in vogue, and then ask for bids instead of continuing a system which was found to be bad business and would never have been tolerated in a private business enterprise. Under the permit system doctors, lawyers, butchers and other tradesmen were found trafficking in timber.

It is probable that the duties and responsibilities of the Crown timber agents and forest rangers will also be more exacting. Mining Commissioner Price, who is investigating the alleged irregularities at Fort Frances, where the permit system was in vogue, has been asked by the Minister to make his inquiry a searching one and his report thereon very complete. Upon the findings received the Minister will likely base his future proposals. The department regards it as impossible that the charges could be true other than by forgery or perjury on the part of several men and the laxity or complicity of the Crown timber agent, and the rangers responsible for sample measurements. In all cases of timber sales under the new system of selling by the thousand feet, Hon. Mr. Cochrane has required a bond from the purchaser to protect the province.

Prominent Lumbermen Who Have Passed Away.

Emery Sewell, of Fredericton, N.B., died recently at his home in Gibson. He had suffered from heart trouble for several years. Mr. Sewell, who was in the seventy-first year of his age, was born at Lincoln. He conducted a mill at Upper Mauderville for several years, and also kept a general store and postoffice at that place. He had also been connected with other lumbering operations along the river and at one time was the owner of a fleet of tugs.

One of Halifax's well known and most respected citizens passed away recently in the person of James Dempster. The deceased has been ill for some time, but at first no serious result was anticipated. Mr. Dempster was a native of St. John, N.B., where he was born in 1839. He went to Halifax in 1865, where he had since resided.

In 1869 Mr. Dempster started in business for himself, and erected a factory on North George street in 1871, engaging in the manufacture of general woodwork supplies. In 1883 this factory was totally destroyed, and the firm removed to South Hollis street, occupying the Hill mill, and were burned out there in 1891, returning to the present factory and resuming business.

Deceased was prominently identified with the Masonic fraternity and for over a quarter of a century was Grand Treasurer of the Grand Lodge of Nova Scotia. He was deeply interested in the movement for the Aged Masons' Home, his last active work being in its behalf. He was also a Past Grand Patriarch of the Grand Division S. of T. of Nova Scotia, and on the board of management of the School of Art and Design, as well as the present movement in connection with technical education.

Many of our readers will regret to learn of the death of Mr. A. H. McGaughey, of Deseronto, which occurred on the 11th inst. Mr. McGaughey was widely known to many engaged in the lumber business and highly esteemed for his genial disposition and many other estimable qualities. He was born in the township of Tyendinaga 61 years ago, and started life as a telegraph operator in the town of Napanee, subsequently removing to Deseronto, where he was engaged in the lumber business in the employ of the Rathbun Company, where, by indomitable energy and great ability, he soon attained a high position with that firm. He was 39 years in their service and for the past 25 years was head of their lumber sales department.

Mr. McGaughey resigned his position with the Rathbun Company a

few months ago, owing to failing health, but it will be a great shock to many of his friends to learn that he has passed over to the silent majority. Mr. McGaughey, in addition to his other duties, filled the position of postmaster for a number of years in a most acceptable manner and was one of Deseronto's most esteemed citizens. The funeral, which took place on the 13th inst., was one of the largest seen in Deseronto for many years.

Personal Mention.

A. D. Watson, of the well known firm of cedar pole producers and wholesalers, Reuber & Watson, Chicago, spent a few days in Victoria and Vancouver, B.C., recently. This is Mr. Watson's first trip to the north coast in seventeen years, and he was very much surprised at the growth of the country.

L. W. David, of the Lester W. David Company, Seattle, Wash., was in New York City recently, having returned from London, England, where he has been in the interest of his 125-ton pulp mill and 200,000-foot capacity sawmill being constructed at Cousens Inlet, B.C. Before returning to the Pacific coast Mr. David expects to make another trip to London.

Mr. E. H. Moore, manager of the Prince Rupert Timber & Lumber Company, Limited, is at present in England, negotiating with capitalists who are desirous of acquiring the company's extensive holdings of standing timber in British Columbia, which aggregate over 500 square miles. Mr. J. H. Sanderson is in charge of the company's affairs during the absence of Mr. Moore.

Mr. Ernest Helliwell has assumed the management of the Pacific Coast Mills, Vancouver, in the place of Mr. G. F. Gibson, who has resigned. Mr. Helliwell went to Vancouver two years ago to take an important position in the lumber company, he having formerly had the management of a large milling plant in the State of Minnesota. The Pacific Coast Mills are regarded as one of the model plants of the province.

Edmonton's Cut Will be about 20,000,000 Feet.

Present indications are that the Edmonton mills will begin this year's cut shortly, and that the quantity of logs will not be as great as a year ago. The estimate of the D. R. Fraser Company, John Walters and the Edmonton Lumber Company, is that the cut this year will be about 20,000,000 feet. Of this Walter's mill will get the majority of the logs, but it is too early as yet to make any close estimate of what success the lumbermen have had during the winter. Definite returns have not yet been made from the lumber camps to the headquarters at Edmonton. If increased precautions are effective this year there will not be the loss of logs that the lumbermen had cause to regret last season. New piers have been placed in the river, which are much stronger and in better locations. With these precautions the lumbermen look for a successful run this year unless some untoward circumstance arises.

On June 7th another American Lumber Trades Congress is to be held. The place of meeting will be Chicago. The last Congress was held in Minneapolis, and thirty associations of manufacturers, wholesalers and retailers were represented. An important part of the work done was the adoption of a code of ethics for the industry. Retailers, however, did not seem to abide by the decision of their representatives, inasmuch as the latter were not authorized to act for them. A fair proportion of the manufacturing associations also declined to accept the code. Retailers are now asking to be properly represented, and it is believed that a code of ethics can be adopted which will be satisfactory to all branches of the industry.

The annual meeting of the Buffalo Hardwood Exchange was held May 1st, and the following officers were elected for the year: Anthony Miller, president; Fred M. Sullivan, vice-president, and Arthur W. Kreinheder, secretary and treasurer. No other business of importance was transacted.

The Montreal Builders' Exchange have moved into new premises on the top floor of the Eastern Townships Bank Building, corner of Victoria Square and St. James street. A large portion of the new quarters will be devoted to a permanent exhibition of building materials.

Elk Lake and Gowganda people are paying twice as much for lumber as it costs in the older parts of Ontario. These are mining districts, but are too remote from any manufacturing point to share in the advantages to consumers of lumber in the present dull state of the market. Thirty dollars a thousand is paid for green spruce delivered, which is worth only half that f.o.b. at shipping points. Dry spruce is worth \$40 and common grades of white pine bring \$50 or \$60 a thousand, according to whether the stock is green or dry.

Competition of Canadian Lumber in U.S.

Analysis of the Situation from a United States Point of View — Low Grade Canadian Products Feared More Than Better Grades

The imports of Canadian woods into the United States and the exports of United States woods into Canada as shown by the returns from Washington for a number of years past are discussed in an interesting article in the "American Lumberman." Although Canadians will not agree entirely with the inferences drawn from the figures, they will be sure to be interested in the view of matters as taken by an authority on the other side of the line. The reference to the exports of southern pine into Canada are open to criticism. There is only one field for southern pine in Canada which cannot be filled by Canadian pine, and that is in the production of large timbers. For all building materials Canadian woods are equal to southern pine. It is not, therefore, on account of its superiority that southern pine is used in Canada to so great an extent, but because of the sacrifice prices at which it is offered, which do much to demoralize lumber prices in Canada. The statements of the "American Lumberman" on the subject are as follows:

"During the last few months there has been much discussion as to the importation of lumber from Canada and the balance of trade in lumber between that country and this. Lumber manufacturers of the United States have been asking for a retention of the \$2 duty on rough lumber, on the ground of Canadian competition, while on the other hand, some Canadians have asked that their industry be protected against inroads from the United States by the imposition of a duty, whereas lumber is now on the Dominion free list. Those who have been urging Congress to remove or reduce the duty have pointed to the fact that the United States ships a considerable amount of lumber to Canada, as evidence that we do not need protection against the Canadian product, some saying without qualification that our exports to that country prove that we can meet Canada in the free competition in her own markets.

"In view of these counter claims, the facts as to this interchange are enlightening. From the annual summary of imports and exports issued by the Bureau of Statistics at Washington, we have taken the figures showing quantity and value of both imports and exports for a series of years and placed with them the value by the thousand. The result is shown in the following table:

Imports of Sawed Lumber into the United States from Canada.

Year	Quantity M. feet.	Value \$	Value M. feet.
1904	585,194	8,729,135	\$14.92
1905	704,956	10,714,417	15.20
1906	944,153	14,589,864	15.45
1907	921,873	15,828,477	17.17
1908	779,645	14,953,158	19.18
Totals	3,935,821	\$64,815,051	
Average value a thousand feet			\$16.47

Exports of Sawed Lumber from the United States to Canada.

Year	Quantity M. feet.	Value \$	Value M. feet.
1904	176,079	\$3,519,771	\$19.99
1905	158,775	3,275,977	20.63
1906	101,958	2,575,077	25.26
1907	172,065	4,957,237	28.81
1908	149,355	4,261,699	28.53
Totals	758,232	\$18,589,761	
Average value a thousand feet			\$24.52

"Comparing the last columns of these two tables a startling difference in values is found. For the series of five years the average value of our exports to Canada was \$24.52, while the average value of the lumber we imported from that country was \$16.47. To the lumbermen these figures indicate that there has been no real competition of American lumber in Canada. That country has shipped to us comparatively low grade stock, while we have been shipping to Canada relatively high grade material; also our exports have been small compared with our imports. Our largest importations were in 1906, though prices were not as high as in the following year. Our exports in 1906 were the smallest in many years, owing to our own high range of domestic prices. The top notch of values was reached in 1907, so far as exports are concerned, with a slight decrease in 1908. On the other hand, we paid much higher prices in 1908 for our importations from Canada than we did in 1907.

"The inference from these figures is that in 1908 our own low prices and our surplus of product discouraged the importation of a certain percentage of the low grade stock that had been coming from Canada. Our

own common and cull lumber was so abundant and cheap that a certain portion of the Canadian stock was kept back. We imported a large amount, but it averaged higher in grade than it had in previous years.

"It will be remembered that during 1908 there was no such reduction in the price of the better grades of white pine as there was in the lower grades. Consequently, our importations of those upper grades seem to have continued at probably their former volume, and while we were presumably paying no more to Canada than we were during the previous year for these grades, the greater proportion of them in the total import had the effect of raising the average price by \$2 a thousand. On the other hand, our own lower domestic prices in 1908 as compared with 1907 lessened slightly the export value of the stock we shipped to Canada.

"These figures, which have the authority of the Government back of them, show plainly enough that the lumber we import from Canada enters into our own competition, so far as the lower grades are concerned. When we sell lumber at cost or less, even the Canadian low grades are unable with the handicap of the duty to compete to their usual extent; but our shipments to Canada are of a better class of stock and of kinds which are needed in the Canadian markets and which the Canadian industry can not supply.

"It is well known that the hardwood supply of Canada is light. There is considerable maple, some ash, and nearly all the hardwoods are represented; but most of the leading woods, especially oak, are not to-day found in Canada in anything like the quantities necessary for her own consumption, hence she buys these woods in the United States. She buys them, not because she loves this country, but because this is the necessary source of supply of materials that Canadian industries must have.

"Another class of material which enters largely into our exports to Canada is composed of longleaf pine in timbers, heavy framing stuff, flooring and material for factory use. To a certain extent Norway pine, which is fairly abundant in Canada, meets the needs for structural purposes, but it is not so strong as longleaf, nor can it ordinarily be secured in such large sizes. In Douglas fir the Dominion has a wood which would answer for such uses, but it is so remote from the chief consuming districts, while the yellow pine can be laid down by water on a comparatively low rate of freight, that the latter finds a large sale. For heavy construction work yellow pine is sold as far west as the head of the Great Lakes occasionally, while it is a commonly used material for special purposes in all the eastern provinces. Many of our readers may remember that the caissons used in constructing the piers of the Quebec bridge were built of longleaf yellow pine. About 7,000,000 feet were used.

"The great bulk of our exports to Canada, therefore, are of a sort which she does not have, but needs; and so far lumbermen of the Dominion who have been asking for a duty upon lumber imported into Canada have not been successful in their pleas to the Government or to Parliament. On the other hand, our imports from Canada are of the same kinds of timber and class of stock, for the most part, which we manufacture in the United States and have in abundant supply. Since the largest part of the importations are white pine, the average price indicates that, in spite of our duty, the shipments average a rather low grade. The better grades of white pine are so light in supply in both countries in comparison with the demand that the duty amounts to little and an interchange takes place without injuriously affecting either market; but in the lower grades the competition of Canadian mills with the United States is direct and unmistakable."

The annual meeting of the Canadian Lumbermen's Association will be held in Ottawa on Wednesday, May 19. On the evening previous, Tuesday, May 18, the annual banquet will be held at the Laurentian Club, Ottawa, and many prominent lumbermen from different parts of the country will attend. On Monday, May 17th, the freight rate complaint of the lumbermen will be continued before the Railway Commission. The annual meeting on Wednesday, May 19th, will commence at 10 a.m.

In order to preserve the forests, the public service commission, at Albany, N.Y., has issued an order requiring that all railroads traversing the state forest preserves in the Adirondacks must use oil-consuming locomotives during certain periods of the year. The time fixed by the commission is during the months from April 15th to November 1st, between the hours of 8 a.m. and 8 p.m. The order goes into partial effect this year and provides for the complete installation of the oil burners by April 15th, 1910.

THE BRITISH COLUMBIA TRADE

Shingles Higher at Vancouver

Vancouver, B.C., May 8.—Shingles are king just now in Vancouver. The Canadian prairies and eastern Canada are actively ordering at a base price of \$2 for "clears." This price does not apply to the United States, where shingles of the same quality are much lower in price. This is the harvest time for Canadian shingle makers. They realize it and are making the best of it. Sixty-five per cent. of all the shingles sold are now going to the prairies, and all the mills are busy.

It is at this time of year, and this time of year alone, that the United States markets do not regulate prices in British Columbia. When the spring rush is over, as a usual thing prices conveniently firm up on Puget Sound, and enable the British Columbia mills to trade in that market.

Lumber conditions are much improved. Logs are plentiful and somewhat easier, and while rough lumber is still low in price, higher grades are holding their own and there is a good demand for them.

There is still a good deal of agitation here over the assertion that some irresponsible shingle dealers in Washington State are putting B.C. marks on inferior grade shingles. It is thought by manufacturers here that the Puget Sound mills should take this matter up themselves, and assist the British Columbia mills in preventing these brand manipulators from casting discredit on the industry. The mills are seriously considering, it is said, copyrighting their brands, so that it may be made an offence against the laws of Canada and the United States to copy such brands.

Improvement on the Prairies

Speaking of the lumber situation, Mr. J. C. Shields, of Regina, says: "Conditions in the prairie provinces are better than they have been for the past two years. If the crop is only an average one the demand for lumber this fall will be the largest since 1906. The demand at present is excellent, but prices are at a figure which leaves no profit for the coast mills. The acreage under cultivation in Saskatchewan will be double that of last year." Mr. Shields is manager of various lumber companies, including the Independent Lumber Company, who are the largest distributors of lumber in the new provinces. Recently he has branched out and the companies he organized with a paid-up capital of \$200,000 will own three sawmills in British Columbia. One of the new corporations is the Pitt River Lumber Company, whose mill near Westminster Junction will be completed in less than two months. It will have a capacity of 70,000 feet daily. The Sovereign Lumber Company, another of the corporations controlled by Mr. Shields, is building a sawmill at Sicamous. It will have a capacity of 50,000 feet per day. The third one is the Monarch Lumber Company, whose plant at Savona recently went into commission. It is cutting 70,000 feet daily. The output of the three mills will be shipped to the prairies.

Dry Weather Causing Fires

The extremely dry weather during the past month has caused a large number of fires to start in the limits, and in several instances lumbering plants were endangered. In Chemainus district, on the 3rd inst., one of the logging trains of the Victoria Lumbering & Manufacturing Company was held up owing to the burning of a bridge, and when the train crew backed up to the next siding they found that the fire had come in behind them. The heat and smoke became so bad that they had to abandon the train and make their way through the woods to Ladysmith. Another engine was sent after the train the next day; the locomotive was found uninjured, but all the logs and trucks were more or less damaged, and a good car at the tail end was destroyed.

The Yale-Columbia Lumber Company suffered a severe loss on Tuesday, May 4th, when their fine plant at Wesley, B.C., about 25 miles west of Nelson, was destroyed by a fire which started from the refuse dump. The loss includes the mill, valued at \$50,000, the stock of lumber on hand, worth an equal amount, as well as all the employees' houses and other buildings, the only structures left being the office and cook-house.

The North Pacific Lumber Company's mill at Barnet, B.C., ten miles from Vancouver, was completely destroyed by fire on May 6th. The fire broke out shortly before midnight, and was soon beyond control. The engines from Vancouver and New Westminster were on the spot as soon as possible, but could only save the dry kilns and the lumber yards. The damage amounts to \$250,000. The mill was one of the largest on the coast and had a daily cut of 100,000 feet. Six C.P.R. cars loading lumber were burned.

On the 26th of April last the Fraser River Lumber Company broke its own, and perhaps the world's record, for a single day's cut. The total amount of lumber handled during the ten hours was 418,460 feet.

Canadian Pacific Sulphite Mills nearly Completed

The Canadian Pacific Sulphite Company, a corporation composed mainly of English capitalists, expect to have one of the finest pulp mills on the American continent in operation at Swanson Bay, about 150 miles south of Prince Rupert, in July next. Work has been in progress for the past eighteen months, and the staff of men was largely increased later, in order that the opening might not be delayed. The machinery is being purchased wherever the best can be produced. The steamer "Ena" took up a consignment on her last trip, including five steam digestors from the United States, which will be used in the preparation of the pulp. There was also a roller which came from Scotland a few weeks ago.

The pulp will be manufactured from spruce and balsam timber, of which the company possess large holdings contiguous to the mill. The firm also operate a large sawmill plant, in which they manufactured all the heavy timber and lumber required in the construction of the various buildings. At present the sawmill is being operated from 7 a.m. to 9 p.m. cutting lumber for Prince Rupert contractors. The pulp mill will be run by water power generated from the waterfall close by, but steam will also be necessary in the manufacture of the pulp.

A new wharf is now under construction, which, when completed, will be over 700 feet in length, the largest north of Vancouver. This, with the one first built, will give over 900 feet of dock room. It is also the intention of the company to erect a hotel containing 70 rooms, for the suitable accommodation of the men employed and the visitors who will wish to spend a day or two inspecting the plant.

Many Cargoes for Lumber Vessels

The British ship "Cissie" is loading lumber at the Hastings mill, Vancouver, for the Australia market.

The opening of the summer logging season has started with a rush. A coastwise steamer is being crowded almost daily, during May, with lumberjacks and supplies.

The American barkentine "Alta," Capt. Thorgel, which has been at anchor at Vancouver port for about six months, has secured a charter. She will load lumber at Hastings' Mill, Vancouver, for Iquique, Chile, South America.

The "Inversay," a large steamer of the Australian Mail Line, was due to reach Vancouver May 15th from Guaymas, Mexico, to load lumber at the Fraser river mills for Sydney, Australia. She will take but a million feet, filling out her cargo with general merchandise.

The steamer "Century" recently completed her lumber cargo at the Fraser River mills, and will be followed by four other ships of this line, each taking a million feet of lumber. One of these will arrive about the first week in June. The "Puritan," another vessel of the line, at this writing is loading 2,500,000 feet at the Fraser River Lumber Company's mills for Melbourne, Australia. The German barkentine "Schurbeck" will leave the Fraser river mills lumber laden for California about the first week in June.

At the Hastings sawmill docks of the British Columbia mills five ocean going vessels recently took on cargoes of lumber and square timber at the same time. The bark "Rowena" had a charter for a United Kingdom port; the bark "Addersley, for Australia; the bark "Procyon," for Chile; the sailing vessel "Euphrosyne, for South America, and the steamer "Indravelli, of the Alley (New Zealand) Line, took on part of a cargo. The latter vessel was unable to secure dockage room, and the lumber was taken out to her on barges.

Advices received from all lumber districts in western Washington and Oregon indicate that the majority of the larger mills of both states will not operate more than 48 hours per week during the month of May. The first general curtailment of the lumber cut followed the recent meeting of thirty of the largest mill owners of Idaho, Oregon and Washington at Seattle, at which time a general curtailment was discussed. Lumbermen generally express the opinion that there will be an increased demand shown by the middle of July.

There are some 25 or 30 sawmills in and about Cranbrook, and there are still vast quantities of fir and tamarack, insuring an unlimited supply for many years to come.

Two British Columbia loggers named Perry and Baker obtained judgment some time ago for \$1,000 and costs each, against McKinnon and the Coast Timber & Trading Company, as damages for false arrest. The money has not been paid, and Messrs. Perry and Baker have made an application in Supreme Chambers, Vancouver, for the forced sale of 140 timber licenses held by defendants, worth many thousands of dollars, in order to satisfy the judgments.

Hoo-Hoo Celebrate at Vancouver

Enthusiastic Gathering to Honor the "Great Black Cat" — Many Kittens Received

A large and representative gathering of lumbermen filled O'Brien Hall, Homer street, Vancouver, on the evening of April 23rd, the occasion being the annual rally of the Concatenated Order of Hoo-Hoo, in the honor of the "Great Black Cat." The Concatenation was perhaps the most successful yet held, which is conveying no mean praise, as past events of the kind reached such a high standard that to have equalled—if not eclipsed—all past records is a tribute to the popularity and zeal of P. D. Roe, Vicegerent Snark, and to the hard work of the other officers of the association.

More than one hundred members attended, among whom were many well known Hoo-Hoos from Seattle, Portland, Bellingham and Everett, who rendered great assistance in the work of trimming the claws of the bunch of thirty-five "Kittens" who presented themselves for initiation into the mysteries of the order. Prominent among the old members of the Order present were A. H. Patten, a former member of the Supreme Nine, and Pacific coast manager for E. C. Atkins & Company; also W. C. Birdsall, British Columbia representative of the same firm.

The following officers of the Concatenated Order of Hoo-Hoo were present: P. D. Roe, Vicegerent Snark; Abner Blair, Senior Hoo-Hoo; T. F. Patterson, Junior Hoo-Hoo; Arthur Hendry, Bojum; Ivan D. Smith, Scrivenoter; M. M. Harrell, Jabberwock; L. E. Snell, Arstacasthun; John Ross, Arcanoper; W. C. Birdsall, Gurdon.

The initiation of the new candidates and their transformation into full-fledged Hoo-Hoos occupied considerable time, and it was noticed that they became quite thirsty before the proceedings terminated. They exercised their lungs in the Hoo-Hoo cry for water so vigorously that all hearers were impressed with their caterwauling powers. Following are the names of new pilgrims admitted into the realms of Great Hoo-Hoo:

Vancouver—A. J. Sloan, Arthur E. Howard, J. V. McNaulty, Alfred Burton, P. G. Sills, Albert G. McKenny, S. D. Smith, William E. McGirr, Roland D. Craig, C. A. Nelson, Cyrus M. Flanders, Howard Barker, John Hendry, F. P. Nelson, Earl D. Horton, Thomas H. Tait, I. R. Turney, W. O. Pinger, W. H. Morrison, Samuel S. Hayes, George McAfee, C. E. Strong, J. I. Smith, J. L. Raesch, Douglas McPherson, C. W. Brandon, C. E. Lang; Port Moody, John H. McLean; Winnipeg, J. F. Cameron; Everett, C. E. Broadbent; Montreal, R. J. Younge; New Westminster, W. S. McLean; Victoria, H. W. Fraser; Tynhead, J. G. Robinson.

The Banquet.

The banquet at the Commercial Hotel was a very tasteful affair. The long tables were decorated profusely with carnations, palms and greens. The menus were original designs in green and gold, embellished with the greeting at the top of the cards: "Hail to the Great Black Cat." The success of the arrangements was due to the committee, consisting of L. E. Snell and Fritz Rathgaber. No toast list had been arranged beforehand. Snark Roe therefore presided over an extemporaneous affair, with honor to himself and the order.

T. F. Patterson, the first speaker, uttered a friendly word for the American visitors at the Concatenation, and said: "I can't understand why we should recognize a boundary line at all, and it wouldn't surprise me a bit if some day the entire continent from the north to Mexico and to the North Pole will be one country." He stated, however, that he was not prophesying as to whether Canada would take in the United States or vice versa.

A. S. Porter, responding in behalf of President Taft and the United States, said: "'Big Bill' Taft is there, and let us hope he will remain there. From the start he has made he is doing well. In my opinion there is no border line between you and us—we are all one."

Mr. J. W. Hackett dwelt at length upon the advantages of fraternal societies, and believed that meetings such as these had a splendid effect. When the Seattle Fair came on the British Columbia Hoo-Hoo would all go over to the Seattle Hoo-Hoo House and help their friends at the Fair.

Mr. William E. Tytler, whom the chairman designated as the man who sent a million shingles to the United States, said that this story was told to the press, which always loved to multiply. As a matter of fact, British Columbia manufacturers had only sent a small portion to the United States. Of a total of nine million shingles exported in 1907, British Columbia had exported less than four per cent. The newspaper story was probably an endeavor on the part of the press to remove the tariff, but personally he did not think matters were ripe for such a move as yet. Canadians did not wish to see their timber ruined, but in the course of a few years they could meet the Americans on an even basis.

Mr. T. Cunningham, as a native of British Columbia, was called on to speak for the allied interests. He pointed out how the supply houses were essentially an allied interest. Lumbermen were his friends; their

interests his. He thought that entertainments such as the one they were enjoying established good fellowship between supply man and mill man.

To speak on behalf of the transportation companies, Mr. W. P. Lockwood was called upon. He was in the habit of visiting British Columbia once a year, he said. Nine years ago he came for the first time in J. J. Hill's interests to British Columbia. Railway success, he said, depended greatly on forest products, and he was sorry the companies had not appreciated that fact more, as the controversy over rates demonstrated, but he expected a different policy in the future. Several lines were coming to Vancouver. He was confident that Vancouver would have at least one, if not two, additional railway lines.

Speeches were also made by Clarke Evan and J. Hendry, and several good songs were contributed by Mr. A. Thompson. Speeches for "The Ladies" and "The Press" were made, and at the conclusion a resolution was passed that a telegram be sent to ex-Snark Moody, notifying him of the success of the Hoo-Hoo Order in Vancouver, which he did so much to organize. The gathering broke up at about 2.30 a.m.

None of the devices for automatically registering the cut of a saw-mill have proven a success, says an exchange. A practical device would be valuable, but there are many difficulties in the way.

This is the season for lumber association meetings on the Canadian side of the line. There are a great many manufacturers who do not attend these meetings, and owing to the associations denying the press the privilege of publishing the report of the meetings, a great deal of the good they otherwise would do, is lost. In the United States the accounts of the proceedings are published in full, and those who do not attend can get much advantage from reading the reports.

On the United States side of the line, it is not usual to issue drafts on customers for the purchase of lumber. In fact in many instances it is considered by some as a reflection on the integrity of the buyer. In the Canadian Northwest it is the usual practice to make collection by draft immediately upon the shipment of the goods, and this method is accepted as a matter of course by the dealer.

Interesting B. C. Short Lengths

Work is being pushed on a logging railway being built by the Brown Logging Company at Scow Bay, B.C.

Much activity is developing in the Squamish valley timber region. Several important transfers of limits have taken place lately, and sites have been staked for two sawmills, which will be in operation this summer. The firms interested will send logging gangs into the limits in the course of a few weeks.

At Revelstoke, B.C., a new sash and door factory is in process of erection at the corner of Third street and Connaught avenue. The machinery will be of modern type. The enterprise is being fathered by R. J. Watson, formerly Dominion Timber Inspector, who recently arrived at Vancouver from Burke's Falls, Ontario.

The Port Gamble sawmill of the Puget Mill Company, near Port Townsend, Wash., closed down on April 24th for an indefinite period because of the dullness in the lumber market. This is the first shut-down of the plant since it was built 56 years ago. The operations of the company have been closely identified with the pioneer development of Puget Sound.

The Emerson Lumber Company, Limited, of Port Moody, are erecting a new sawmill and shingle mill at Eburne. The building is well advanced, and will be in operation shortly. Messrs. Roe, Emerson & Abernethy, the members of the firm, are pushing, enterprising men, who know the lumber business thoroughly, and their extension of business is a strong proof of the improvement that is noticeable in the lumber trade of the province.

Work on the new Howe Sound Railway has been started; it will be seven miles in length, and will cost \$275,000. The present object of the railway is to take timber out of the lower Squamish valley, where some of the best timber in British Columbia stands. Many previous attempts have been made to log this timber, but have ended in failure owing to the inaccessibility of the timber land and the difficulty of getting the logs down to salt water.

The Adolph Lumber Company, at Elko, B.C., whose mill was burned in July last, have their new plant up and running, the first log being put through the saws on Monday, April 26th. The new mill is said to be one of the most up-to-date and best equipped in that part of the country, the capacity being about 50,000 feet of lumber per day. Summer logging will be carried on all season in the Goat Mountain limits camps. A pole road is under construction, and boat gangs will be sent in very shortly.

THE WOODWORKER

Architectural Designs in Woodwork

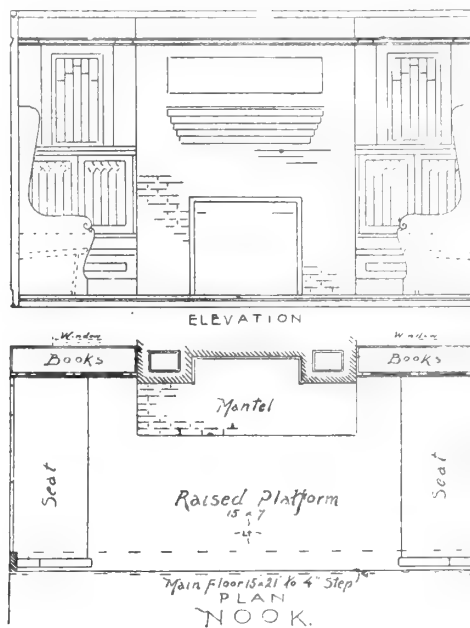

The frequent changes introduced in styles of finish cause many difficulties in the conducting of a steady mill business and any means of overcoming them would be a source of great advantage. In a recent issue of the "Woodworkers' Review" the subject was interestingly discussed by C. Bryant Schaefer as follows:

One of the common types was designed by woodworkers to show their skill; every kind of shape and cut they could think of was spread upon the inside and the outside of a house. This is called the vernacular. Another kind is the Eastlake. Long beads are run through every surface, usually in groups of three or four. Besides these there is the Queen Anne; and finally a new name for every slight change that could be invented. When a plant is fixed to turn out a lot of work in the most approved style and everything is running nicely, it is called upon to

many accessories to the usual house plan. As this demand is bound to increase with time we illustrate some examples of this artistic architecture. Builders are not only safe in following it up, but will find it worth while to encourage its development in their field of business.

For instance, a house is built to satisfy the necessities of the occupants. Material is used economically. Arrangements are labor saving. The labors of housekeeping are cut in half. In consequence people are employing their spare time in many new and pleasant ways. In meeting these requirements architectural work becomes artistic. This is the change that is going on wherever builders are introducing the modern conveniences.

Mill workers and builders should urge the advantages of special architectural features, such as alcoves, nooks, balconies, galleries, house plant windows, sunning rooms, tool rooms, home workshops, attics, play

make changes. This increases running expenses unexpectedly, and in disgust it is often said there is not only the Queen Anne style, but the Mary Ann and every other kind of Anna! These faddish styles of woodwork are decorative, and will continue to change wherever there is a demand for novelty. But they make bother and, as a rule, do not give permanent satisfaction.

If the mill men and carpenters will understand the circumstances they can properly advise their customers. The sudden changes they demand are soon out of fashion. This surface decorative finish of woodwork changes all the time; and it is a disappointment to find one has something no longer in style. With it not only do the owners have to sell or rent cheaper in case of commercial property; but a large plant is often driven to putting its product on the market at ruinously low prices. These troubles can be avoided by sticking to architectural methods. A good style of finish can always be made by following structural lines, and making them serviceable and strong. This is always the safest course to recommend. Of course, patrons are never convinced until they know why. Therefore the workman who understands this subject is sure to become valuable when it comes to the designing of mill work.

Architecture also becomes artistic in its own way. Artistic work is in demand by people of culture. They need all the conveniences of life. They have social duties to perform. This makes a demand for

rooms, and places on which to linger in hallways, on landings and similar places; cozy corners for reading, etc. There is something possible for everyone in a family, for every occupation, for every taste. These features are just as evident whether a building is finished in the rough or with imported veneers. They constitute the art of architecture. To make people appreciate them is to increase the demand for mill products. But owners of houses have to be taught why they should go to these additional expenses. They will then see that the artistic house saves the occupants wasteful outside expenses, when recreation is needed.

Perspectives and sketches help the argument of the builders. It is these sketches which are the forerunners of developments. Always different, full of suggestiveness, they represent what the artist knows to be agreeable to the people. They are studies in science and pleasure and are the foundation of art in building. Such was the importance of the sketch clubs which many builders can remember. Be sure to have one or encourage one wherever greater building opportunities are desired. A very large room instead of the combined parlor and library is one of the latest ideas in home designing. It is called a living room. The features belonging to the parlor and reading room are retained but disposed about the room in a variety of ways, together with other conveniences that make the room agreeable to all the members of the household.

One of our illustrations shows one end of a 30-foot room with a

raised platform. Built-in seats occupy opposite sides with book shelves at hand. Small windows and a mantel breast complete the group. It is not only the decorative possibilities which are considered, but also the comfort and conveniences of persons who dispose themselves in this nook. It presents an opportunity for a complete change of habit in comparison with the rest of the rooms.

Another place that can be enlarged on to advantage is the stair landing. If it has a balcony effect, as in the design shown, so much the better. It should also be widened to make room for a piece of furniture. It is scenic in effect. It invites one to linger; makes a variety in a house.

The design for an archway presents a good vista. More than that, the nook-like seats are inviting. A shelf overhead makes deep jambs possible. This secures a strong substantial piece of work. The pockets of the doors are the same as usual. The manner of finishing the jambs is in the classic style. At the same time the detail does not have to be a mechanical copy, as is often the case.

It will be noticed that the columns are a little different than usual. In wood work there is no need for a capital that was designed to support a stone wall. The stiff flutings of a marble shaft do not need to be copied in woodwork, where a multitude of graceful details can be cut with ease. There is no reason for making separate pieces for shaft and capital. The wood does not split sidewise. The grain runs up and down and is wholly unsuited to a band around the neck. The shelf over the opening makes a good soffit, the seat a good base. They are structural features as well as useful for furniture.

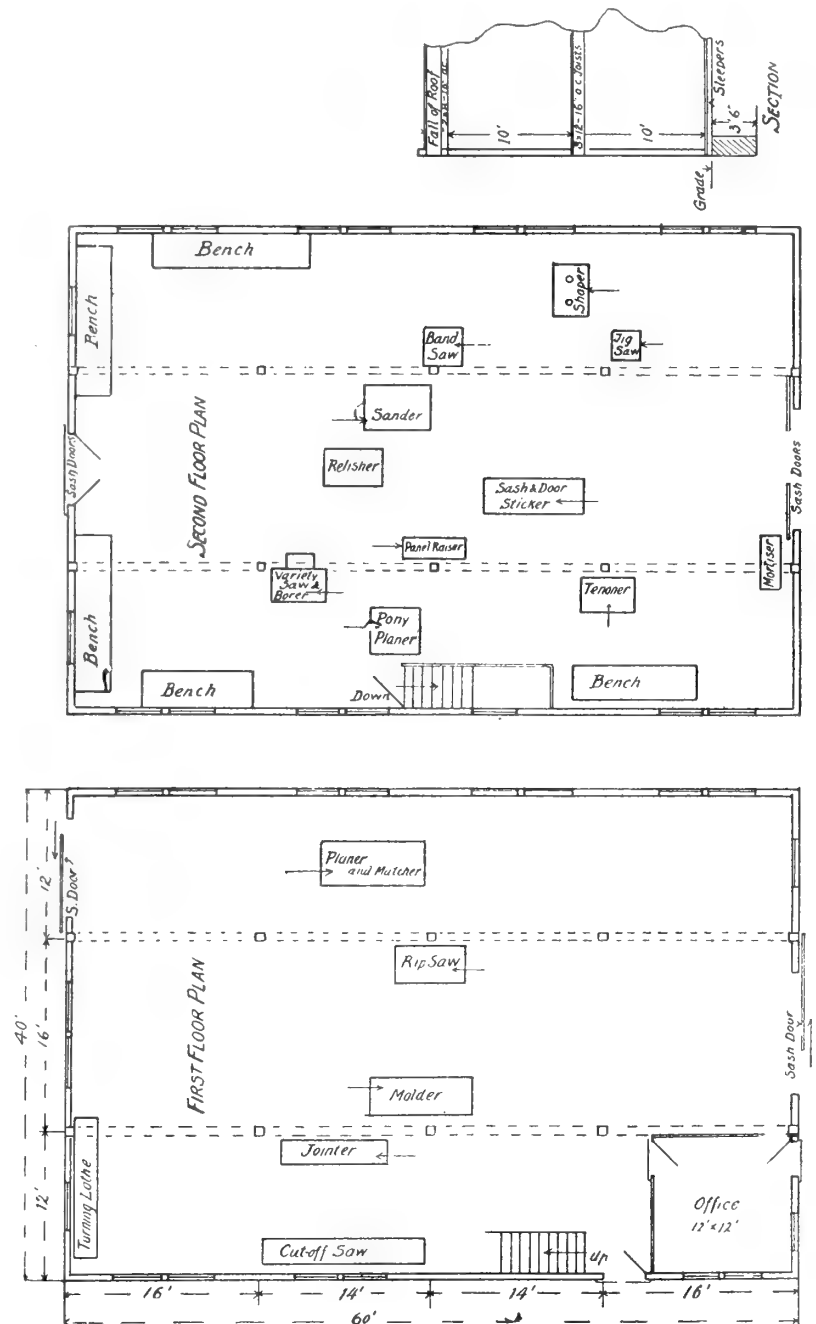

It will be seen from this comparison, between the changing decorative fad of the day and useful building features, what architectural mill work really is. Architectural art concerns itself with the movements and occupations of people. The demand for it in the right way is increasing every day.

Proposed Re-organization of Imperial Mills

Chicago capitalists are reported to have offered in the neighborhood of \$1,250,000 for the property of the Imperial Paper Mills Company at Sturgeon Falls, with a view of taking it over and straightening out the company's affairs. There are understood to be first and second mortgage bonds on the property to the amount of \$2,250,000, and the claims of unsecured creditors are about \$400,000 additional. The Quebec and Sovereign Banks are said to have claims of \$750,000, secured by liens on pulp wood, bringing the total indebtedness to \$3,400,000. Assuming that the banks are secured, the residue is \$2,600,000. The acceptance of the Chicago offer would mean the devotion of money to paying off bondholders, comprising merchants and manufacturers in all parts of Ontario and Quebec, while unsecured creditors maintain they would get nothing. These accordingly have appealed to Hon. Frank Cochrane, who has charge of the province's timber policy, for protection. They ask the Minister to decline to renew the license for the company's pulpwood limits unless satisfied that a reasonable measure of justice has been meted out to all interested parties. Mr. Cochrane is investigating the matter.

Plans for Two-Storey Woodworking Plant

The frame woodworking plant illustrated herewith is a two-storey mill, 40 x 60 feet. The sketch was contributed by a correspondent of the "Woodworker" recently. The plan provides for a concrete foundation wall, to grade; a stud outside wall of 2 x 6 inches, set 16-inch on centres, with a double plate, joints well broken, under the joists of the second floor, which are 3 x 12-inch, set 16-inch on centres, as indicated. In a cold climate the outside should be sheathed diagonally and covered with siding, and paver between. The floors are of 1 3/4-inch plank, s.l.s. and 2s., the first floor being nailed to sleepers of 4 x 6 chestnut or locust; or they may be any native structural wood treated with wood preservative.

The design is arranged for electric installation, although the same arrangement, with very few exceptions, will apply to any application of power from a line shaft. It will be noted that the heavy machines on the first floor are roomily placed and are get-at-able. They are also arranged with a view to the least possible handling of the stuff in process of manufacture.

The second floor is designed for doing general mill work, or it may be used for a specialty line by substituting a few machines for those not required. It will be noted that all work progresses towards the finishing department, from the time it is started until it is assembled, and that there is the least possible handling and no carrying of stock until finished.

There is ample room for a small elevator, if desired, for taking up cut-up stock and bringing down small articles when completed. The large outer doors provide good ingress for loads of lumber below, and egress for the finished articles from the second floor. Hanging platforms at the upper doors will greatly facilitate loading from above.

The design is suggestive rather than finished, and may provoke helpful ideas from our readers, which will be gratefully received.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

Invention for Edging Machines.

Mr. D. McMartin, of Peterborough, is the inventor of a device for use on edging machines in sawmills and planing mills. Mr. McMartin's invention makes it impossible for the board or timber to fly back from the saws, and because of this it should be in use in every mill. Men have sometimes been killed and frequently injured by the material which was being "edged" flying back from the saws, and it is often a difficult matter to get men to work behind an edging machine because of the danger. By the use of "dogs" which operate on the rollers which hold the material when it is being sawn, Mr. McMartin has done away with this danger. The rollers are "cogged" at one end and the "dog" prevents them from reversing and letting the timber be thrown back when the saws are not just working as they should. Mr. McMartin is at present employed in the mill of the estate of A. McDonald in Peterborough, and

FIGURE-1 - SIDE VIEW.

FIGURE-2 - END VIEW.

Safety Device for Edging Machines.

his invention has been in use there for the past year. It is giving splendid satisfaction, reducing the danger to the man working behind the edging machine to a minimum. The invention has been patented in Canada and Mr. McMartin is making arrangements to bring it to the notice of the millmen of the Dominion. The cut, as shown, gives a good idea of how the device works.

Mr. McMartin has been thirty years in the sawmill business and during that time has seen many men injured. While working behind edging machines at Deseronto he saw a man killed as a result of the material which was being cut being thrown back from the saw. In actual work in a sawmill it has been found to work perfectly and its simplicity and effectiveness have won for it the approval of the factory inspectors.

Mr. McMartin's invention can be fitted on any edging or lath machine.

The machinery, including a 40 horse-power boiler, has arrived and is being installed in the new sawmill at Comox, B.C.

Of Interest to Wire Users.

The B. Greening Wire Company, Limited, Hamilton, Ont., have just issued an unusually attractive catalogue, or rather a series of catalogues, of their various products, comprising wire cloth, perforated metals, wire lathing, wire rope, wire chains, wire guards, counter railings, etc., the whole bound in one handsome volume for the use of their agents. Not the least interesting feature of the catalogue is the historical page. The name Greening appears to have been associated with wire for many centuries, the first needle factory in France being started by a Greening, and later in England pins and needles were made by one of the same family. Benjamin Greening came to Canada in the fifties and became one of the pioneers of the wire industry. At his death he was succeeded by his son, S. O. Greening, who built the new works, and is president of the existing company. The works of the B. Greening Wire Company are up-to-date in every respect, and cover an immense area, giving employment to about 350 hands, the pay list running up to \$3,000 weekly.

The catalogue is a handsome volume of over 400 pages, with special illustrations of the works and the different departments, as well as of all the various articles which the firm produces. The press work and typographical details are all that could be desired, the whole being bound in a dark green cloth, appropriately lettered in gold.

A Notable Exhibit of Belting.

At the recent Franco-British Exposition in London, Eng., one of the most noticeable among the buildings was one which represented entirely the interests of one man, whose products are to be found in all parts of the world. On the dome of the building was a large brass model of a "Camel," which gave a clue to the use of the building, as "Camel" calls to mind the name of Reddaway, and the well known "Camel Hair,

Camel Brand Belting." Inside the building there was a splendid exhibit of belts running and belts in rolls, ranging from leviathans of 60 inches wide to midgits of one and one-quarter inch. Mr. Frank Reddaway, the company claim, was the originator of all fabric belts, and the first to manufacture stitched canvas belting.

The "Camel Belting" which is so extensively used in mines, factories and mills, gives employment to thousands of hands throughout the world. It is manufactured in three countries. The Manchester mills are divided into many departments. In one department there may be seen the little baby engine which started the company. Alongside of this baby engine stands the gigantic modern engine, driven with "Camel Belting" which has not been touched for over fourteen years.

The Canadian warehouse of Messrs. F. Reddaway & Company is at 56 St. Francois Xavier street, Montreal, where Mr. Harrison, the company's representative, carries a large stock. Mr. Harrison counts among his customers Mr. J. R. Booth, of Ottawa, the greatest lumber operator in Canada, who has been using "Camel Brand" belting for 18 consecutive years. The list of customers also includes some of the largest pulp and paper companies in Canada, who find this brand highly satisfactory for their work.

"Camel Brand" is a solid woven belt. Having no plys, rubber or gum it will not open up and fall apart and the company claim that it will run equally well in wet, damp or hot drive. Like all other good things, it has imitations, to prevent the substitution of which upon buyers, the company have adopted a trade mark which is stamped on every belt, as a guarantee and protection.

The Canadian Fairbanks Company, Limited, with distributing houses at St. John's, Montreal, Toronto, Winnipeg, Calgary and Vancouver, have taken the agency for the Stickler Weedless Wheel Company, of Portage, Wisconsin. They will carry a stock of both bronze and iron at their supply houses at those places, and will fill all orders promptly.

It is said that the Canadian manufacturers have sold one billion shingles in the last year.

For Sale

Large Tract of Timber

The property of the Canadian Land and Immigration Company of Haliburton, (Limited)

There are large quantities of Railroad and other timber including Cedar, Hemlock, Spruce, Balsam, Basswood, Beech, Cherry-Birch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads. The company are prepared to sell this timber in blocks ranging from 2,000 to 10,000 acres or more if desired.

There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and are looking for a new location.

Maps and plans and further particulars can be had by applying to

Sale of Valuable Timber Limits

THE UNDERSIGNED ARE INSTRUCTED to sell by Public Auction en bloc, at the Russell House, Ottawa, on September 30, 1909, at 2.30 p.m., the following Timber Limits situate in Block A, Upper Ottawa, Province of Quebec, viz:

Berth 676 Licence No. 580 of 1908-09, south half Lot 16, Range 4, Block A, 25 square miles; Berth 677, Licence No. 581 of 1908-09, south half Lot 14, Range 3, Block A, 21 3/4 square miles; Berth 678, Licence No. 582 of 1908-09, Grand Lac Victoria, River Ottawa, 19 square miles; Berth 679, Licence No. 583 of 1908-09, south half of north half Lot 16, Range 4, Block A, 9 1/2 square miles; Berth 680, Licence No. 584 of 1908-09, north half Lot 16, Range 3, Block A, 15 1/2 square miles; Berth 681, Licence No. 585 of 1908-09, north half Lot 15, Range 3, Block A, 18 square miles; Berth 682, Licence No. 586 of 1908-09, south half Lot 17, Range 5, Block A, 25 square miles; Berth 683, Licence No. 587 of 1908-09, north half Lot 16, Range 5, Block A, 25 square miles; Berth 684, Licence No. 588 of 1908-09, north half Lot 17, Range 4, Block A, 25 square miles. Total 183 3/4 square miles.

These limits are all surveyed and are easy of access by a good roadway from Ville Marie to their location. They comprise some of the best pine and pulp wood areas in the Province.

Terms—10 per cent. of the purchase money to be paid down at the time of sale, and the balance in equal instalments at one (1), three (3) and six (6) months thereafter with interest at the rate of 5 per cent. per annum.

For further particulars and conditions of sale apply to the Royal Trust Company (Ottawa Branch), and to Code & Burritt, Solicitors, Carleton Chambers, Ottawa.

Dated this 31st day of March, 1909.

THE ROYAL TRUST CO., Ottawa,
Trustees of Sale.

Wood Preservative

WOULD LIKE TO ENTER INTO AN agreement for the exploitation of patent relative to a new and very effective process for the preservation of wood increasing its durability and resistance. Box 753 CANADA LUMBERMAN, Toronto. 11

Timber In New South Wales.

According to the recently published report of the Royal Commission appointed to inquire into the timber resources of New South Wales, the total quantity of commercial timber at present standing in the state, excluding timber growing on private lands, is estimated at 23,116,000,000 superficial feet, consisting of: Hardwoods: ironbark, 1,355,000 superficial feet; other hardwoods for milling, 8,668,000,000 superficial feet; for other purposes, 11,788,000,000 superficial feet; total, 21,811,000,000 superficial feet. Softwoods: cedar, 5,000,000 superficial feet; hoop pine, 230,000,000 superficial feet; other brushwoods, 150,000,000 superficial feet; cypress pine, 920,000,000 superficial feet; total, 1,305,000,000 superficial feet.

The commissioners state that, at the present rate of consumption, the quantity of hardwood timber suitable for commercial purposes, estimated to be at present standing on the forest reserves and other Crown lands of the state, will not last more than about 36 years, and that the supply of softwoods will be consumed in a little more than 20 years. Amongst other things the commissioners recommend that the present royalties on certain timber should be increased, and that the export of ironbark and tallowwood beyond the Commonwealth should be prohibited for a period of ten years. Recommendations are also made for the replanting of the most valuable timbers and for the protection of timbers at present standing.

Tests of Crow's Foot Elm.

The chief engineer for railways in Queensland reports that exhaustive tests of crow's foot elm are being made by his department. The director of forests, Mr. P. MacMahon, supplies the following statistics:

Crow's-foot elm is *Tarrietia argyrodendron* (Bentham). There are two varieties. One is dark in color and the other is light. The latter is found in the southern part of Queensland, where it is often called hickory, to which wood it bears a decided resemblance. The darker variety is found chiefly in North Queensland, where it occurs in great abundance, attaining a height of over 100 feet, with a long clean

barrel having a diameter of from 3 to 5 feet and sometimes more. The dark variety is also found in South Queensland, where, though quite a large tree, it does not attain the same size nor is it so plentiful as in the north.

The wood of the darker variety is very beautiful when cut in the radial direction, being of a light golden ground mottled with flakes of bright brown. The color changes as the wood is held at different angles to the light. It is now being used by the government railways for railway carriage fittings, on account of the beautiful color and grain. It is extremely elastic. I have had it made into trout rods and have tested it in several ways. A carriage woodware company at Nundah is using it for spokes, and it is being made into axe and hammer handles in a factory in Cairnes, North Queensland. I have had it tested at the physical laboratory of Melbourne University, when pieces 36 inches span by 1.96 inches breadth by 1.92 inches depth having a breaking load of 2,350 pounds, the modulus of rupture being 17,560 pounds. The weight per cubic foot is about 46 pounds. A piece 2 by 2 inches has held its form, after bending into a semi-circle, for two years. The ends were free. There does not seem very much to choose between the light and dark varieties, but the light is preferred by many as bearing a resemblance to hickory. I have known it to be used in a buggy pole in exceedingly rough country for eight years, replacing a pole of American hickory which broke.

It is necessary to state that great care is required in preparing this timber. It should be felled only in winter, cut up at once, and carefully stacked with access of air to each piece. The price of the dark variety is about \$6 per 100 superficial feet, sawn, f.o.b. Cairnes, and the light kind about \$5.35, f.o.b. Brisbane. I could procure exact quotations if I knew about quantities, conditions, etc.

The government railway construction works have steamed and bent some of this timber for roof sticks for carriages, but report that it cracked in the bending. The timber is procurable in the Cairnes district in large quantities, and logs are obtainable from which planks up to 36 inches in width may be cut. The lowest quotation at Cairnes, f.o.b., is about \$2 per 100 feet in the log, and \$2.50 per 100 superficial feet in the waggon at the sawmill, if sawn. The district engineer for railways states that "this timber does not possess the oily nature of the spotted gum, but loses its nature when dry, and becomes brittle." A large timber merchant sent a quantity to a boat builder in Melbourne for boat ribs, and when steamed for that purpose it kept its shape well. A cabinet maker uses it for making chairs, and finds it very good for that purpose; he has had logs up to 87 inches in girth.

FOR SALE

43 Steel Flat cars in perfect condition suitable for Lumber or Dry Kilns Standard Gauge. Capacity 5 to 7 tons, will sell cheap to a quick buyer.

Also New and Re-laying rails from 12 to 60 lbs. with Fastenings.

Review of Current Trade Conditions

Ontario.

The Georgian Bay mills are practically all running again now and considerable quantities of new stock are already offering. It is not expected, however, that this will have any ill-effect upon prices. Hemlock prices are reported to be stiffening a little. Manufacturers are asking \$1 a thousand more for green stock than they received for the dry. Scarcity of stocks is said to be the cause of this strength. The great amount of building under way and in contemplation is expected to absorb the hemlock stocks largely, and heavy Government contracts are looked upon to influence prices also. Country yards are reported to be pretty short of building material and are expected to come forward shortly with orders. In hardwoods, business is picking up somewhat, though it is not nearly so brisk as dealers would like. Some declines in prices are noted, caused mostly by the arrival of larger stocks on the market. White ash 1sts and 2nds, 1 to 2-inch at Toronto, is selling at \$55, instead of \$60, which was the price a fortnight ago. Birch is about \$1 lower on all grades. In quarter-cut oak the new stock will be coming in soon and although there is not a great deal on the market now, still dealers are ready to accept \$80 to \$82. For the next two or three months, however, quarter-cut oak is expected to hold up pretty well. Basswood is fairly firm, with a good demand. A quantity of basswood is going to Buffalo and the Eastern States at present. Soft elm is not moving very freely. There is not much of it to be had. Reports from Ottawa state that during the coming summer prices will be maintained at least as well as during last summer. Good white pine sidings have advanced \$2 since last month. Pine mill culls are growing firmer on account of the good building demand. Box lumber alone seems weak as a result of dullness in general trade. Shingles are quite scarce, especially the XXXX 18-inch white cedar, which sells at \$4.50 per thousand. Clear butt cedar and clear butt pine are selling at \$3.50 and \$3.25 respectively. XXXX pine shingles are worth from \$3.75 to \$4 per thousand. Lath are uncertain, though the demand is brisk. Prices generally have been strengthened by J. R. Booth declaring almost the same prices as in the spring of 1908. J. R. Booth's mills will cut probably 10,000,000 or 15,000,000 feet less than last year. There is an increasing demand for telegraph poles in the Ottawa valley. Prices, however, are still unaffected. Railway ties are about two and half cents higher than last year. There is a good demand for cedar ties.

Eastern Canada.

The most noticeable feature in the lumber business in Eastern Canada is the fact that the season has been an extremely backward one, the ice remaining in the rivers very late. This state of affairs is causing much anxiety for operators, who fear a light freshet and expect that a number of logs will be left in the woods. Spruce deals for export to the English market are very dull. There is no sign of a weakening in the market for spruce deals, but there are at the same time no developments in regard to them. The season, however, has been more busy than it was last year. In fact, optimism has taken the place of the pessimism which prevailed a year ago. Some of the larger plants have not yet begun to saw and the output to date is only about half the capacity. There is a shortage of stocks of "English" spruce deals, but it is expected that on account of light shipments during the coming summer stocks will increase. Prices are in the neighborhood of \$14.75 to \$15 per thousand superficial feet, f.o.b. steamer St. John. There has been a good demand for one-inch spruce during the last month and prices are stronger. Stocks are about average. Dutiable spruce boards are bringing \$12.50 per

thousand f.o.b. schooner St. John. There is a fair demand for spruce in New York but prices are irregular. At Boston a slight improvement is reported in the demand for spruce lumber, although business is not so active as it should be at this time of the year. Frames, 9-inch and under, are held at about \$25, though sales have been made recently at 50 cents and \$1 below this quotation. Random is in moderate demand with steady prices. Matched spruce boards are quiet at \$22 to \$22.50.

Great Britain.

Since Easter there has been a larger volume of business transacted on the f.o.b. market than many importers, especially buyers, seem disposed to believe. A better feeling continues on the London Stock Market and a belief prevails that matters are improving slowly. At Churchill & Sim's latest sale, broad 1st Montreal pine regulars made £33, with the 10 and 11-foot all to one buyer at £29 15s. The 3x11 made £31 10s. for regulars, £29 for the shorter lengths, and 2nd 2-inch going at £19 5s. for the 11-inch and up, and £16 5s. to £16 for the narrow widths. 3x9 3rd Montreal regulars made £14 5s., the 8-inch £12 15s., and 7-inch £12 10s. Prime clear Oregon made 2s. 2d., unsorted going at 1s. 6½d. for 4x12 and up, while the 3-inch went at 1s. 5d., and the 5x5 prime unsorted made £13, and the 4x4 £12 10s. St. John birch plank made 1s. and 11½d. At Liverpool the market has remained quiet with perhaps a little more enquiry for special lines. The spruce deal market is unchanged, with a probability that prices will become firmer. On account of the conclusion of the shipments from St. John it is expected that the season will be somewhat later than formerly. The demand for spruce deals at present is not great. Much of the shipments received from the liners are going into consumption. Stocks are becoming reduced, especially 3x7. Scantlings in all sizes are very scarce. 3x11 are scarce, especially anything over 14 feet. 2½x7-inch are also scarce in most places except Liverpool. At Manchester there has not been much improvement and merchants are buying mostly from hand to mouth. The imports at Bristol during the last few weeks have been quite extensive and it is hoped that they indicate a period of brisker trade. At Glasgow there is not much demand for spruce.

United States.

At Chicago, trade has been rather quiet during the past fortnight. Prices for number 2 common and better pine are well maintained, but the lower grades show an easier tendency. The fir market at Chicago is not very satisfactory on account of the yellow pine competition. Coopersage shows little change. Red cedar shingles have advanced five cents during the past week, the demand being good. Number 1 white cedar shingles are also in good demand with a tendency to advance in the better grades. The demand from the country yards is increased. There is a fair demand for No. 1 hemlock lath at about \$3.90 in Chicago. Lath generally are steady. In New York, the demand for northern pine has improved during the last month and prices have improved. At Buffalo, improvement is slow in northern pine. Some items in the upper grades are exhausted. Hardwoods at Buffalo show a firm demand for oak, a shortage of good chestnut and a dull demand for maple and beech. The demand for spruce and cedar at Buffalo is generally light and prices seem to be very fluctuating.

Plans are being considered by Washington State and Oregon State lumbermen for a further curtailment of the output of lumber from these states until the lumber market improves.

Market Correspondence

White Pine Growing Scarce at Ottawa.

Ottawa, May 12.—The situation in the lumber market shows signs that prices will be at least as well maintained during the coming summer as last summer. The upper grades of pine are sold up and good white pine sidings are bringing a couple of dollars more per thousand than they did last month. Pine mill culls are being so rapidly bought for building that this sort of lumber is also becoming firm, and the weakness in the price list seems now to affect only box lumber. This is attributable to the stagnation in general trade, which greatly curtailed the demand for boxes during the last year and a half. The fact that such a large manufacturer of shingles as J. R. Booth is nearer sold out than he has been for many years speaks well for the activity in that branch of the lumber trade. The XXXX 18-inch white cedar shingle is very scarce and easily brings \$4.50 per thousand. Cedar clear butt and pine clear butt bring \$3.50 and \$3.25 respectively, both being a little more plentiful than the upper grades. There are very little XXXX pine shingles made near Ottawa, but elsewhere they are worth from \$3.75 to \$4 per thousand. Different reports are heard regarding lath, but some of the biggest producers report them getting strong. The demand for the best sorts from across the border is brisk.

The lumber prices in the Ottawa valley have been strengthened by J. R. Booth declaring practically the same prices as in the spring of 1908. His mill will be a few weeks later than last year in beginning to cut at its full capacity, day and night. At present 1,500 men are employed. These will be increased to 2,000 with the starting of a small mill which is still undergoing repairs. Another 1,000 men will be required when night operations start, making 3,000 men, comprising the full force of mill hands and shippers. The management estimates that the delay in getting started at full capacity may reduce the season's output by 10 or 15 million feet. With the water power at its best in the early spring the mill loses immensely by any lost time. The drop in production in this mill, and other manufacturers are similarly affected, will contribute to stimulate trade probably more than anything else in sight at the present time. While the movement of lumber from the yards of J. R. Booth and the Shepard & Morse Company was considerable last winter there is, nevertheless, a larger quantity of lumber in the Ottawa valley than the trade requires under normal conditions. Since navigation opened several barges of deal and thin lumber have left Ottawa for Great Britain, the United States and Montreal. There has not been enough of this season's buying done yet, however, to insure a very great improvement on last summer, although the opinion among Ottawa lumbermen in general is that the situation is more promising than in 1908.

The demand for telegraph poles in the Ottawa valley is increasing with the large number of rural telephone systems being established. There is a scarcity of poles 35 feet long and up, but in lengths of 25 and 30 feet the commodity is plentiful. Electric railway companies and all users of poles in the cities take the long variety, which are growing scarcer and scarcer in the woods. The territory from Barry's Bay east to Arnprior supplies much of the demand, but where large orders have to be filled contractors have to go elsewhere for them. The steam railway companies are large buyers of the shortest sort of cedar poles, and consequently their consumption has little effect on prices. The cedar pole trade in the Ottawa valley is just recovering from two years of extreme dullness, so that the present revival has not yet had an effect on prices. Dealers give no regular quotations on poles because freight is an uncertain item by the time delivery is made. If the seasons of 1907 and 1908 had not been dull the present demand for poles would undoubtedly have advanced prices by this time. Railway ties have advanced about 2½ cents each since last season and present quotations are very firm. Cedar ties are in much demand by railways, but owing to scarcity of standing cedar, companies have to be satisfied with cheaper and less durable material. J. R. Booth is making a considerable number of ties for the Grand Trunk, and the Grand Trunk Pacific is taking many out of the Ottawa valley, but these are usually made at points near the portion of line under construction. It is more the increased cost of lumber that affects the prices, as jobbers are averse to taking contracts since shanty wages have become so high.

At the recent meeting of the Grand Trunk Company shareholders in London, England, the president announced that ties for the Grand Trunk Pacific were 100 per cent. higher than the ruling price a few years ago.

Large gangs of men are being sent from Ottawa and Hull to drive logs on the upper Ottawa and its tributaries. The ice on the northern branches of the Ottawa river is only disappearing now. The movement of logs on some of them will be late. No hardship will result from this, however, as nearly every manufacturer has enough of last season's logs in the river to supply his needs for several months.

The increase in building operations over last year is of immense advantage to local trade. The building permits for the last two months

approach nearly half a million dollars in the Ottawa district. This is \$100,000 better for April than in 1908, while March was twice as good as the previous March. In addition to this the Grand Trunk Railway Company have given assurance that they will construct their new hotel and station in Ottawa, which will cost a million dollars each.

A Backward Season at St. John.

St. John, N.B., May 10.—A feature of the local lumber industry is the remarkable conditions which prevail at the head of the St. John river in the districts where the much greater portion of the logs are cut which are manufactured at the local sawmills. The season has been a very late one; the weather has been very cold and backward, ice having formed very often during the nights of the first week in May.

The freshet in the river rose several feet and fell off again, although in the woods in Victoria and Madawaska counties and in the section of Quebec through which the St. John flows there are still several feet of snow. At the end of the first week in May the river is usually at its highest and stream driving is in full swing. So far this year the stream-drivers have done little else but wait for a sufficient volume of water to drive out their logs.

The situation generally is causing considerable uneasiness among local interested parties, as there is a strong prospect that the freshet will be a very light one and that consequently large quantities of logs will be left in the woods. The first of the "bank" logs have arrived during the past fortnight. These logs, which are cut at nearby points along the lower river are always first to reach the city mills, and, being far in advance of the up-river logs, usually command good prices. Spruce "bank" logs this spring are selling at from \$12 to \$12.50 per thousand feet delivered at the mill, two-thirds price for betters under ten inches at the top-end.

Another feature of great interest and importance is the serenity of trade in spruce deals for export to the English markets. There have been no developments of an important nature in this branch of the trade, although the situation could not be truthfully said to have shown any sign whatever of weakening. The season so far has shown much more life in this line than was the case up to this time last year. The tone is decidedly of a more optimistic nature and there is none of that lack of confidence which marked the spring of 1908 in the "English" spruce deal trade. An element in the lack of anxiety to dispose of stock is the fact that a number of the larger plants—owing to a scarcity of spruce logs—have not yet begun to saw, so that the volume of manufacture has been and is at present a little more than half the full capacity. Stocks of "English" spruce are also considerably below the average; 4,500,000 to 5,000,000 feet would cover all the available quantity, which quantity will no doubt, augment slowly during the next months, as shipments promise to be rather light during that period. To name a figure which would gauge the situation as regards price would be somewhat difficult, as the class of transactions which are being made are of an irregular nature and subject to many conditions. Under ordinary circumstances a specification containing 50 per cent. sevens and eights, 40 per cent. nines and 10 per cent. elevens and up would be quoted at from \$14.75 to \$15 per thousand superficial feet, f.o.b. steamer St. John. Since the withdrawal of the winter liners shipments have been light and freight rates are at rock-bottom. Charters have been made from St. John to the west coast at 30 shillings per standard.

The market for spruce, one-inch, has had a good month and local prices in this line are stronger than has been the case for upwards of a year. This line is a very important one to the local lumber manufacturers as the output is a heavy one and is practically all marketed in the New England States. A large quantity of spruce boards were wintered by local lumbering people, but the shipments during March and April were heavier than the ordinary and at present stocks are about the average, 1,250,000 feet being the total quantity of local holdings of one-inch spruce. The much greater part of these are dutiable goods upon which no quotations less than \$12.50 per thousand superficial feet, f.o.b. schooner St. John, would be made at the present date. The prevailing freight rate on spruce boards to Boston is \$2.50 per thousand.

Disastrous fires have been raging in the Kamloops district, B.C. Amongst the losses are two large sawmills, both of which were totally consumed. The big Carlin mill, located between Tappen's Siding and Notch Hill, was wiped out with a loss of \$75,000, as was also the Carrigan mill on Salmon river, valued at \$35,000. Three large bush fires had been raging for several days, and a terrific gale soon brought them in contact with each other. Barns and cattle also were destroyed in the conflagration. The fire extended for twenty miles and swept away half a million dollars' worth of property.

The man who says, "You cannot force business," does not know what he is talking about. If you don't go after the business, you don't get it. It's a constant hustle and push, when there are competitors in the field, and the persistent, wide-awake advertiser usually captures the lion's share. Moral—Advertise in the "Canada Lumberman" and become prosperous.

EDGINGS

Ontario

Odleifson & Thornsteinson are erecting a sawmill at Gimli, Ont.

J. A. McBurne, who has mills at Earlton and Carleton, Ont., is opening an office in Buffalo.

J. H. Lavelle and W. J. Hickey, are about to start work on a new box factory at Welland, Ont.

Duncan J. McCuan's sawmill at Fourth Chute, near Arnprior, Ont., was recently destroyed by fire.

Willard S. Kirkby was killed in Brigg's sawmill at Brockville by a blow received in attempting to change a belt with the aid of a pulley.

The Watt Milling Company have been granted a permit to erect a planing mill at the corner of Horma and Osler avenue, Toronto, to cost \$10,000.

George Lippert, of the Lippert Furniture Company, Berlin, Ont., proposes to establish a similar factory in Owen Sound, to employ about a hundred hands.

Argument on the application of the Canadian Lumbermen's Association to revise the freight tariff was postponed by the Railway Board until May 18th, in order to give the railways an opportunity of securing information required.

The Palmer piano factory at Uxbridge, erected a little over a year ago, and which has been unoccupied since the failure of that company, has been sold by the town to a company being formed in Toronto with a capital of \$25,000, to manufacture caskets.

The Serpent River Logging Company, Limited, Massey, Ont., capital \$25,000, has been incorporated to manufacture lumber, etc. J. Willoughby Robinson, of Buffalo; Ralph Loveland, of Saginaw, Mich., and G. J. Valin, of Sudbury, are provisional directors.

The London, Ont., City Council passed a by-law exempting the Globe Casket Company, whose factory was destroyed by fire last month, from taxes on all over \$17,000 for twenty years. The council is asking the Legislature to ratify the by-law. The company has now 20 hands working in the nickel department, which was not destroyed by the fire.

J. M. Johnston, late bookkeeper for the Fort Frances Lumber Company, is making sensational charges against that company and other concerns to the effect that they falsified the scalers' returns and cheated the Ontario Crown Lands Department out of about \$2,000 in dues. Johnston admits that he was one who actually falsified reports. The Government, at the instigation of W. A. Preston, member for the district, who is implicated, has appointed a special commission of enquiry.

Eastern Provinces

A veneer mill is to be erected at Mansonville, Que.

C. Jobin & Company will erect sawmills at St. Augustine, Que.

There is said to be a good opening for a woodworking factory at Edmundston, N.B.

C. Auger's sawmill at St. Croix, Que., was recently destroyed by fire at a loss of \$10,000.

The Miramichi Lumber Company are making extensive repairs on their mill at Douglastown, N.B.

There are said to be good openings for woodworking and furniture factories in Halifax, N.S.

The Silver Lake Lumber Company, Limited, capitalized at \$100,000, has been incorporated to erect lumber mills, etc., at Eastman, Que.

The St. George Pulp & Paper Company, St. George, N.B., are installing lath and shingle mills, and will shortly put in machinery for sawing lumber.

The Nordin Company will build a large up-to-date woodworking factory and lumber mills at Tide Head, near Campbellton, N.B. A large quantity of machinery has been ordered from Sweden.

The Miramichi Lumber Company's (Chatham, N.B.) operations have been completed for the present season. Its total cut of lumber and pulpwood is estimated at 30,000,000 feet, or about 25 per cent. less than last year's cut.

The Dorchester Lumber Company, Sainte Mailachie, Que., capital \$100,000, has been incorporated to deal in timber limits and carry on a general lumber business. N. Labrecque, of Ste. Anselme, and J. Lacasse, of Framp-ton, Que., are members of the company.

A. L. Lambert and James Friedman, of Houlton, are negotiating for the purchase of eight thousand acres of timber land in the parishes of McAdam and North Lake, N.B. The property is now owned by Charles Keefe, of Vanceboro, and it is expected that the deal will be put through.

The New Brunswick Lumbermen's and Limit Holders' Association are urging the Government to do away with the granting of perpetual leases. As a rule they have no Crown land holdings, or only small ones, and they desire to share the benefit to be derived from the Crown areas.

The Shepard & Morse Lumber Company have arranged with Fraser & Company, whose mill is a few miles outside of Hull, Que., to have a large quantity of logs sawn during the coming summer. These two mills are the only ones in the Ottawa Valley that have yet begun operation. Their output, which will come close to 40,000,000 feet, chiefly white pine, is nearly all sold at last year's price.

A number of prominent concerns of Hull, Que., especially the Hawkesbury Lumber Company and the W. C. Edwards Company, report having sustained losses this spring through logs being carried away with the ice. This has occurred on both the Ottawa and Gatineau rivers, where the ice in breaking up smashed the connections between the outside logs of the booms and loosened logs floating away with the ice.

The sawmill season on St. Croix river, N.B., has begun, two mills being now in operation and others will hoist in a day or two. There is very little lumber on the wharves, and, as indications point to a brisk demand during the summer of 1909, the total output from the St. Croix mills will doubtless be large. All of the lumber manufacturing concerns on the river have a sufficient supply of logs left over from last year for present needs.

British Columbia

Knowles Planing Mills, Limited, Okotoks, Alta., have been incorporated. A \$20,000 addition will be put up at the Arrowhead Lumber Mills, Kamloops, B.C.

Pacific Coast manufacturers have raised lumber prices in Winnipeg and throughout the Northwest \$1 to \$3 per thousand feet according to grade.

The Fairview Cedar Lumber Company's sawmill at Vancouver has been burned down at a loss of \$5,000. It was owned by J. Hanbury, of Brandon, Man.

The Gaffney Timber Company, Limited, has been incorporated under British Columbia laws, with a capital of \$250,000, to carry on a sawmill and lumber business.

The Fraser River Lumber Mills has broken its own and established probably a world's record for a single day cut of ten hours. The total was 418,460 feet of lumber.

The Canadian Pacific Sulphite Pulp Company's sawmill at Swanson Bay, B.C., have been given a contract by the British Columbia Government for 3,500,000 feet of spruce lumber.

R. J. Watson, Dominion Government Timber Agent, is erecting a sash and door factory in Revelstoke, B.C. The management of the factory will be in the hands of his son, Gordon Watson, and O. West.

Robert Drake, of Omaha; H. D. Miller and R. Y. Appleby, of Stanton, Nebraska, and other capitalists, are visiting Vancouver and other British Columbia points with a view to making large timber investments.

The Michigan-Pacific Lumber Company, which owns over 30,000 acres of timber area in British Columbia, will begin sawing operations shortly. The president of the company is C. W. Liken, of Shebawing, Wash.

The big dredge 'Fruhling' has been working on the Fraser river during the month of April, deepening the channel for the lumber ships. Those in charge of the dredge express the utmost satisfaction with its performance, and look forward to great results when it has been in operation for some months.

The Northern British Columbia Exploration Company, which owns some sixty square miles of limits on the G.T.P., near Fort George, plans to erect a number of large mills at various points therein as soon as proper railway facilities are provided for bringing in machinery by rail. R. A. Mather, of Vancouver; H. Percy Simpson, of Victoria, and C. H. Enderton, of Winnipeg, are interested.

The lumber mills of Vancouver Island are now finding it necessary to operate their plants continuously to their full capacity. The Genoa Bay Mill, owned by the International Lumber Company, is preparing to open up after being shut down for twelve years. Much the same condition of affairs is apparent elsewhere. At Shawinigan and Cowichan Lakes the mills are exceedingly busy, much more so than has been the case for many months.

Among the lumber manufacturing companies recently incorporated under British Columbia laws are the following: Larson Timber Company, capital \$500,000; Jaffrey Timber Company, Limited, capital \$250,000; Western Pacific Development Company, Limited, capital \$500,000; Nahmint River Lumber Company, capital \$250,000; Northwest & British Columbia Timber Company, capital \$250,000; North Kootenay Land & Timber Company, capital \$750,000.

W. R. Welch and B. T. Lyons, of New York, who recently through F. J. King and W. B. Behner, of Seattle, bought the limits of the Jordan River Timber Company, located on the southwestern shore of Vancouver Island, have in turn just sold their holdings to the Michigan Pacific Lumber Company, of Grand Rapids, Mich. It is the intention of the new owners to erect large saw mills, with a standard gauge railway for facilitating the getting out of logs.

It is reported that the general business of the Canadian Pacific Railway, on the Pacific Coast Division, is in excess of what it was at this time last year. This applies chiefly to freight, and is caused by the greater revival in the lumber shipping to the Northwest. The revival of the lumber business has caused a very large demand for cars, and the local railroad yards are practically filled at the present time with empties that have been hauled to the coast.

J. C. Shields, manager for the Pitt River Lumber Company, which will soon be operating on the Pitt river; the Sovereign Lumber Company, at Sicamous, and the Monarch Lumber Company, at Savona, was recently in Vancouver from Regina, Sask. He will take up his residence at Savona, where the mill will be reopened. He reports that there is an excellent demand for lumber in the prairie provinces. Mr. Shields also organized the Independent Lumber Company, which distributes the output of these mills.

One of the largest recent timber and mill transactions was the sale of the property of the Crow's Nest Pass Lumber Company, at Wardner, B.C., to E. G. Filer and associates, of Manistee, Mich. Besides the mill, 130,000 acres of timber are included and the price stated is \$1,200,000. The Crow's Nest Pass Lumber Company was organized six years ago by Peter Lund, who since has been managing director. Associated with him were John C. Breckinridge, of Calgary; William Carlin and Alfred Doyle, of Port Steele, and David Breckinridge, of Wardner. The new owners will capitalize at \$2,600,000.

Provincial Constable Minty reports that timber is active in the Rock Bay district, B.C. During the past winter the British Columbia Mills, Timber & Trading Company have had a gang of between 100 and 200 men employed in making a rock cut for their logging railway about eight miles from Rock Bay, which when completed will open up a large tract of the finest timber. Hitherto this tract has been kept unspoiled by a ridge of rock, that runs out to the edge of the lake. At first it was proposed to penetrate the valley by tunnelling through the rock, but it was found that this task would be too large and expensive. The company's men are now blasting a roadway around the bluff on the edge of the lake. It will be completed in about two months and operations on the new limits will then be begun.

A recent dispatch from British Columbia states that activity is noticeable in logging in that province. Camps are being started in the Squamish district, where sites have been staked for two mills. The Nimkish Lake Logging & Lumber Company, operating on the northern end of Vancouver Island, is taking 20 to 25 men a week, and on an average 100 men a week are being sent out by the employment agencies. The Heaps Timber Company has camps at Narrows Arm and Hardy Island. In the interior the W. E. Cooke Lumber Company, of Kaslo, is driving its winter cut on the Duncan and Lardo rivers, having about 5,000,000 feet to get out. The Kettle river cut of the Cascade mill of the Yale-Columbia Lumber Company will amount to 12,000,000 feet, it being the intention of the company to cut all it can. Since resuming operation six weeks ago, 1,000,000 feet of lumber has been cut, and an order for 72 carloads of elevator material was received last week for delivery on the prairie.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

A Still Hunt

for the right kind of stock and the best of its kind is always going on among buyers and users. They are bound to have it and to get the best for their money that is available. If you've got the best stock on your yard that can be had for the money, you win and keep trade. If you haven't, your competitor wins and you lose.

Be as wise as the user and keep on a still hunt for the best stock you can get, and thereby get and keep the best trade there is in your section.

And if you start on such a hunt you must sooner or later light on our silk finished Quebec Spruce and New Brunswick White Cedar Shingles, which the general trade are recognizing as the best value for the money in those lines. They are products of our own mills and timber, and are put up for the best and most critical trade, and with the sole aim of making them "the best in the market."

WAKE UP—AIM TRUE—AND GET THE BEST.

The Dunbar Shingle Machine

can be used with great profit

It is a whole gang of men in itself and will turn out shingles automatically with very little attention.

The use of the Dunbar means that your capacity for trade will be greatly enlarged. It means that your machine will pay for itself in a very short time by increased business. The strongest word for the Dunbar is what users say of it.

J. B. Snowball Co. Limited, Chatham, N. B., says: "The two Dunbar machines in our mill have given such satisfaction that we have placed an order for two more"

Geo. F. Parker, Buckingham, P. Q.: "On a two million contract of bone dry cedar, the stock could not have been manufactured at a profit without the Dunbar Machine."

The Dunbar eliminates three great evils, viz: delays, repairs and saw hampering.

Write to day for complete information.

Manufactured solely by

McFarlane, Thompson & Anderson Mfg. Co.

DeLoach "Prince" Hand Feed Shingle Mill

JOHN H. CRANE
Manufacturer of Lumber and Shingles
DELOACH MILL MFG. CO., BRIDGEPORT, ALA. MONTEREY, ALA., JULY 2, 1907.

GENTLEMEN,—I purchased from you in 1905 a "Prince" hand feed shingle machine. I have operated it and find it all you claim for it. We cut at the rate of 30,000 shingles in 10 hours and made first class shingles. I consider your machine a very light running machine. If I wanted another hand machine I would certainly buy a DeLoach Prince.

With best wishes for your success, I am

Yours very truly,
JOHN H. CRANE.

Send for Catalogue of Engines, Boilers, Gasoline Engines, Saw Mills, Shingle Mills, Planers, Gang Edgers, Lath Mills, Grinding Mills, Water Wheels, Etc. Complete Circular and Band Mill Equipment.

DeLoach Mill Mfg. Co. Box 511,
BRIDGEPORT, ALA.

Long Logs

and heavy logs are handled
just like any other kind by the

McGIFFERT Log Loader

It does heavy work and lots of it and does it
under many conditions impossible by other
methods. It saves money in skidding too.

May we send our catalogue?

A Hot Fire under Your Boilers
means

**Plenty of Steam,
Engine Running Full Speed,
Every Man Hard at Work,
Every Machine Doing its
Utmost,**

**A Record-Breaking Cut
and
A Big Net Gain.**

The old reliable GORDON HOLLOW BLAST GRATE will give you the hot fire, regardless of the kind or condition of the fuel and regardless of the state of the weather.

It adds from 25 to 50 per cent. to the efficiency of a boiler.

It gives as good results with wet, green or frozen sawdust as a draft grate gives with dry wood.

It is equally effective with wet or green slabs and other coarse fuel.

It saves labor in firing.

It is so extremely durable that in the end it is **FAR CHEAPER THAN ANY DRAFT GRATE.**

Equally efficient in ordinary furnaces or Dutch ovens.—Adapted for any number of boilers, from one up.—No change in construction necessary. A hole must be made through each wall, for the pipe; aside from this, not a brick need be disturbed.—The largest outfit can be installed between quitting time Saturday and starting up time Monday morning.—No difficulty about maintaining a fire at night, when the blower is idle, and no objection to so doing.

Covered by six patents, the last issued August 25, 1903. Others pending.

Over 6,000 sets in use. Over 600 voluntary testimonials.

SOLD ON APPROVAL

You have thirty days after date of installation to decide whether or not you want to keep the outfit. In the latter event **WE PAY THE FREIGHT BOTH WAYS.**

Gordon Hollow Blast Grate Co.

"THE DUNBAR"

New and Improved STEAM LOGGING ENGINES

This is the machine for which we claim all the good Qualities possessed by any other and a great many valuable improvements besides.

Best on the Market

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

Keystone Saw, Tool, Steel and File Works

Philadelphia, Pa.

The Madison Williams Manufacturing Co., Limited

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

R. H. SMITH CO., Limited

— St. Catharines, Ont. —

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. All such Claims are FALSE, as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"
REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Safe, Reliable and Efficient

When you select Shimer Cutter Heads you get more than a mere assembling of materials. You get an outfit that combines the skill of the expert workmen, the most approved mechanical features and years of experience.

THE SHIMER CUTTER HEADS are made of Steel that is forged and hammered into dies. We use this material because of its close grain, uniform solidity and dependable strength. Machines to-day carry faster feeds; the spindles in them run at greater velocity; the Heads must sustain increased working strain as well as to overcome the power of centrifugal force. Metals from which Cutter Heads are made must be stronger, tougher and more firm in grain and texture to successfully meet requirements of to-day.

Let us send you full particulars about the later makes of Shimer Cutter Heads—how they can be expanded to suit different thicknesses of material in an instant—how they will save you all the "fitting and trying"—how they will remove many of the annoyances which come up daily.

Our Catalogue and Pattern Book contains 200 pages of Cutter Head information which we are pleased to mail on request.

“Hamilton” Improved Lath Mill

This machine has a larger capacity than any other standard lath mill—it will easily turn out 70,000 lath per day, or even more.

One firm cut over 17,000 pieces of lath in one hour using this mill

Only a good machine could do work like that—and it is safe, easy and economical to operate.

Whenever You Want any Machinery, Write Us

We build everything you need in your mill, and we make only strong, reliable machinery for stationary mills—the kind that is most economical for you to install and that gives the best service and greatest output when it is in.

We carry a good stock of Saw Sharpeners, Shingle and Lath Mill Machinery, and if you ever want to get any of these machines quickly, we can probably furnish them promptly.

We have a number of interesting catalogues showing the foremost types of modern sawmill machinery, and we would like to send them to you. If you would care to have them, just say so on a post card.

Why You Should Use The Shimer Cutter Heads

For Flooring, Ceiling, Siding, Ship Lap, Jointing, Double
Ceiling, Doors, Sash, Blinds, etc.

It has been demonstrated many times that monies invested in a small outfit of the Shimer Cutter Heads will save their cost within a few weeks use.

Every time your foreman sharpens an old-fashioned Door, Sash or Coping Bit he must carefully bring it back to the proper cutting shape, consuming a considerable portion of his time. Usually a high priced man is thus fastened to details when his service could be handled to better advantage if using the Shimer Cutter Heads especially fitted to your patterns.

These tools being made per order, carry in their outline the perfect counterpart of the work, thus by simply filing the Bits and setting them to the gauge, the fitting of the manufactured parts is assured.

The difference in the expense items will soon save the cost of the tools.

We will send them on trial 30 days to any responsible manufacturer. This gives opportunity to try the best and most complete tools for planing mill work. Address

"I Am Convinced
**Simonds
 Shingle
 Saws**
 Have Saved Me Money"

A man bought nine 10 inch Simonds Shingle Saws.
 He wanted the best and paid the price.
 He knows whether he won or lost on the deal.
 A careful record of Shingle Saw cost was kept, with
 the result that after a few months the record showed, in
 that mill, the saw cost per thousand shingles cut to be
 slightly less than one-half of one cent. About 9 cent
 saw cost for twenty thousand shingles.
 That is why this Millman said he was convinced
 Simonds Saws are *money makers* because they are *cost savers*.
 This is a statement of fact. We have the proofs and

will gladly show them. If you want low cost use the
 right saws—Saws made of Simonds Steel, made by
 Simonds Methods. Dollar for dollar value is given. A
 saw to sell for less money than the Simonds cannot be as
 good. It cannot run as economically, and it will not
 make the same profit for you in the long run.

More shingles mean more money from the same block
 of wood.

For shingle saw prices and particulars, address our
 nearest office, giving size, number of teeth and gauge of
 saw desired.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 11

Canadian Lumbermen's Association

The annual meeting of the Canadian Lumbermen's Association, which took place on May 18th at Ottawa, was an event of unusual interest to all umberman in Canada. Although this organization is only in its infancy, it is already performing work which gives it a right to be classed with the successful institutions for the improvement of trade conditions which have recently become so prominent a feature of business methods. In the United States a similar association has been in existence for many years and has proved itself of inestimable benefit to its members. In Canada, with only one year's existence, the Canadian Lumbermen's Association has started on a career which shows that it will in a short time become equally as useful to its members and a factor of equal influence in the regulation of trade conditions.

The greatest effort of the Canadian Lumbermen's Association, outside, of course, of the work of organization which has taken up much of its time, has been that in connection with the freight rates on lumber which were increased so generally from Ontario and Quebec points by the C.P.R. and G.T.R. on May 1st, 1908. On its face the increase was a compliance with the order of the Board of Railway Commissioners for the creation of a uniform tariff. In its effect it is an unfair advance of rates from all points where large quantities of lumber freight originate, and a lowering of the rates from points where practically no lumber is freighted. The railway companies have admitted the truth of this claim, although they have presented statements which are calculated to persuade the Railway Commissioners that the increases are too slight to be worth bothering about, in consideration of the uniformity which they provided.

In regard to this point it is significant that the C.P.R. and G.T.R. have presented statements showing the earning power per car for two

months only, and that these months are not the same for each railway. For this reason it was impossible to learn what the combined effect of the changes was. At the request of the Canadian Lumbermen's Association these figures will be duplicated, and a statement obtained, covering four months' returns of freight earnings per car for the two railway companies. From this it should be possible for the commissioners to come to a definite idea as to whether the contention of the lumbermen is well founded. It will be the middle of September, however, before these figures are obtained, and in the meanwhile lumber freight will be moved at the advanced rates, but the railways have undertaken to make a refund on all lumber shipped after July 15th, in case the Board orders a reduction of rates or the return of the old tariff. In having secured this much the Canadian Lumbermen's Association has done good work on behalf of its members in Ontario and Quebec. With the support of lumbermen from all parts of Ontario it will be able to do similar good work when occasions arise, for all its members.

In the freight rate matter, lumbermen will have gained a distinct advantage from the better understanding which has already sprung up between themselves and the railway companies. This was well evidenced by the presence of several representatives of the railway companies at the annual banquet of the association. These representatives vied with one another in expressions of good-will toward the lumbermen, and in their efforts to explain that their own desires were to see that the railways obtained only such treatment as was consistent with fair play, and to assist them to make the roads earn sufficient to pay a reasonable profit and at the same time provide the necessary funds for carrying out the improvements which were continually necessary. This improved feeling between the shippers and the railway companies is a distinct advantage to both parties. It will be the duty of the Canadian Lumbermen's Association to foster this feeling while seeking to protect the rights of the lumbermen. With the support which the association has already received it will feel encouraged to widen its sphere of work. If it secures the support which it deserves and which it has every reason to expect, from lumbermen in all parts of Canada, it will be able to return to its members in actual benefits which can be measured in dollars and cents, advantages which it would be a mistake not to seek by so effective means.

A Serious Situation at Ottawa

The serious waste of water and interruption of business which is reported from Ottawa, on account of the rush of waters released in the northern tributaries, is an occurrence which has caused loss and anxiety regularly for so many years, that it seems ridiculous to find another season arrived with conditions, if anything, worse than they have been for many years in the past. This is exactly the state of affairs, however, at Ottawa to-day, and thousands of men with families dependent upon them are idle. So far as trade is concerned it may not be a bad thing to have less manufacturing of lumber going on just at present, but the temporary condition of trade is as nothing, compared with the interests of those who are dependent upon the manufacturers of lumber for their livelihood. Moreover temporary conditions are not the only ones to be considered. Although the mills will probably open again within a few weeks, they will have to face the possibility of another shut-down, perhaps for a still longer period, later in the summer, when the waters are low and the falls begin to run dry.

This situation at Ottawa provides one of the first lessons Canada has received, and one of the most costly, in regard to the dangers following upon widespread timber cutting without the necessary precautions being taken to preserve the flow of the waters, which in former years were held back by the forests. In the early days of lumbering in Canada the forests of the upper Ottawa were so thick that they looked after the flow of the water naturally. At present the Chaudiere Falls are almost obliterated, in spite of the fact that on account of the floods of last year it was expected that low water would prevail this year. The conclusion is inevitable that the Ottawa river has been so denuded of its natural powers of reserving its flow, that artificial ways must be resorted to in future. Already a beginning has been made both at Ottawa, by the power users on either side of the river, and at the outlet of Lake Temiskaming, by the Dominion Government. These two works are expected to make a great difference when they are both in operation. The works

at Ottawa, however, are powerless under such conditions as those which prevail at present. Their effect is rather to direct the flow than to preserve it. The dam at Lake Temiskaming should be constructed with all possible speed consistent with good work, and the Government should immediately take steps to have constructed an effective series of dams

and other works for the preservation of the water supply on the upper Ottawa. If this is not done in time to afford an appreciable measure of relief before the spring of 1910, the lumber manufacturing industry all along the Ottawa valley will have suffered a severe setback which it may take many years of prosperity and care to overcome.

The Lumber Trade Situation—Some of its Factors

There is a remarkable unanimity of opinion among lumber manufacturers in western Canada regarding the present condition of the markets for which they cater. With one voice they declare that at present there is no possibility of making a profit upon their transactions, and the opinion is very generally shared that much of the reason for this is the failure of the various efforts which have been made to regulate the output and to maintain prices. This is in reality only an effect from other disorders, more deep seated and difficult to remedy. The situation in the lumber business to-day is a simple one from a theoretical economic point of view. It is the result of a prolonged period of commercial depression, brought about by an infinite number of causes, and aggravated, so far as lumber is concerned, by extreme overproduction and shortsighted sacrifice of stocks. These aggravating causes are really only contributory to the general one. Depression in the lumber business during the past year was bound to come, but its effect might have been much less serious if those engaged in the production of lumber had been able to consider the general good rather than their own immediate necessities. Unfortunately for most of them, however, and especially for those in western Canada, the immediate needs of the individual manufacturer are generally so urgent as to make consideration of the general welfare of the lumber business both impossible and impracticable.

Last summer, the revival of trade depended upon the crop of grain. This was fortunately good, and manufacturers and retailers both took heart. The farmer, however, is a difficult man to persuade and is very conservative about opening his purse in doubtful times. It took an active winter and spring campaign to induce him to buy lumber. Now, just when orders were beginning to appear, the crop for 1910 has become a factor, and a backward spring with late seeding, are resulting in unwelcome diffidence on the part of the purchaser. Orders from retailers who had counted on a good building demand are being cancelled here and there. The net result of affairs at present is that the coming summer's crop will be an important factor.

In connection with the situation, an interesting letter has been received by the "Canada Lumbermen" in reply to an enquiry regarding the state of the lumber trade business. Coming from Mr. H. H. Spicer, of the Export Lumber & Shingle Company, Limited, it will be regarded as the opinion of one who is closely in touch with actual conditions. Mr. Spicer says: "We do not consider the outlook for the lumber trade from

the Prairie Provinces any too good. It is, of course, well known to everyone interested in the trade that there is a tremendous overproduction of lumber for the requirements of the trade of those provinces, and while such conditions exist we cannot see any hope of a reasonable volume of business with satisfactory prices for all the different manufacturers of lumber and shingles catering to the trade of our three prairie provinces. All the different plans that have been taken to organize the producers of lumber for the purpose of keeping down production and regulating the price have not been very successful, as is only too well known, and in face of the supply being so very much in excess of the ordinary demand, these artificial methods of regulating the output and trying to maintain a satisfactory price cannot be expected, to be at the very best, any more than temporarily successful. So far as the immediate prospects go, the late seeding is very much against them, and a good many cancellations of orders, and requests that they be held back are now taking place. It would appear, however, that if a fair acreage of grain be sown, coupled with the heavy immigration and the large amount of railway construction, that the demand for lumber from all points west of the Great Lakes should be very good during the present year."

The situation in Ontario, from the point of view of one of the large Ottawa valley manufacturers, is set forth in another letter, the writer of which states that in his opinion there are very large stocks of white and red pine lumber on hand, accumulated during the last two years, which, owing to general depression, have not been worked off. The result is that the supply is, and has been, considerably greater than the demand, which has had a considerably depressing effect upon prices. This writer believes that the final adjustment of the question of the duty on lumber going into the United States will have a good effect upon shipments. He also believes that the business generally is improving. Of course it is difficult, he writes, to say how fast conditions will improve. Just now there is a good deal of building under way in all the large cities of Canada; in fact the building permits are remarkably larger than last year so far, and large stocks of lumber will be absorbed this year in the building trade. This writer concludes by saying that he does not expect the output of lumber at the mills to be as great this year as formerly, a fact which, taken in conjunction with the building activity, should tend towards better conditions in the lumber market.

Freight Rate Hearing Advanced Another Step

The hearing of the freight rate complaints made by the Canadian Lumbermen's Association before the Board of Railway Commissioners at Ottawa, was taken up again on Tuesday, May 18th, and considerable advance in regard to the settlement of the question was made. Mr. Wallace Nesbitt, K.C., on behalf of the Lumbermen's Association, presented its case, and Mr. G. F. Shepley, K.C., looked after the interests of the railways.

In accordance with the suggestion made by Chief Commissioner Mabee at the previous session, the G.T.R. and C.P.R. had prepared a statement showing the earnings of their cars from the various shipping points in Ontario to other Ontario points and to ports of export, under the new tariff and under the old tariff. The C.P.R.'s statement covered the months of September, 1908, and March, 1909, and the G.T.R.'s statement covered the months of June, 1908 and February, 1909. These statements bore out to a considerable extent the claims made by the Canadian Lumbermen's Association that the new tariff involved an increase of rates from all the important shipping points. Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, had undertaken an extremely onerous task during the interval, which involved obtaining

statistics from all possible shippers at the points under consideration, showing their actual shipments and the freight rates paid upon them. Mr. Hawkins' statistics were also tabulated and presented to the Board. They bore out minutely the claims upon which the complaint was made. The statements shown by the railways, however, did not show so great an increase as the statement presented by the association. They were somewhat unsatisfactory because they covered separate months, and it was impossible to gather from them what the increase of freight rates was upon the total shipment of lumber by the combined rates for any one month. For this reason the commission found themselves at a standstill inasmuch as it was not possible to compare the figures given by the railways with those given by the Canadian Lumbermen's Association. The figures given by the Canadian Lumbermen's Association covered both railways.

There was an extensive discussion between the counsel for both sides in regard to a request by the Canadian lumbermen's Association for further statistics. The railway representatives claimed that the expense had been so great, both in time and money, that they would not care to duplicate it. The Canadian Lumbermen's Association urged

that it was impossible for the Commission to obtain a proper understanding of the situation with only the incomplete statistics which the railway companies had afforded.

Chief Commissioner Mabey, however, took to some extent, the view of the railways, inasmuch as they had done what had been requested of them, i.e., had given a statement showing for each railway the increased earning power per car for a stated period. He did not think, therefore, that it would be proper to put them to the further expense of preparing a statement which would afford similar statistics for a longer period of time, such, for instance, as six consecutive months. Mr. Nesbitt argued that without a statement covering such a period it would be an impossibility to form a comprehensive judgment of the situation.

After a lengthy consultation between the counsel for both sides, the representatives of the railway companies finally agreed to duplicate each other's statistics. Under this arrangement the C.P.R. will present additional figures showing the increased earning power per car from the various points of lumber shipment in Ontario for June, 1908, and February, 1909, and the G.T.R. will give a statement of the same nature covering September, 1908, and March, 1909. Thus there will be provided a statement from which it will be possible to obtain an accurate

1908, an increase of \$1,757.40 on 2,399 cars, an increase of 2.23 per cent., and for February, 1909, an increase of \$810.98 on 1,674 cars, an increase of 1.44 per cent. The combined increase for June and February on the G.T.R. was \$2,568.38 on 4,073 cars, an increase of 1.89 per cent.

The statement presented by Mr. Hawkins on behalf of the Canadian Lumbermen's Association showed on the two roads an average increase of 2.08 per cent. per car on 11,962 cars. These cars were estimated at 30,000 pounds each. If estimated at 40,000 pounds, the weight used in the statistics given by the railways, the increase would be \$2.77 per car. The average increases per car shown by the statements presented are as follows: C.P.R., \$1.44; G.T.R., 63 cents, and Canadian Lumbermen's Association, \$2.77.

Mr. Wilson, of Wilson Brothers, Woodstock and Quebec, appeared before the Board, during an interval in the discussion, and explained the situation which the change in tariff had made in regard to his business. The former basis of rates was the amount of cubic feet, but it was now the weight of the timber. There were, however, no proper facilities for weighing strings of two or three cars at many of the stations. The old rate had been 4 and 4½ cents for hardwood from points

Summary of results from application of revised rates of May 1st, 1908, to shipments of lumber made between Canadian points, and to Canadian ports for export.

Canadian Pacific Railway—

	No. of cars	Weight in pounds.	September, 1908.			Increase.	No. of cars.	Weight in pounds.	March, 1909.			Increase.

G.T.R.—June, 1908, and February, 1909.

Summary of results from application of revised rates on shipments of lumber, shown by statistics gathered by the Canadian Lumbermen's Association from shippers' actual statements:

	No. of cars.	Amount of Increase, net	Average increase per car of 30,000 lbs.	Rates unchanged	No rate	Total
				No. of cars.	No. of cars.	of cars.
G. T. R.	6,528	\$12,172.00	\$1.86	1,902	492	8,922
C. P. R.	2,418	6,424.85	2.66	397	225	3,040
Totals	8,946	\$18,596.85	\$2.08	2,299	717	11,962

idea of the increased earning power per car of both railways for the four months of June, 1908; September, 1908; February, 1909; March, 1909.

When this agreement had been reached it was decided that the matter should again be taken up before the Board on Tuesday, September 21st. The representatives of the Canadian Northern Quebec Railway also undertook to provide similar statements.

These statements will be furnished, if possible, by the railway companies on the 1st of August, and if this is too early, by August 15th, and copies will be given to the Canadian Lumbermen's Association so that the association may have an opportunity of studying them carefully before appearing before the Commission. An understanding was also reached that in case the Railway Commission should find that the old tariff ought to be put in force or the new tariff materially reduced, the railways should agree to make a refund of rates collected from the date of July 15.

The statistics presented by the railway companies as to the increased earning powers of their cars under the new tariff showed that on the C.P.R. during September, 1908, there was an increase of \$1,782.52 in freight collected upon 1,437 cars, which amounted to an increase of 4.78 per cent. of the total earnings. For March, 1909, the increase shown was \$2,316.42 on 1,393 cars, an increase of 5.45 per cent. The combined increase for the two months amounted to \$4,100.94 on 2,830 cars, being an increase of 5.14 per cent. The G.T.R. showed for June,

in Ontario to Toronto. To Quebec the rates were 10 cents on pine and 12 cents on hardwoods. The change had made a great increase all round, especially on timber of 35 feet and up, which must be loaded on two or three cars. On these the rate had been increased nearly 50 per cent. The shippers always had to make heavy claims for overcharges on this class of timber, because it could not be properly weighed. The railways frequently allowed these claims, but the inconvenience of such a roundabout method of business was too great to be continued. This year they had been quoted rates of 10 and 12 cents a hundred pounds from points in Ontario to Canadian points, but after commencing to ship they had been notified by the Grand Trunk Railway Company that these rates were only applicable on timber of 35 feet and under. The other rates were raised by 4 and 5 cents a hundred pounds. They had not received returns on all their cars yet from Kingston, but by the present rates it cost just as much to sell timber to Kingston as to take it from any Ontario point to Quebec.

They considered that this was a most unjust method of handling timber. Under the former system it was all measured in Toronto by the railways and in Kingston by Calvin's people, and freight was paid according to these measurements. They knew exactly what they were doing then. Under the new system they would have to suffer a very heavy loss unless the railways made a refund in each case.

Meeting of Lumbermen's Association

Annual Gathering of the New Body—Reports of an Active and Successful Year—Old Officers Re-Elected—Representative Attendance of Members

The annual meeting of the Canadian Lumbermen's Association was held in Ottawa on Wednesday, May 19th, in the Board of Trade chambers. The president, Mr. Gordon C. Edwards, occupied the chair and there was a representative gathering of lumbermen from many parts of Canada.

After the transaction of preliminary business the members listened to an address by Mr. R. H. Campbell, Superintendent of the Dominion Bureau of Forestry, upon the work which the Bureau is doing. Mr. Campbell explained at some length the efforts which he is making to obtain from manufacturers of lumber throughout Canada an accurate statement as to the amount of lumber, lath, shingles, pulpwood, etc., which they cut, so that an estimate of the annual cut may be obtained.

Gordon C. Edwards, Ottawa, President of the Canadian Lumbermen's Association.

There should be some definite record, he said, of the wood production of Canada. The Dominion Department of Forestry was therefore making an attempt to gather these statistics and intended to undertake the work annually. The work could only be done with the cordial co-operation of lumbermen and others engaged in the wood industries. They hoped to be able to organize as efficient a service for the obtaining of these statistics, as the service which had recently been established in the United States. If the department could obtain the co-operation of the Canadian Lumbermen's Association in this work it would be of great advantage. No information obtained from the lumbermen for this purpose would be made public, which could do any injury to those who supplied the information. All information received, in fact, would be absolutely confidential, and the only information published would be that contained in the general bulk statistics.

Mr. Campbell was listened to with much interest and the president assured him that the association would give the subject careful attention.

The election of officers was then taken up and a motion was made that the president for the year should be Mr. J. B. Miller, of the Parry Sound Lumber Company, Toronto. Mr. Miller, who is vice-president, declined the honor and said that he believed the interest of the association would be best served by retaining the president (Mr. Gordon C. Edwards) in office for another year. The present officers were engaged in an important work relating to railway matters, and he believed that it would be unwise to elect other officers until this work had been brought to a conclusion. This suggestion met with the approval of the other members present, and the list of officers was left the same as it was last year, though a few alterations were made in the directorate.

The officers and directors as finally agreed upon were as follows: Hon. President, J. R. Booth, Ottawa; President, Gordon C. Edwards, Ottawa; Vice-President, J. B. Miller, Toronto; Directors, H. J. Bartlett, Orillia; J. C. Browne, Ottawa; J. S. Gillies, Braeside, Ont.; A. W. McLaurin, Montreal; J. J. McFadden, Toronto; F. W. Avery, Ottawa; W. C. Laidlaw, Toronto; B. H. McLennan, Montreal; Wm. Power, Quebec; E. H. Lemay, Montreal; F. N. Waldie, Toronto; Angus McLean, Little Cascapedia, Que.; W. Price, Quebec; Legislation Committee, Ward C. Hughson, Ottawa; H. K. Egan, Ottawa; J. C. Browne, Ottawa; P. Whelen, Ottawa; Wm. Power, Quebec; A. McLaurin,

Montreal; R. M. Beckett, Quebec; Dwight J. Turner, Toronto; H. J. Bartlett, Orillia; W. D. Lummis, Toronto; Secretary, Frank Hawkins, Ottawa; Treasurer, R. G. Cameron, Ottawa.

The secretary in his annual report expressed his appreciation of the many acts of kindness and assistance which he had experienced from members of the association. The formation of an association consisting of a membership from ocean to ocean as contemplated and embodied in the title "Canadian," had made it necessary that local conditions and customs should be considered carefully and dealt with sympathetically. They could not all think alike, and what might be all right and perfectly satisfactory in Ontario, might be the reverse in British Columbia. Therefore, with a keen appreciation of the difficulties confronting the association in this direction, he bespoke the kindly interest and continued assistance of its members.

After referring to the encouraging growth of the association, Mr. Hawkins reported that, according to instructions, he had covered the ground from Halifax, N.S., to the border between Manitoba and Ontario. He believed there was no doubt that the lumbermen of these provinces would avail themselves of the opportunity of joining the association.

Mr. Hawkins outlined the history of the freight rate hearing before the Board of Railway Commissioners, which had resulted as reported elsewhere in this issue.

By invitation the president and secretary of the association had attended the annual meeting of the National Wholesale Lumber Dealers' Association in Philadelphia on March 2nd and 3rd, and the information gathered there would undoubtedly have a marked effect in the conduct of the affairs of the Canadian Lumbermen's Association.

J. B. Miller, Toronto, Vice-President of the Canadian Lumbermen's Association.

The secretary of the association had been elected a member of the Canadian Shippers' Committee and he believed that the work done by this committee would demonstrate conclusively the wisdom of his having accepted the position.

Mr. Hawkins suggested that if it was thought desirable small working committees should be formed as follows: Collection of debts, claims, etc.; trade reports (credit and general); inspection, grading and sales; transportation; legislation; arbitration; insurance; legal; publicity; forestry.

In conclusion Mr. Hawkins said that the claim might be set forth with fairness that the usefulness of the association had been fully demonstrated. The experimental stage had been passed, and a very much enlarged field of usefulness was before it.

The date of the next annual meeting was fixed for the first week in February, 1910.

Mr. J. B. Miller introduced a short discussion on the matter of freight rates from Byng Inlet and other Georgian Bay points. He told the meeting that the rate on lumber from Byng Inlet to Buffalo was eight cents per hundred pounds, whereas from Parry Sound to Buffalo it was 14 cents, although the Parry Sound haul was shorter. He had instructed Mr. Wallace Nesbitt to bring a case before the Board of Railway Commissioners, upon the point. He wished to know the opinion of the meeting upon the question whether this was not a proper subject for the association to deal with, rather than an individual. The unanimous opinion was that the association should take the matter up. Accordingly, the case will be brought before the Railway Commission by the association. Mr. Miller in his explanation of the subject said that an interesting feature of the situation was that the freight from Byng Inlet going on an 8-cent rate had to pass through his own yard, from which the rate was 14 cents.

The following were present at the meeting: V. R. Marshall, Brockville Lumber Company, Limited; J. F. Burstall, John Burstall & Company, Quebec; W. D. Lummis, Cavendish Lumber Company, Limited, Toronto; A. MacLaurin, Charlemagne & Lac Ouareau Lumber Company, Limited, Montreal; J. F. Rochester, Dobell, Beckett & Company, Ottawa; G. C. Edwards, W. C. Edwards & Company, Limited, Ottawa; J. J. McFadden, Ferguson & McFadden, Renfrew; J. C. Browne, Fraser & Company, Ottawa; Gilmour & Hughson, Limited, Hull, Que.; G. W. Grier, G. A. Grier & Son, Montreal, Q.; M. P. Kinsella, Ottawa; D. H. McLennan, McLennan Lumber Company, Limited, Montreal; W. A. Firstbrook, Northern Timber Company, Limited, Toronto; J. B. Miller, Parry Sound Lumber Company, Limited, Toronto; W. H. Bromley, Pembroke Lumber Company; J. H. Redfern, Montreal; Wm. Power, W. & J. Sharples, Quebec; Peter Whelen, Shepard & Morse Lumber Company, Ottawa; Victoria Harbor Lumber Company, Toronto; Daniel Wells, White Pine Lumber Company, Blind River.

St. John River Logging Troubles Again to the Fore.

Among the perennial troubles which come to the lumbermen of Canada, none are more aggravating nor more serious in their possibilities of loss and ill-feeling than that which occurs at the St. John river in connection with the driving of Canadian and American logs. This difficulty is of such long-standing existence that it has obtained the dignity of an international trouble and has occupied the attention of the Governments of both countries. At one time within the last year it seemed to be almost on the eve of solution, but again it has turned up this year, and Canadians who have logs which are being held back are complaining bitterly of the fact that through no fault of their own they are obliged annually to suffer a loss resultant upon the periodical delay.

The matter is one which it should not take a competent body of arbitrators a great length of time to settle in a manner satisfactory to both sides. Some spirit of give and take will evidently have to be shown by both, as the difficulty is of such ancient origin that it would probably have been settled long ago, if right pertained absolutely to one side. It is understood that the International Waterways Commission has the matter in hand at present, and those who are concerned are looking forward anxiously to the presentation of the commission's report. This report will probably have to meet with the sanction of both Governments if it is to settle the question definitely. Government sanctions take some time in passing their various formalities, and it is therefore all the more incumbent upon the Commission to act quickly and definitely. Canadian log owners are complaining to-day that 10,000,000 feet of their logs are being held up. This in itself is a serious enough matter for quick action, though probably long before the question has been settled these logs will have passed on to their destination. The important thing is that in future a great industry, such as that of lumber manufacturing, should be relieved of any artificial restraint which can be removed and which it will probably be found can be done away with, without any corresponding loss to the parties who at present fear that the change will result to their detriment.

With the season's lumber cutting operations practically at an end it is estimated that the cut in the State of Maine this year amounted to about 700,000,000 feet. Compared with other seasons these figures show no appreciable gain or loss, the anticipated heavy falling off from last season's cut being overcome to a considerable extent by the late spring. A considerable quantity of snow remained on the ground up to early in May, making it possible to pursue logging operations later than usual. Much of the lumber cut will be taken to the pulp mills to be converted into paper.

The log driving season is now on and thousands of men are gathered at the headquarters of the Penobscot and other rivers ready to start the logs down the waterways to the pulp and lumber mills. In addition to the logs cut this season a large quantity of lumber cut last year, which was left in the woods on account of the inert market, will be brought down.

Hoo-Hoo at Toronto

Members of Eastern District Hold Successful Concatenation—Timely Suggestions for the Welfare of the Order

Vicegerent Snark J. L. Campbell.

Perhaps not since the resurrection of Hoo-Hoo, in 1892, has a more satisfactory concatenation been held than that which took place in Toronto Friday evening, May 28th. Larger meetings there have been, but none in which the spirit of good fellowship more thoroughly pervaded the proceedings from start to finish. Even the kittens restrained themselves in a most admirable manner under the trying circumstances incident to their journey through the onion patch.

The Vicegerent Snark, J. L. Campbell, presided in a most acceptable manner, and selected a staff of officers who gave him splendid assistance. He was also supported by a distinguished representative of the Supreme Nine, in the person of W. A. Hadley, who will doubtless be honored a few months hence by being elected Snark of the Universe.

The city of Hamilton was well represented, doubtless due in some measure to the energetic work of Mr. Patterson, than whom there is no more enthusiastic Hoo-Hoo.

The officers of the evening were as follows:—

Snark, J. L. Campbell, Toronto.
Senior Hoo-Hoo, T. S. Young, Toronto.
Junior Hoo-Hoo, W. P. Bull, Toronto.
Bojum, Thos. Patterson, Hamilton.
Scrivenoter, G. H. Hager, Toronto.
Jabberwock, H. B. Weiss, Toronto.
Custodian, B. Stewart, Toronto.
Arcanoper, James Lauder, Toronto.
Gurdon, A. R. Riches, Toronto.

Six blind kittens were inducted into the mysteries that prevail beyond the garden fence, answering to their names as follows:

L. J. McCormack (Mickle, Dymont & Company), Barrie.
H. A. Rose (Fraser River Lumber Company), Toronto.
F. H. Potts (M. Brennen & Sons), Hamilton.
John Siemon (Siemon Brothers), Warton.
C. G. Grant (C. G. Anderson Lumber Company), Toronto.
Sidney Richardson (Retail Lumber Merchant), Elora.

Following the concatenation there was the usual session "On the Roof," which was both enjoyable and instructive. The following toasts were proposed and duly honored: "The King," by singing the National Anthem; "Wholesale Interests," by Walter Laidlaw; "Retail Interests," by Thos. Patterson; "The Kittens," by the several candidates; "House of Hoo-Hoo," by W. A. Hadley, W. J. MacBeth, H. P. Hubbard and J. G. Cane.

The toast of the Vicegerent Snark was proposed in a happy speech by Mr. Hadley. In responding, Mr. Campbell referred at some length to matters affecting the welfare of Hoo-Hoo. If the Order was to prosper as it should, he believed its scope should be widened so that questions of importance to the lumber trade would be discussed at meetings. There was doubtless much good to be accomplished by meeting together and getting acquainted. Too frequently we have an erroneous conception of our competitor. Mr. Campbell referred to the benefits which had accrued to the lumber trade of western Canada through the organization of retail associations. It had eliminated injurious price-cutting and placed many retail lumbermen on their feet, whereas if the policy of individual effort had been continued, many of them would have long ago succumbed. Hoo-Hoo in the Eastern District of Canada had not been particularly active during the past twelve months, but if its destinies were guided by influential and careful members, there was no reason in his opinion why it should not be made a most useful organization.

The final toast was that of "The Press," which was responded to by T. S. Young, of the "Canada Lumberman."

During the evening a splendid programme of entertainment was furnished by G. H. Hager, Connor Mehan, James McLaughlin and the National Male Quartette, Messrs. Gardner, Evers, Bannati and Davis. The accompanist was E. Bowles.

A large number of men have left Cranbrook, B.C., for the Skookemchuck, to start a tie camp for Breckenridge & Lund, of Wardner. Over 100 men will be employed.

First Annual Banquet of Lumbermen

Members of Canadian Association Hold Successful Gathering at Ottawa Important Suggestions Made by Speakers—Transportation Companies' Representatives Express Good Will and Wishes

The first annual banquet of the Canadian Lumbermen's Association was held in Ottawa at the Laurentian Club on Tuesday, May 18th, and was an unqualified success. The association has only completed the first year of its existence and is already established as one of the most useful and energetic associations for trade purposes in Canada. This was amply demonstrated by the fact that the banquet was attended by about sixty members and their guests, and that among the members present there were representatives of the lumber industry from Ontario, Quebec and British Columbia. When one takes into consideration the short time which the association has been in existence and the little opportunity there has been for organization work, the association, and more especially its secretary, Mr. Frank Hawkins, are deserving of congratulation upon the results of their efforts.

The president of the association, Mr. Gordon C. Edwards, of Ottawa, presided at the banquet, and upon his right was seated Mr. R. L. Borden, Leader of the Opposition in the House of Commons. On the left of the chairman sat Hon. J. G. Foster, United States Consul-General for Canada. Others at the head table included Wm. Power, of W. & J. Sharples, Quebec; John Pullen, Montreal, assistant freight traffic manager of the G.T.R.; Senator W. C. Edwards, Ottawa; J. W. Hendry, Vancouver, B.C.; Mayor Hopewell, of Ottawa; R. H. Campbell, superintendent of the Dominion Bureau of Forestry; W. B. Bulling, Montreal, assistant freight traffic manager of the C.P.R.; S. H. Howard, general freight agent for the C.P.R., and J. F. Orde, Ottawa, solicitor for the Canadian Lumbermen's Association.

Those who were seated at the other tables included:

W. K. Grafftey, of the Montreal Lumber Company, Montreal; Geo. I. Dewar, of the Export Lumber Company, Ottawa; A. H. Huff, divisional freight agent of the G.T.R., Ottawa; M. S. Donaldson, superintendent of the G.T.R., Ottawa; Ward Hughson, of Gilmour & Hughson, Hull, Que.; Mr. Felion, of E. H. Lemay, Montreal; J. H. Redfern, Montreal; R. G. Cameron, treasurer Canadian Lumbermen's Association, Ottawa; Frank Hawkins, secretary Canadian Lumbermen's Association, Ottawa; Fred & C. J. Booth, of J. R. Booth, Ottawa; F. W. Powell, of the Rideau Lumber Company, Ottawa; Reginald Beckett, of Dobell, Beckett & Company, Quebec; R. A. McCormack, of the C. P. R., Ottawa; J. E. Walsh, C.M.A., Toronto; W. H. Rowley, of the E. B. Eddy Company, Limited, Hull, Que.; J. B. Hunter, Deputy Minister of Public Works, Ottawa; J. B. Miller, of the Parry Sound Lumber Company, Toronto; Dennis Murphy, of the Ottawa Transportation Company, Ottawa; Thos. Wilson, Ottawa; W. A. Firstbrook, Toronto; W. C. Laidlaw, of the Laidlaw Lumber Company, Toronto; H. Boulton, of the "Canada Lumberman," Toronto; W. S. Tilston, of the Transportation Department of the Montreal Board of Trade; Samuel Thompson, of W. C. Edwards & Company, Ottawa; Walter Ross, of J. R. Booth, Ottawa; Geo. W. Grier, Montreal; A. C. McCall, M.P., Simcoe, Ont.; D. H. McLennan, of the McLennan Lumber Company, Montreal; Peter Whelen, of the Shepard & Morse Lumber Company, and president of the Ottawa Board of Trade, Ottawa; G. C. Hurdman, Ottawa; G. A. Fowler, lumber agent of the C.P.R., Montreal; George Gordon, M.P., Cache Bay, Ont.; E. R. Bremner, of Watson & Todd, Limited, Ottawa; J. W. Smith, of the Colonial Lumber Company, Pembroke, Ont.; J. C. Browne, of Fraser & Company, Ottawa; Guy Thombs, of the C. N. Quebec Railway; C. A. Hays, of the G.T.R.; V. R. Marshall, of the Brockville Lumber Company, Brockville; A. W. Fraser, K.C., Ottawa; W. H. Bromley, of the Pembroke Lumber Company, Pembroke, Ont.; J. C. Cox, of the Robt. Cox & Company, Ottawa and Liverpool, Eng.; M. P. Kinsella, of Skillings, Whitney & Barnes, Ottawa; H. B. Poliwka, of J. Burstall & Company, Quebec.

Several letters of regret at their inability to be present at the banquet were read by the secretary, among them being letters from: Sir Wilfrid Laurier, Hon. Sidney Fisher, Minister of Agriculture; Hon. J. K. Kerr, Speaker of the Senate; Hon. Charles Marcell, Speaker of the House of Commons; John W. Loud, general traffic manager of the G. T. R.; Geo. F. Craig, president of the National Wholesale Lumber Dealers' Association; S. F. Perry, secretary of the National Lumber Dealers' Association; Joseph H. Sorley, of the C.P.R., Ottawa; W. B. Tindall, of the Parry Sound Lumber Company, Toronto; Otto Lachmund, president of the Mountain Lumbermen's Association, Revelstoke, B.C.; Wm. A. Anstie Nelson, B.C., secretary-treasurer of the Mountain Lumbermen's Association; Frank Patterson, president of the Pacific Coast Lumbermen's Association; R. H. Alexander, Vancouver, B.C., secretary of the Pacific Coast Lumbermen's Association; J. W. Long, president

of the New York "Lumber Trade Journal"; John G. Staats, manager of the New York "Lumberman's Review"; Hon. Gifford Pinchot, chief of the United States Forest Service; J. E. Defebaugh, editor of the "American Lumberman"; Hon. Clifford Sifton; James Davidson, president of the Ottawa Retail Lumber Dealers' Association, and J. S. Davis, Brooklyn, New York.

The Banquet.

The menu was a most inviting one and the guests all enjoyed the repast excellently. The after-dinner proceedings were marked by the delivery of a number of unusually interesting speeches and by the rendering of several much appreciated songs, one of the chief contributors to the music being the secretary of the association, Mr. Frank Hawkins.

Mr. Gordon C. Edwards, who presided, acted as toast master and called upon all present to open the toasting by drinking the health of the King. This was loyally attended to and was succeeded by enthusiastic toasts to the Governor-General and the President of the United States.

In reply to the toast to the President of the United States a felicitous speech was made by Hon. J. G. Foster, United States Consul-General for Canada. Mr. Foster referred to the waning supply of timber in the United States, saying that, according to a generally accepted estimate, it would only last for about thirty years more. The lumbering operations of the future, therefore, must be of a conservative nature, and involve wise and careful cutting of the timber crop. It had been a source of the greatest pleasure and satisfaction to him to note that there had been this year at Washington a conference of representatives from Canada, Mexico and the United States for the joint consideration of the conservation of the natural resources of the continent. He believed that from this conference much more even than material good would come, for it recognized the mutual interest which we had in each other's welfare and that the best and wisest use of the resources of each part would constitute and make up the best use of the resources of the whole. These two countries were very similar in their origin and extent, and were identical in many of their interests. They would, he believed, constantly tend toward advance and progress, and work together for higher ideals and standards of civilization and true progress.

Mr. R. L. Borden, who was next called upon, referred at first to the fact that four committees of the House of Commons had been appointed to study the conservation of the natural resources of the country. They had begun their work during the present session and already many important recommendations had been made as a result of their work. He believed that their efforts would result in a great deal of good to the country.

One thing had especially struck him, Mr. Borden said, in regard to the lumbering industry of Canada. That was the absolute lack of definite information on many important points. He could go to the records of the United States and find that the total lumber cut of that country was about 40,000,000,000 feet of sawn lumber and that the cut of railway ties, cordwood, etc., was about 100,000,000,000 feet. It seemed to him remarkable that he could get no information as to the general lumber cut of Canada. Another thing had also impressed him very forcibly. He had always been under the impression that the forest resources of Canada were immensely greater than those of the United States. He had disabused himself of this impression, however, before he had gone very far, because, after consulting a number of authorities, he had found that upon the whole the forest resources of the United States were slightly in excess of those of Canada, although the cut in the United States was immensely greater than in Canada at the present time.

Public interest was certainly being awakened upon this subject and he felt sure that there was absolute no division of opinion between the two political parties in the House of Commons upon it. They were both concerned in educating the people to understand the importance of conserving these resources and in employing the best means available for effecting that purpose.

Mr. A. McCall, M.P., Simcoe, Ont., in a short speech, said that he believed the lumbering industry developed the best men in the community. From the day when a young man first shouldered an axe until he had gone through all the operations of the lumber business, he was engaged in work which called upon him for the exercise of courage and high ambition and which made of him as good a man as any country could produce.

Mr. George Gordon, of Cache Bay, Ont., delivered a speech which held the close interest of all present. In his opening remarks he attributed the lack of statistics for the lumber business in Canada to-day, to the fact that heretofore they had not had an organization like the Canadian Lumbermen's Association. Formerly it had been very hard to get the Georgian Bay and the Ottawa lumbermen together, with those of Nova Scotia and New Brunswick. The object of the association, as he understood it, was to get all the lumbermen of the Dominion together and to gather together all kinds of useful information regarding the lumber industry for the benefit of the lumbermen and of the public. He believed that the association would be able to accomplish much good, not only for the association itself, but for the whole of Canada. He did not believe that lumbermen in Canada had been as wasteful of the forest resources of the country as the lumbermen of the United States had been of their country's. Some years ago, however, perhaps 20 or 25 years ago, in the provinces of Ontario and Quebec much timber had been slaughtered simply because the lumbermen could not find a market for the tops of trees and for inferior lumber such as they had markets for to-day.

Mr. Gordon thought that the governments of Canada, local as well as Dominion, were primarily responsible for most of the waste that had taken place. The Province of Ontario was trying to do good, and was doing much good to-day, but he wished to draw their attention to the fact that they were selling timber under conditions which should not be continued. When selling timber they were giving 10-year leases, and in some cases 15-year leases. The owner of a lease, when the time drew near for it to expire, found out that if he had not all the pine cut off, it would revert to the Crown. The consequence was that no lumberman was going to leave any lumber on the land if he could help it. Another thing which he thought was wrong was that the Government, after selling the timber, should also collect a due of so much a thousand feet for the lumber cut. They should sell the lumber for what it was worth in the first place, and not impose a subsequent charge in the form of a due. The timber should belong to the lumberman so long as he thought fit to cut it. He would then allow the smaller timber a chance to grow.

Where timber was growing on lands which were not fit for settlement, settlers should never be allowed to go into that land at all. Where the timber was found on land which was good for settlement they should make different regulations, but if they would keep settlers out of the land which was not good for anything but growing timber, they would have timber in Canada for years and years to come. Lumbermen all knew that the timber resources, and particularly the white pine, in Canada was very limited. If the cutting went on in the way it was going on at present they could soon count the years when they would have none left at all. But if the Government would sell the timber which they now held, under an arrangement by which the owner was allowed to cut and handle the timber in his own way, there was not a lumberman in Canada to-day who would not prove one of the most efficient agents for the preservation of the forest resources.

Mr. Gordon concluded by declaring that the Canadian Lumbermen's Association had been very successful, but that it had only started on its career as the most useful lumber organization which Canada had ever had.

The Lumberman's Interest in the Forest.

Senator W. C. Edwards spoke forcibly about the effect of fire upon the forests. The greatest care should be taken to preserve the forests from fire. If there had been no other instrumentality for the destruction of the forests than the woodsman's axe, Canada's forests to-day would be green and unbroken. Fire had destroyed twenty times as much timber in Canada as the axe. It was true that there had been a great awakening in regard to the importance of preserving the forests, and he believed it would result in more judicious cutting in the future than heretofore. No one else in Canada had the same interest in the preservation of the forests as the lumbermen had. Every lumberman who was worthy of consideration at all had large investments in mills, dams, and improvements which had cost large sums of money, and the conservation of the forests was their primary interest.

In conclusion, Senator Edwards said that he believed the Canadian Lumbermen's Association had a very promising future. Some work had already been done in connection with the cost of transportation, and, from the large number of pleased railway men who were in attendance at the banquet, he took it that the question had been everlastingly settled and that the banquet was a love feast to celebrate the settlement (applause and laughter).

Mr. J. B. Miller, of the Parry Sound Lumber Company, Toronto, made a short speech and proposed a toast to Mr. John W. Hendry, of Vancouver.

Mr. Hendry said that he hoped the whole country would take up the matter of the conservation of the timber resources of Canada. The Province of British Columbia was about to appoint a board of conservation for its natural resources, and the Dominion was going to do something similar. He hoped that every province would fall in line. He was pleased to know that the Canadian Lumbermen's Association intended to take in the whole country. He would do anything he could

to interest the people of British Columbia to help the association along.

Mayor Hopewell, of Ottawa, made a brief and amusing speech and referred to Mr. J. R. Booth as the greatest man in Canada. He concluded by saying that he did not know what the freedom of the city was or where it was kept, but if the lumbermen could find it they were more than welcome to it (laughter).

The Transportation Companies.

The transportation representatives were next toasted. Mr. D. Murphy, of Ottawa, introduced them with an amusing talk and was followed by Mr. John Pullen, assistant freight traffic manager for the G. T. R., Montreal. Mr. Pullen announced that if the banquet had only been held a year ago he doubted whether the railroads would have had the hardihood to advance the freight rates at all. It was the sincere desire of the management of the G. T. R. and of all its officers to serve the public efficiently and well. They had transportation for sale and desired to give the public the best service possible at the lowest charges which were consistent with good service. They had to keep in mind, however, not only the interests of the patrons of the line, but those also of the poor shareholders on the other side of the Atlantic. The company had to send the shareholders a little contribution once in a while. With what was left it was their desire to improve the service and to lower the freight rates if there was anything to spare. The public, however, could not expect the company to go on reducing freight rates on the one hand and improving the service on the other.

With reference to the unfortunate little affair which had brought them together at Ottawa at that time, he had nothing to predict as to the outcome. He would say, however, that the railway companies were trying to present a fair statement of their side of the case. He believed that the lumbermen were doing the same. He had also the highest regard for the impartiality of the Board of Railway Commissioners. Whatever decision they should reach the G. T. R. would abide by it cheerfully.

Mr. W. B. Bulling, assistant freight traffic manager of the C. P. R., Montreal, spoke in much the same strain as Mr. Pullen. It was a matter of business with the railways he said. The efforts they were making at the present time were for the purpose of removing a great many of the grounds for complaint which had arisen regarding improper or unequal charges for similar services. He had no doubt that these differences would be adjusted satisfactorily for all concerned. It was very difficult to bring about uniformity without involving changes, both up and down.

Mr. Guy Thombs, general freight agent of the Canadian Northern Quebec Railway, in a brief speech, said that he believed that if the truth were told they would find that the change in freight rates a year ago was responsible for the organization of the splendid Canadian Lumbermen's Association.

Mr. R. H. Campbell, superintendent of the Dominion Department of Forestry, spoke of the forestry conditions of Canada. He said that the Government and the public were both taking an increased interest in the forestry situation. The Government was realizing more and more, as the lumbermen had realized years ago, that the first thing to be done for the preservation of the forests was to give them effective protection against fire. Another important point which was being given more attention to-day than formerly was that land which was not suited for agriculture should not have settlers allowed upon it. The young timber should be protected and as little of it as possible should be destroyed. Every tree which was saved was so much saved to the assets of the Dominion and to the lumbermen themselves.

The president, Mr. Gordon E. Edwards, announced that the conclusion of the speaking had then been reached, and suggested that the banquet should be brought to an end by singing "God Save the King." He expressed his pleasure at having present, for the banquet, lumbermen from the Pacific Coast, and from as far east as Quebec. This was the first occasion on which lumbermen from Ontario and Quebec had met around the festive board. From the indications afforded he felt sure that the association was bound to succeed.

Before the singing of the National Anthem, Mr. S. H. Howard, general freight agent of the C. P. R., proposed a toast to the officers of the association.

This toast was heartily drunk and President Edwards in reply said that he was a firm believer in associations. If they did nothing more than accomplish good fellowship they were getting mighty good value for their money.

The members then joined in singing "God Save the King," and the banquet was brought to a conclusion.

The representatives of the Canadian Manufacturers' Association and of the transportation companies who have been working for some time upon the preparation of a uniform bill of lading, have practically completed their work. The bill has been agreed to by all interests and laid before the Board of Railway Commissioners. Some matters of minor importance still remain to be settled and the bill, it is expected, will shortly be embodied in an order of the Board making it effective.

THE BRITISH COLUMBIA TRADE

Brisk Demand for Lower Grades

Vancouver, May 22.—The local demand for lumber is quite brisk, the lower grades especially being active. There is lack of uniformity, however, in prices. Manufacturers have endeavored to agree upon prices to some extent, but have not succeeded. The increased demand, however, has enabled manufacturers to be a little independent and prices, as a result, are a little higher than they were in April. Local lumber is sold in the rough and the British Columbia consumer is therefore obtaining his lumber at less than cost. The prices on the prairies are also below cost. In spite of the better prices obtained for higher grades of lumber, manufacturers claim that they are not receiving, at present, an adequate return for the capital which they have invested.

The price of fir logs at present is from \$9 to \$10. The cost of manufacturing lumber is at least \$4. The finished lumber, therefore, should sell at least at \$14. Instead of this it is bringing only about \$10.50 to \$11. The output is from 50 to 65 per cent. common and therefore, in order to even up, a good profit must be secured on the higher grades. This has been impossible for some time, and it is said that last year the majority of the mills made no profits.

Locally the consumer benefitted by the depression in the mill business, and buildings were erected probably cheaper than they will ever be again.

The unsatisfactory condition of affairs has been brought about largely, and still exists, as a result of the competition of rough lumber from the mountain sections and spruce from Saskatchewan. Owing to their closer location to the prairies, the mountain mills are able to obtain better freight rates and to lay their lumber down cheaper than the coast mills. The coast fir, however, being of a better quality than that of the interior, permits of the manufacture of a greater percentage of high grade lumber. On the higher grades the coast mills have the advantage both in prices and supply.

The quality of the logs now coming on the market appears to be getting lower each year. The percentage of culled logs is high. At present prices, lumber cannot be cut profitably from these logs. This applies with particular force to cedar logs.

It is interesting to note that the log market is being depressed by logs towed over from the United States, where, owing to lower cost of logging and to the heavy acreage tax, loggers are racing against time to clear their claims. In British Columbia, loggers are being forced to go further and further inland to secure their supplies.

There is little change to report in the shingle situation. This is the harvest season for shingles, and orders are plentiful from the prairies and eastern Canada. The base price is steady at \$2. The price for the clear star grade in the United States is \$1.65 and there is therefore no market for the Canadian article of this grade. The price with the duty off would only be \$1.35. Clear stars are therefore being marketed entirely at home.

It is asserted in several quarters that on the whole the condition of the lumber and shingle markets is much improved. The demand for timber is declining on account of high prices. The cost of timber at present, compared with what it was when the Government acreage was free for the asking, is a very different matter. Formerly it cost the original licensee something like 35 cents, and now it costs from \$1.50 to \$3.

Cheap Gas Production from Sawdust.

A plant for the production of gas from sawdust, shavings, mill refuse, etc., which has been invented by Walter Thomas, of Vancouver, will be one of the interesting exhibits at the Alaska-Yukon Exposition. Anything which has carbon left in it will be available for the supply of material from which to manufacture the gas. The difficulty about the use of mill refuse in the past has been the lack of thorough combustion and the consequent large quantity of smoke produced. Mr. Thomas' plant overcomes this by having a double combustion chamber. Compressed air is used to drive the smoke and gas from one chamber through the white heat of the other chamber, above the fire box, before it enters the cleaners. It is claimed that by this means every particle of smoke and suspended matter is consumed in the second chamber, and that the gas which is emitted is pure. The gas is carried from the retort to an engine where it produces power for driving an electric motor. Mr. Thomas claims that he can produce gas from sawdust for ten cents a thousand feet.

Senator McCumber, of North Dakota, in a recent discussion on the subject of free lumber and shingles, stated that American buyers sought Canadian shingles "because they are a better product than our own." If the tariff were lowered American producers would have to turn out a better article. Senator Piles argued that American shingles were produced on the true principle of forest conservation—i.e., instead of using best quality cedar, the makers got their material from logged-off lands,

thereby making good use of large quantities of timber which would otherwise be useless. A reduction of the shingle tariff would force American mills to cut new timber, while there would be little improvement in the quality. Reading between the lines, one is obliged to conclude that British Columbia shingles are the ruling factor in the market, because of their splendid quality.

New Freight Line via Mexican Isthmus.

Arrangements have been completed for the establishment of a line from Montreal to Vancouver and Victoria via the Tehuantepec route, which is as follows: The Elder Dempster Company, Montreal to Puerto on the Gulf of Mexico; Tehuantepec National Railway, Puerto to Salina Cruz on the Pacific coast (190 miles); Canadian Mexican Pacific Line, Salina Cruz to Vancouver, Victoria, etc. Rates quoted so far are about 20 per cent. lower than the lake and rail transcontinental rates. They include all charges, except insurance on goods. The line is willing to pay half the inland charges to Montreal on shipments originating at water points in Ontario or Quebec. The Canadian Manufacturers' Association has notified the Elder Dempster Company that the basis of rates proposed would not enable eastern manufacturers to compete with Great Britain. Negotiations are now going on with that in view. Special regulations have been adopted for the admission, free of duty, of Canadian goods shipped to Vancouver and Victoria via this line.

Australians Impressed by Canadian West.

Mr. George Fenwick, the veteran editor of the Otago "Daily Times," New Zealand, speaking of some features of the recent visit of the Australian delegates to the Imperial Press Conference, referred to an enjoyable inspection of the large lumber mills at Vancouver and thereabouts. He said: "The magnitude of the operations of these mills greatly astonished and surprised us, nothing similar to them being found in Australia or New Zealand. We were the more interested in these mills, owing to the fact that large quantities of lumber from them are shipped to our country. We speak of this lumber as Oregon, and I had always been under the impression that the lumber we were getting was Oregon pine. I find, as a matter of fact, that it is Douglas fir. In New Zealand there has been a discussion of the question whether we should continue to admit this lumber. It is argued by those who are interested in the native timber, that the importation of Canadian lumber has interfered with the development of the timber interests of our own country and that there has been a depreciation in the price. A commission has been appointed to inquire into the matter. So far this commission has not reported, but it is unlikely that action will be taken to exclude the timber of Canada."

Personal Mention.

Mr. Chris. McRae, the energetic and popular manager of the Alberta Lumber Company, is in the East at present on a business trip.

Mr. Agate, manager for L. M. Rice & Company, dealers in manufacturers' supplies, spent a week in Seattle recently on business for his firm.

Gordon Watson and O. West will be managers of a planing mill and sash and door factory at Revelstoke, which is being erected by R. J. Watson, Dominion timber agent.

A party of Portland, Ore., men who were in Vancouver recently looking for timber properties, comprised W. H. Snell, G. Laidley, E. D. McClellan, D. H. Morton and B. M. King.

Messrs. J. R. Craig, Alex. Johnson and Jas. Cooke, known as the Abbotsford Lumber Company, have disposed of their mill and limits on Abbotsford Lake to Messrs. Arthur & J. Tretheway, formerly of Harrison lake.

George F. Gibson, who has been manager of the Pacific Coast Lumber Mills, has severed his connection with that company, and has been succeeded by E. Helliwell, who has close personal relations with a number of the shareholders.

Mr. Ernst Dolge, a well known Tacoma lumber dealer, was in Vancouver recently for a few days, picking out a bill of lumber at the Vancouver Lumber Company's plant. Mr. Dolge takes only the best clear stuff, for which he pays the top price, and his orders are eagerly sought by coast lumbermen.

Mr. W. A. MacKinnon, Canadian Trade Commissioner at Bristol, England, has been transferred to the trade commissionership for the Midlands and Wales. His office in future will be at Central House, New street, Birmingham. His position at Bristol has been filled by the appointment of Mr. E. D. Arnaud, late of St. John's, Newfoundland.

Mr. Walter R. Duckworth, of Montreal, Que., inspecting engineer for the Dominion Bridge Company, who are erecting the new Granville street bridge, spent a few days in Vancouver recently accompanied by

Mrs. Duckworth. He was well pleased with the progress being made on the structure and expressed himself optimistically concerning Vancouver's natural advantages.

Many New Mills Being Built.

At the Rock Bay camp of the Hastings Mill Company an eight-mile stretch of logging railroad is nearing completion, and a shorter line at the company's Bow camp is now being operated.

Mr. W. Beach, a Seattle lumberman, will erect a shingle mill on the north end of Lulu island, within the city limits of New Westminster, in the near future. He has purchased a site of seven acres from the city.

The McLaren sawmill, burned at Barnet a few days ago, will be immediately rebuilt, according to advices which have been received in Vancouver by agents of Mr. Alexander McLaren, of Buckingham, Que., one of the principal owners of the property destroyed.

Work is to be shortly commenced on a large shingle mill to be constructed at Esquimalt, adjacent to the E. & N. Railway line, to cost \$150,000. The wharves and buildings will be commenced in June. There will be facilities for water carriage of logs, water shipment, and the loading of large vessels.

Mr. John Hanbury, whose former plant on False creek was removed to make way for the new Granville street bridge, states that he will erect, this summer, a modern sawmill just south of the old location, where he will have a water frontage of 1,200 feet. The mill will have a daily capacity of 75,000 feet of lumber.

Messrs. Brooks and Woodburn, of the Brooks & Scanlon Lumber Company, one of the largest sawmill firms in America, were in Vancouver recently. They stated that it was their intention to erect a sawmill of large capacity in or near New Westminster. Construction will commence in the near future. Messrs. Brooks and Woodburn are also preparing to take out large quantities of timber on the Lillooet, where a seven-mile road is being built to tap the limits.

Interesting B. C. Short Lengths

A sawmill east of Kamloops, B.C., at Carlin Siding, was destroyed by a bush fire during May.

British Columbia lumbermen say they have had little trouble in securing plenty of labor for the season's work.

The Canadian fishing steamer "Celestial Empire" has given up the halibut fishing for the time being, and will engage in log towing. This is the second boat to quit fishing and go to hauling logs.

The mill at Still Creek, B.C., owned by the Royal City Planing Mills Company, had a narrow escape from destruction by fire recently. A stiff breeze fanned a nearby bush fire into a fierce conflagration, and for over two hours a force of fifty men had a busy time of it.

The mills at Cascade, in the Kootenays, have been very busy of late. Over 150 men are employed. These mills shipped over 1,000,000 feet of lumber to the prairies during March and had orders for 72 cars ahead of this month's cutting. The demand from the prairies is brisk.

The steamer "Indravelli," after loading lumber at Sydney, B.C., recently came to Victoria and loaded a million feet of lumber from Cameron's and Sayward's mills. This shipment was the largest ever made from the port of Victoria. The cargo will be taken to Suva and New Zealand.

No fire wardens have been appointed this year. The weather is becoming warm and there is already news of many bush fires in the interior. The close season for setting fires commenced May 1st, and something should be done at once. As there are no fire wardens, it is not possible to get permits to clear land by burning.

The cut of logs on the coast of British Columbia for April was 52,869,561 feet. This is the largest cut ever recorded for one month, it being 2,000,000 feet over the largest previous cut. With logs at high water mark as regards price, it is believed that there must be a decided drop. From present indications there will be as many logs go into the water in May as there were in April.

There are nine sawmills within a radius of 40 miles from Revelstoke, B.C., and all these claim to have a large number of orders for the summer trade. Some claim that they have had to refuse orders from the prairie customers. The increase of industry will necessitate the enlargement of gangs; logging camps will be also more severely taxed, and it is feared there may be some scarcity of men. Besides the mills, two sash and door factories will be in full swing.

Some discussion has been taking place recently among British Columbia mill owners regarding the advisability of organizing an insurance company among themselves. Under such a scheme each mill owner would pay annually into the company a sum equal to the amount he

would otherwise pay in premiums to a straight line company, but whatever the company earned would come back to the mill owners in dividends.

The British Columbia officials of the Dominion Timber Department are having two excellent power launches built for the use of themselves and officers of the department on the coast. When completed they will be among the best craft of the kind on local waters. The larger boat of the two will be 55 feet over all with 11 feet beam, and will have an engine of 30 or 40 h.p. She will have accommodation and berths for eight persons. The smaller launch will be 35 feet over all with 9 feet beam, and will have a 20 h.p. engine. She will have accommodation for four persons. Both vessels will be ready for operation this summer.

The competition of Puget Sound mills last year—intensified probably by the financial depression—undoubtedly told against the exports of Douglas fir (Oregon) from British Columbia to Australia. There has recently been a better demand for spruce, particularly in Melbourne, which is largely used for box and case making. The ships "Lindesfarne" and "Annesley," recently discharged about 800 standards (each 1,980 superficial feet) and about 700 standards, respectively, of spruce at Melbourne from the Shives Lumber Company, Campbellton, New Brunswick. The specification of these cargoes was 6, 7, 8, 9, 10, 11 and 12 x 3 deals.

Government Report on Crows Nest Destruction.

Mr. H. R. MacMillan, assistant inspector of Dominion Forest Reserves, made a preliminary investigation of the Crow's Nest Valley district in southern Alberta in the autumn of 1908, and has embodied the result of his investigations in an interesting report.

Only thirty-three square miles of unburned forest are left out of a total of two hundred and twelve square miles of possible forest area. All this area, according to the reports of early explorers and travellers, was originally covered by a dense forest.

In the following schedule he summarizes the condition of the tract:

Sod-covered, denuded area	85 sq. miles
Dead standing timber	34 sq. miles
Area covered with young growth	60 sq. miles
Unburned forest	33 sq. miles

Total 212 sq. miles

Thus no less than 179 square miles out of the 212 (over 84 per cent. of the area) has been cleared by fire at one time or another.

Eighteen square miles of the area is above timber line.

The area first mentioned, viz., the "sod-covered, denuded area," presents one of the most difficult propositions. Before railway construction started, this area was covered by a heavy fir forest. Now it is "a poor gravelly prairie, unfit for agriculture, or very little value for grazing, and which is in no way producing a crop." This is the result of repeated burnings. The first fire does not usually have this effect, but "a second or third fire rarely fails to kill all the forest reproduction," (i.e., the young trees) "to destroy the remaining seed trees, to burn off the upper layer of soil and leave a desolate waste."

Of unburned forest only 33 square miles (about 15 per cent. of the area) remain, and these are situated in the places that are least easy to get at, namely, at high levels and at the heads of valleys and in draws; and this forest is, consequently, least valuable. It is the timber that is easy to get at that the fire here, as everywhere else, has consumed or damaged.

Bear Brokers Blamed for Depression in United States.

The operations of bear brokers in the United States are blamed by some of the shingle manufacturers in British Columbia for the depression of the United States market. It is claimed that bogus price lists are circulated in the East for this express purpose. According to those who make this claim, these wholesalers offer shingles at lower prices than those quoted at the mills. Shingles cannot be sold at these prices, but the impression goes abroad that the mills are overcharging. The trade then goes to the wholesaler. Dealers and manufacturers have organized a campaign against these brokers. The brokers promise to retaliate by a more strenuous bear movement.

In British Columbia the wholesalers, fortunately, are too scrupulous and too few to be a menace to the shingle industry in this manner.

Hardware firms and grocery concerns report that business was never better. They attribute the activity to the number of camps starting up along the coast. This, no doubt, means that the loggers are all busy.

Mr. A. S. Brake, importing broker, 510 Homer street, reports a brisk demand for "Dey Time Registers." The Rat Portage Lumber Company have arranged to instal a No. 60 Time Recorder to serve 200 employees, and the Potlatch Lumber Company, Idaho, are putting in six machines of 150 capacity each. The Fraser River Lumber Company are also putting in additional recorders, to serve 50 men.

THE WOODWORKER

As to Factory Box Methods.

By B. MARSHALL.

Considerable disagreement exists as to which is the correct method of working lumber up into boxes. W. B. Thompson, in the March "Wood-Worker," says: It is a well known fact that all up-to-date box plants cut their stock to the right length, then rip it to right width for a complete shook, and resaw last." True, this holds good in some parts of the country. In other parts of the country it is a well known fact that the up-to-date box plants resaw the lumber first, dress next, and cut to size afterward. I know one of the largest box plants, running nine 6-inch vertical band resaws, doing the work that way. Either method has good points, and considerable argument might be put up in favor of either method.

Permit me to tell how this is done at a large plant where I have been filling for some years, the boxes manufactured being used for the packing of condensed milk, pure milk, butter, eggs, pancake flour, soap, flatirons, dry goods and other things. The lowest grade of pine, Canada pine, yellow pine, gum, bass, poplar, cottonwood, hemlock, birch, oak, maple, ash and other woods are used. Orders, as a rule, run up into many thousands and are run out at a remarkably rapid rate. Machines are located in such manner that the lumber travels from one machine to the other in a systematic manner, without the service of trucks, where it is possible to place them so, the rough lumber coming in one end of the shop, and ready-made boxes or shooks going out the other.

The lumber arriving at the factory, is put on trucks and moved to the band resaw. As this low-grade lumber consists of all widths, running all the way from 4-inch to 24-inch wide, it is cut as it comes from the car. The sawyer regulates his feed according to the surfacers, two of which he is supposed to supply with lumber. In hardwood this is rather a strong test, and two resaws are used for three surfacers. The surfacers are constructed with six-section divided feed rolls, which makes it possible to run six narrow boards of different thicknesses simultaneously, the planer man and his helper being careful at all times to keep the pairs together which come from one board.

From the planer the lumber travels to the cut-off saw, one planer being able to supply two sets of saws (a set consisting of a cut-off and a rip saw), and sometimes more, with lumber, depending upon the quality and size of boxes made. Every cut-off saw is provided with an up-to-date, reliable, automatic, quickly-changeable cross-cut gauge. These gauges are great time and lumber-saving devices. Supposing, for instance, the sawyer was cutting a certain length, and a bad place happened to be near the end. This gauge makes it possible for him to cut a shorter length without any loss of time. Two boards are cut at the same time, and sometimes more, if the lumber happens to be clear, being careful always to keep the pairs together. The odd lengths are dropped on the floor, to be gathered up by a laborer employed for this special purpose. The regular stock slides across a little bridge, from the cut-off saw to the rip saw, which is located near by.

The rip sawyer takes the stock as fast as ready, from the cut-off saw, ripping one-piece sides from everything wide enough, and two or more pieces for tops and bottoms, according to the order, two boards being cut at the same time. Crooked edges are jointed on the rip saw; this is accomplished by running them through the saw free-handed, by eyesight, without a gauge. A boy is stationed on the opposite side of the rip saw, to take away the stock and count it simultaneously. For this purpose he has a bench placed on that side of the saw, with a back rest, to pile the stock. This back rest has marks at certain heights, according to the thickness of the stock, and whenever the pile grows up to a particular mark, the boy knows the number of pieces, without the labor of counting them. The boy then passes the stock on to the boxboard matcher.

One boxboard matcher is able to keep the stock away for two sets of saws. Here the tongue and groove are cut on all the stock which needs them. One side of the matcher cuts the tongue, the other the groove. The feed is automatic and of high speed. Any board splitting or breaking out by matching is carried back to the rip saw, to be trimmed and fitted over again.

From the boxboard matcher the stock passes over to the driving benches and is driven together on solidly-constructed horses, made especially for that purpose, with a wooden mallet. The tops for all the boxes, also bottoms, ends and sides for some of the boxes, not ordered ready-made, are tied up here into bundles of 25 each, ready for shipment. The bottoms, ends and sides for boxes ordered ready-made, are passed to different machines, such as printer, hand-hole machines, etc. It is understood that the process of matching on ends and some sides is not necessary, hence these parts are passed on from the saws to the printers and hand-hole machine, and from there to the nailing machines, or lock-corner machine (dovetailer).

Arriving at the lock-corner machine, the ends and sides are placed in the machine, twenty or more pieces at one time, depending on the thickness of the stock, and both ends cut simultaneously. From there the ends pass to the automatic glueing machine and the sides to the automatic setting-up machine. The man on the glueing machine spreads glue on the ends, then places them in the setting-up machine, while the man on the setter-up places the sides in the machine and works the lever with his foot, which sets the machine in action, and the box is pressed together instantly.

From the setting-up machine the frames of the boxes are passed over slides to the automatic four-saw corner trimmer, where the boxes are trimmed on the corners by travelling over the saws twice, by an automatic feed. From the corner trimmer the frames of the boxes are

sent to the bottom-nailing machine, over slides, to have the bottoms fastened on. The man at the nailing machine also places the box, after the machine has performed its duty, in a sort of a hopper, which is connected with the side trimmer. The boxes are carried by an endless chain past two cutterheads, and the bottom of the box trimmed on both sides simultaneously. This trimmer runs without the attention of any one.

The man at the automatic end trimmer or blocker, which is next, takes the boxes as fast as they come from the automatic side trimmer. The man at this machine is supposed to rim the boxes at the end, also pull out all nails which might have been driven out on the sides. All the boxes for which the order says "nailed only," are framed up on the frame-nailing machine. This frame is given to the bottom nailer next, and then follows the same process as the lock-corner boxes. One set of nailing machines (a set consists of one frame and one bottom nailer) has a capacity of 1,600 to 2,000 boxes a day. In rare cases some boxes are sanded off on a big disk sander, which ends the journey in the box plant.

The shavings from the machines are blown directly into a shaving press, which forms them into regular bales the size of hay or straw bales, to be sold to livery stables in big cities, where the shavings are used for bedding the horses. The sawdust and scraps supply all the fuel necessary for power, light and heating the plant in the winter time.

Perhaps this method of making boxes has not the approval of some readers, nevertheless it has proven a money-making proposition, if one takes the growth of the plant into consideration. The first year in busi-

Bottom View of Cover.

ness it had one 6-inch band resaw. Five years later there were three single and two twin 6-inch band resaws. Figuring the average daily productive capacity, according to the size, this plant had no comparison at that time.

In the early days of the existence of this plant the planers gave considerable trouble. All of them were double surfacers, as they had to be, for the reason that a good percentage of the stock is dressed on both sides. But whenever they were used as single surfacers on this thin stock, knots and splinters would drop on the lower cylinder and thus block the passage of the lumber, often as much as three to four times an hour. In a case of this kind the planer man was compelled to let the bed down and clean the machine out, which meant valuable time lost to all the machines in the plant. In some instances an entire board would be run to the blower pipe, this resulting in a loss of lumber also. Lower cylinder

cutting first or last did not have any bearing on this matter, because both kinds were used in this shop.

After some expensive experimenting, it was decided to make a cover for the lower cylinder, as shown in sketches. This cover is made of hardwood. Every bolt on the head is countersunk into the wood, and the two parts are fastened together with hinges. Fig. 1 shows the cover in the right position with the stock passing over. Fig. 2 is an explanation of the only possible way of getting it in place, and Fig. 3 is a bottom view of the cover. The cover can be put in or taken out in a minute's time. It is needless to say that after this cover was invented, these machines ran without any further trouble whatever.

Useful Pointers for Woodworkers.

It may be that in some woodshops the equipment is limited and the jointer the only surfacing machine installed, yet often it becomes necessary to plane a board to an exact parallel thickness. This often entails an unnecessary amount of hand work. Mr. W. Stoughton gives the following useful suggestions in "Wood Craft":

First, run your board over the jointer to plane it on one side to an even surface. Next, on the circular saw, cut a rabbet out of the two

Fig. 1

Fig. 2

Fig. 4

Fig. 3

edges on the opposite side from that already surfaced, making each rabbet, as in fig. 1, the same depth from the surfaced side, or in other words, parallel to the surfaced side.

Out of two strips about $\frac{1}{4}$ by $1\frac{1}{2}$ inches and a piece of $\frac{7}{8}$ -inch board make a guide by nailing the two strips at right angles to the board and as far apart as the rabbets in the board to be planed. These will appear as in fig. 2.

With some study and invention a permanent guide may be made by having one strip fixed and the other movable. The two narrow pieces are to reach not quite to the cutters on the jointer, when the short piece is resting against the end of the table. By running the board over the jointer, using the guides to keep the uneven side parallel to the table, and by adjusting the table to take a cut just even with or a little more than the rabbets, you can readily see the method and the result obtained is surprising. By repeating the operation one can plane a board to any desired thickness, as in fig. 3.

Another little home-made device that may be of general use and one that has done the writer good service is a spider gauge, fig. 4. The round sliding rod A has a thumb-screw at its end, which allows the pointer B to be adjusted to depth. A thumb-screw on the handle or block gives the desired width. This tool has a multitude of uses and appeals especially to those handling irregular work.

William Robertson, secretary of the Rat Portage Lumber Company, Kenora, Ont., has been appointed manager of the company's business in British Columbia, and will leave shortly to reside in Vancouver.

Cooperage Machinery Improvements

Have They Kept Pace with the Needs of Manufacturers?—Interesting Paper by Mr. J. J. Innes

At the recent meeting of the National Slack Cooperage Stock Manufacturing Association one of the most interesting papers read was by Mr. J. J. Innes, of the Sutherland-Innes Company, Chatham, Ont., on "Improvements in Machinery for Cooperage Stock Manufacturers." Mr. Innes' paper was as follows:

In treating this matter, "Has the cooperage machinery manufacturer kept pace with the needs of cooperage stock manufacturers?" I should judge the best way would be, not only to refer to the improvements which have been made within the last twenty years in cooperage manufacturing machinery, but to consider the question, "Have manufacturers produced machines which work up the timber in the most economical manner?" In answering this question, I would say unhesitatingly, they have not, but the machinery manufacturers cannot be blamed entirely for this. On account of the limited amount of cooperage machinery which is manufactured annually and the demand for machinery being mostly from manufacturers who do not care to put in a large amount of money in the machinery, the machine men have not cared to go to the great expense that is necessary in experimenting on new machines, as they felt they could not be properly reimbursed for their labor and expense.

When I first commenced to go around the cooperage stock mills, 22 or 23 years ago, the machinery was considerably different from what is used now. I am now referring to the machinery used in the slack cooperage stock mills.

The stave machines were anywhere from 300 to 500 pounds lighter than they are now, the consequence being that there was a good deal of spring to the machinery, and a lot of thin staves were made. At that time 80 to 90 strokes to the minute was considered about the right speed to run a machine; a year or two later the machines were speeded up to 140 and even to 160 strokes per minute, as the tendency among the manufacturers was to use sawed instead of split bolts.

It is just about twenty years ago since sawing logs into bolts came into general practice; formerly the bolts were split out in the woods and brought to the stave mill in this shape.

Heavy Stave Machinery.

I think that John Greenwood, Rochester, N.Y., was the first man to commence manufacturing heavy stave machinery. As the mills commenced to use hardwood timber instead of elm, this machinery was still further increased in weight, but this has been practically the only improvement in the stave machine during the past twenty years. The same methods for equalizing, butting and jointing are still in use. The stave jointers are made a trifle heavier now than they were twenty years ago, but this is about the only difference in the machine.

In hoop machinery there have been considerable improvements made. The Michels machine was probably the first practical cut hoop machine on the market. This machine was improved upon by Park Bros., Chatham, Ont., who invented and perfected a very heavy, cumbersome machine with an overhead cut, a slicing motion and a tilt in the knife instead of in the table. I understand they only manufactured a few of these machines. One of them is now in use and is still making first-class hoops.

The Greenwood undercut machine then came into use, and with the improvements made on it at the instigation of the manufacturers themselves, both in making the machine heavier, strengthening the back of the machine by a hollow tubular back, improvements in the eccentrics, tilter and separator, this machine is probably as good a machine as there is on the market at the present time.

Heavy machinery for manufacturing hoops direct from the log was invented by D. H. Burrell & Company, I believe; at least, they were the first people who ever used the machine, but this machine was a most expensive one, and, in fact, was only practical for manufacturing almost perfect logs 20 inches and up in diameter. Outside of D. H. Burrell & Company and Tindle & Jackson, I don't think this machine was used to any extent. The Defiance Machine Works, Michels and the Ward Company all got out different hoop machines, some of which were good, some of them indifferent.

The planers have been considerably improved, but the standard planer is now practically the Ward pattern with improvements, and for the last ten years there has been practically no improvement in the hoop planer. The wheel pointer and lapper has been replaced by the automatic pointer and lapper, of which Michels' is the standard pattern. Some of the mills where the timber is tough second growth, have gone back to the old wheel pointer and lapper, which, after all is said and done, puts on the best point and lap of any machine, but is somewhat expensive to operate.

There has been no improvement in coilers, to speak of, the Park coiler being probably the best on the market.

In heading machinery, there has been considerable money spent,

and great improvements have been made. The old hand turner has been replaced by an automatic turner, which will turn either bevel or plain edge heading, and do almost anything but speak. As there are several manufacturers who turn out equally good heading turners, I cannot individualize any particular one.

Planers have also been improved, being made heavier, faster feed, and attempts have been made to perfect a revolving bed, but without success, up to the present time.

Wheel and Saw Jointers.

There have also been great improvements in both wheel and saw jointers, a saw jointer now having been perfected which will put a perfect joint on cross-grained hardwood heading, which has never been accomplished on a wheel jointer.

The principal improvement in the heading machinery, however, has been in the heading turner. Experiments have been made to have an automatic turner, but, on account of the impracticability of getting heading boards edged so that each plank would be the same size, this machine has not come into use to any extent, in fact, cannot be worked economically, or heading made from bolts. Where heading is made from deals, as in Great Britain and Norway, this machine can be used, and heading turned out three times as fast as we can do it with our un-edged and uneven width boards.

A great number of bolters have been invented, from the stand-up to the horizontal bolter, and as these bolters are used not only for cooperage machinery but for a great number of other purposes, the horizontal bolter has now been brought as near perfection as I think is practicable.

Now, the question is, what can be done to improve the cooperage machinery in the slack barrel trade? I believe myself that the lines along which the machinery manufacturers should work at the present time are to perfect a jointer which will automatically joint staves of uneven widths. I understand a jointer is pretty well perfected now, which will joint staves of even widths, automatically, and will be shortly placed on the market.

As the timber in the north, more especially elm, is getting scarcer all the time, there is no doubt but the future stave will be a veneer stave, provided a jointer can be produced which will automatically joint staves with a saw joint, making every stave the same width of about three inches. If a machine to do this work can be perfected, I think it will save timber, produce an excellent stave and enable the manufacturers in the South to make veneer staves at about half the cost of production of the present time, besides turning out a better stave, with a perfect joint.

With regard to machinery in the tight barrel part of the cooperage industry, I might be permitted to refer to this briefly.

There have been great improvements made during the last twenty years in these machines. The drum saw has been perfected so that not only can tight barrel staves be made on it, but slack barrel staves from small timber can now be made economically, and a great many of these machines are in use at the present time. Peter Gerlach's special stave machine will cut either tight or slack barrel staves from 20 inches to 42 inches long, any desired width or thickness, and is nearly as automatic as practicable. Peter Gerlach is undoubtedly the pioneer in this industry, and certainly turns out a machine for sawing staves which would be hard to beat.

A universal stave jointer has been invented to take the place of the old wheel jointer, which puts the correct bilge on staves, irrespective of their width. This is certainly a remarkable machine, and will joint either tight or slack barrel staves, with a proportionate bilge, according to the width of the staves.

Stave planers have been perfected which will dress either tight or slack barrel staves to a uniform thickness, planing up to 25,000 staves per day. Anyone interested in this machine can see it working at A. L. Hayes & Company, Nashville, Tenn., and manufacturers who intend to make sawed staves for the slack trade would do well to drop off and see these machines in action at this point.

There is also a double wheel jointer for jointing either tight or slack barrel staves, and two boys can joint more staves on this machine than four men with foot jointers. This machine is a good one to be used in jointing hardwood staves where power can be supplied. The only objection to this machine is the expensive hauling of the staves off the yard to the jointer.

Crozing Machines.

Automatic stave crozing machines have been invented which will chamfer and croze 30,000 to 40,000 staves per day, and do away with the objection of the coopers to use hardwood staves. These machines are available for either tight or slack barrel work.

Pail and tub stave machines have also been invented to work up the waste, both in slack and tight barrel mills. These machines are very desirable for mills which are cutting on basswood, white ash or white oak, and can be utilized either in slack barrel or tight barrel mill.

I believe myself that if the cooperage stock manufacturers would strengthen the hands of the machinery manufacturers by being willing to bear part of the expense in experimenting, either individually or as an association, a jointer which will automatically joint staves will be perfected in the near future, and the manufacturers of cooperage stock

will be able to utilize their hardwood timber putting it into staves and make more money out of it than they can by turning it into lumber, and thus prolong the stave industry in the North for years to come.

U.S. Senate Votes Against Free Lumber.

A mere two-thirds vote of the United States Senate on May 24th resulted in the defeat of Senator McCumber's free lumber amendment to the proposed lumber schedule of the new tariff. The vote stood 25 for and 56 against. A strong argument was made by Senator Root for a differential duty on dressed lumber, while Senators Borah and Heyburn, of Idaho, contended for the highest duty on lumber. Senators Clapp, Burkett and McCumber argued in favor of free lumber. They held that the lumber industry of the United States would not be injured by free admission of Canadian lumber. Senator Clapp paid a glowing tribute to the Canadian Government, saying that it was equal to the best.

Senator Root cited the various lumber interests along the Canadian border and gave reasons why they should be accorded a protective tariff. "Canada," he said, "offers to every planing mill which will move across the border a remission of taxes for from 15 to 20 years. So that the duty which we were imposing, if we adopt the committee report on dressed lumber, merely balances the tax that is imposed upon the property of our mills for the support of our state and municipal governments. My impression is that the differential of the Dingley Bill is just about at the right point to maintain a healthy opportunity for business and a healthy restraint upon business. I do not think there can be a reduction in these differentials that would not transfer a large portion of the planing business to Canada." Mr. Root read a communication from the Amalgamated Woodworkers of America as evidence that the employees of the industry regard the maintenance of a substantial differential as essential to keep their wages at the level established by the Dingley Law.

An analysis of the vote showed that 17 Democratic Senators voted against free lumber, for which the last Democratic platform declared in unmistakable language. Only ten voted for free lumber. Just before the vote was taken an amendment was offered as a substitute, placing all kinds of building materials on the free list. This amendment was defeated by 64 to 12. Other features of the bill are to be taken up and the Senate will be asked to return to the lumber schedule later.

Southern Mills Curtailing Their Output.

A despatch from Beaumont, Texas, states that a wholesale curtailment of production in the yellow pine plants of that territory is now in progress. The Long-Bell Lumber Company have issued a general order cutting the working time to four days a week. The Miller & Vidor Saw Mill Company, of Galveston, operating plants at Beaumont, Orange, Milvid and other points, also has cut the working time to four days a week in all plants. The Pickering Lumber Company is to close down one plant and possibly curtail production in the other plants. The Industrial Lumber Company, of Beaumont, has closed its plants at Vinton and Oakdale. The J. A. Bell Lumber Company, Limited, at Lake Charles, La., has reduced its working time to four days a week. The Central Coal & Coke Company has closed all of its plants for general repairs and when started will be at reduced time. The plant of the company at Ragley, destroyed by fire recently, is being rebuilt, but will not be operated until the market shows up strong enough to warrant the operation of all plants. The mill will have a capacity of 90,000 feet a day. The Neches Lumber Company has closed indefinitely. It has a 50,000 capacity sawmill in the north end of the city. The Willow Lumber Company, of Galveston, has closed both of its plants. The Nona Mills Company has curtailed production to some extent at its Fullerton plant. As a result of the above companies' action in regard to production the weekly output in this territory has been materially reduced.

A Vancouver report states that according to Washington manufacturers there will be a duty of 50 cents per thousand on shingles and one of \$1 on lumber entering the United States. Just what the American manufacturers base this belief on it is hard for them to tell. The fact remains that they are agreed that when the smoke of the tariff battle clears away the duties will be as mentioned. This means an advance of 20 cents per thousand on the present rate on shingles, and a decrease of \$1 on lumber.

One of the most novel and striking calendars that has reached the office of this paper this year is issued by the W. F. Hunting Lumber Company, of Vancouver, B.C. This enterprising firm have had a calendar pad attached to a shingle, while their advertisement is printed on the wood. At the top is a motto which all business men should heed, viz., "Cheer up, the worst is over."

A method of treatment of timber, known as the Henry Aitken method, is now used in many collieries. In this process the idea is to soak the timber in water, raised to temperature of from 190 to 200 degrees Fahr., containing enough common salt to form a thoroughly saturated solution.

1894 - 1909

I have much pleasure in stating that I have been using your "Camel Brand" Hair Belting for the last six years as it gives me the best satisfaction and I shall continue to give it the preference as long the quality remains as good as formerly.

We have been using a 10 inch "Camel Brand" Belt which has given us excellent satisfaction. It holds a good grip on the pulleys, and has not stretched as is usual with rubber and leather belts and was never taken up.

HENDERSON & POTS

Halifax, N.S.,
Jan. 1898

The Woods No. 59 Single or Double Surfacers

A new machine that doubles the output because it runs at a feed of 100 feet or upwards per minute, according to the stock. Equipped with the new **Patented Round Cutter Head and Truing Devices**, and other original features that make it possible to save labor, increase output and improve quality. Built to work 9, 15, 18, 24 and 30 inches wide by 6 inches thick. Fitted with divided or patent narrow rolls, either method having an independent yield to accommodate different thicknesses of boards.

New Model Diamond Shaking and Dumping Grate Bar

The demand for the Diamond Grate has increased by 50 per cent. during the last 2 months and is giving splendid satisfaction to all our customers. Burning all grades of fuel with the very best results. All live Mill Managers and Engineers would do well to consult us when requiring new Bars. **These Grate Bars are warranted not to be an infringement on any prior patents. We stand behind our customers and guarantee them in the unmolested use of our own invention.**

We make a specialty of Boiler Setting and repairs to Boilers, employing none but expert workmen.

We handle Boiler Flues, both new and welded; at lowest prices.

A post card or personal enquiry will bring a prompt reply.

WANTED—EMPLOYMENT

Wanted

POSITION BY AN EXPERIENCED LUM- ber Buyer and Inspector. Box 764, CANADA LUMBERMAN, Toronto. 14

Wanted

BY MAN 45 WITH 20 YEARS' EXPERIENCE buying and inspecting hardwood lumber for all markets, also a good salesman. Box 771, CANADA LUMBERMAN, Toronto. 12

Wanted

POSITION AS STENOGRAPHER OR BOOK keeper, by young man who has had 5 years experience in lumberman's office. Can furnish good references. Box No. 717 CANADA LUMBERMAN, Toronto. 12

Wanted

POSITION OF RESPONSIBILITY IN LUM- ber business where ability and experience will count; twenty years all round experience, log to consumer, in office and yard and on the road. Highest references. Box 731, CANADA LUMBERMAN, Toronto. 11

Wanted

POSITION AS LUMBER YARD FOREMAN in a retail yard—A good grader for pine lumber and a good measurer, used to getting out bills for contractors. Had 12 years' experience and can give good references. Box 774, CANADA LUMBERMAN, Toronto. 12

Wanted

POSITION AS BOOKKEEPER OR CASHIER with manufacturing concern by man with thorough and practical experience in lumber accounting. Also familiar with railroad accounting under commerce commission regulations. Now employed. Box 725 CANADA LUMBERMAN, Toronto. 12

WANTED—EMPLOYEES

WANTED—TWO GOOD FIRST CLASS Band Saw Setters, wages \$3.00 to \$3.25 per day, also other competent sawmill help. PRINCE ALBERT LUMBER CO., Prince Albert, Sask. 11

Wanted

AT ONCE—LIVE YOUNG MAN, HARD- wood selling experience city and Ontario trade. Must be a hustler. Salary and commission. Address Box 768, CANADA LUMBERMAN, Toronto. 11

Wanted

ACCOUNTANT—ONE FAMILIAR WITH cash and door, and lumber business from stump to consumer and who will invest some money in business preferred. State experience and salary expected. Box 730 CANADA LUMBERMAN, Toronto. 11

Wanted

GOOD COMPETENT MACHINE MAN TO take care of an K. J. MacGregor, Gourlay Mather, one small Cowan Machine, and a few cut-off saws. Yearly employment. State wages and when could commence. THE PEMBROKE LUMBER CO., Pembroke, Ont. 11

BUSINESS OPPORTUNITIES

For Sale

SAWMILL, AT THESSALON, FORMERLY owned by N. and A. Dymont. Equipped with 72" Circular, 33 Saw Wickes Gang, Filer and Stowell 4 Saw Edger (run one season), 10" Steam Feed, Steam Nigger and Steam Log Turner. Docks, Tramways, Warehouses, Stables, Blacksmith Shop. All in good repair. Full particulars on application to THE THESSALON LUMBER COMPANY, Nesterville, Ontario. 11

MISCELLANEOUS

WANTED—HEMLOCK LUMBER TO handle on commission, in Western Ontario, good connection. Box 763, CANADA LUMBERMAN, Toronto.

For Sale

ONE COMPLETE SAWMILL ROTARY type, capacity 30,000 feet per day; 2 boilers; engine, 125 h.p., belts, etc. Apply to Box 52 Chapeau, Ont.

Logs Wanted

PRICE AND PARTICULARS OF ONE TO two million feet of Hemlock or Pine logs. Delivered in booms Georgian Bay. Address Box 738 CANADA LUMBERMAN, Toronto.

For Sale

ABOUT 40 ACRES OF GOOD TIMBER chiefly Hemlock, some Maple, Birch, Basswood and Elm. About 40 miles from Toronto and 4 miles from station. Address Box 15 Aurora, Ont.

WE ARE IN THE MARKET FOR CROWN GRANT Timber Limits. Must be well located and good timber. Either British Columbia or Pacific Coast. JOHN C. SPRY, Dealer in Timber Lands, 1430 Corn Exchange Bank Building, Chicago, Ill.

For Sale

ONE STEAM "ALLIGATOR," AT CHA- pleau, Ont. Beam 8 ft., length 34 ft., hull of white oak. Clyde boiler, built in 1907 and is as good as new. For further particulars apply to Drawer B, Sturgeon Falls, Ont.

Wood Preservative

WOULD LIKE TO ENTER INTO AN agreement for the exploitation of patent relative to a new and very effective process for the preservation of wood increasing its durability and resistance. Box 753 CANADA LUMBERMAN, Toronto.

Sale of Valuable Timber Limits

THE UNDERSIGNED ARE INSTRUCTED to sell by Public Auction en bloc, at the Russell House, Ottawa, on September 30, 1909, at 2.30 p.m., the following Timber Limits situate in Block A, Upper Ottawa, Province of Quebec, viz:

Berth 676 Licence No. 380 of 1908-09, south half Lot 16, Range 4, Block A, 25 square miles; Berth 677, Licence No. 381 of 1908-09, south half Lot 14, Range 3, Block A, 21½ square miles; Berth 611, Licence No. 382 of 1908-09, Grand Lac Victoria, River Ottawa, 19 square miles; Berth 678, Licence No. 383 of 1908-09, south half of north half Lot 16, Range 4, Block A, 9½ square miles; Berth 679, Licence No. 384 of 1908-09, north half Lot 16, Range 3, Block A, 15½ square miles; Berth 680, Licence No. 385 of 1908-09, north half Lot 15, Range 3, Block A, 18 square miles; Berth 681, Licence No. 386 of 1908-09, south half Lot 17, Range 5, Block A, 25 square miles; Berth 682, Licence No. 387 of 1908-09, north half Lot 16, Range 5, Block A, 25 square miles; Berth 686, Licence No. 388 of 1908-09, north half Lot 17, Range 4, Block A, 25 square miles. Total 183½ square miles.

These limits are all surveyed and are easy of access by a good roadway from Ville Marie to their location. They comprise some of the best pine and pulp wood areas in the Province.

Terms—10 per cent. of the purchase money to be paid down at the time of sale, and the balance in equal instalments at one (1), three (3) and six (6) months thereafter with interest at the rate of 5 per cent. per annum.

For further particulars and conditions of sale apply to the Royal Trust Company (Ottawa Branch), and to Code & Burritt, Solicitors, Carleton Chambers, Ottawa.

Dated this 31st day of March, 1909.

THE ROYAL TRUST CO., Ottawa,
Trustees of Sale.

Primitive Timbering Methods used in Siberia.

At present, with the possible exception of the Anstration Company, timbering in eastern Siberia is done in a very primitive manner, meeting only local demand. Most of the timbering is done along the Usuri and the Chinese Eastern Railroad, and but very little on the seacoast. The cost of square logs in Vladivostok is now about 11 cents per cubic foot, at least 70 per cent. of which is railroad freight. About 1½ cents per cubic foot are added for cartage and

loading. At Nikolaevsk the cost of timber in round logs is about 5 to 6 cents per cubic foot, alongside the steamer, but if modern methods were employed the cost could be reduced to from 3 to 4 cents, or possibly less.

Pine does not grow in the maritime provinces, but it is to be found only on the Upper Amur and in the valleys of its northern tributaries, the Zea and the Burea, where it grows in large forests, the trees often reaching the size of rough spars more than 100 feet high and four feet in diameter. The trunk is very straight and clean almost to the top. The wood is of a very high quality, light-yellowish or rose colored, fine grained, and takes a high polish. All these qualities make the Siberian pine superior to any other far-eastern timber, not excluding the cedar (*Pinus manchurica* Rupr.), which is locally considered the best.

Reasons for Cutting Timber during Winter Months.

It has long been known that winter was the best time of the year for cutting down trees for their timber, but until the American Bureau of Forestry published the results of some experiments no one was sure why. The Bureau of Forestry selected four pine trees of the same age and of equal vigor, growing in the same soil, and felled them, the first at the end of December, the second at the end of January, the third at the end of March. They were hewn into logs of the same size and dried at the same place. Then the logs were tested.

The December log resisted a flexible strain twice as strong as that which the March log resisted. It furnished piles which were still perfect and undecayed 16 years later, while the piles made from the March log rotted within three or four years.

Wood that is felled in December is less porous than that cut at other times. It has been proved that oak felled in the spring allowed water to percolate through it in from two to three hours.

Encouragement for Match Industry at Winnipeg.

United States Consul-General J. E. Jones, of Winnipeg, in a recent report says:

Manitoba, and more especially Winnipeg, its metropolis and controlling business centre, has not as yet reached the manufacturing period in the course of its industrial development. Lumber, bricks, and other articles which might be denominated "first aid to the settlers," are amply produced. Even large quantities of lumber are exported from the eastern part of this province, but varied manufactures exist only in the experimental stage, quite limited in numbers. The announcement, there-

fore, that a \$40,000 stock company has about completed the establishment of a match factory at Selkirk is of much interest. Winnipeg is giving encouragement to the enterprise by providing trade and market facilities for the product. The plant will have a capacity of fifty 10-gross cases per day, and will employ about 60 hands. All classes of matches which the trade demands will be manufactured.

Selkirk is on the west bank of the Red river, 22 miles north of Winnipeg, at the head of deep-water navigation from Lake Winnipeg. It is a midway station on the Lake Winnipeg branch of the Canadian Pacific Railway, and is the terminus of the best suburban electric railway line running out of Winnipeg, with facilities for carrying freight. It is in the midst of an extensive district covered by a thick growth of native poplar.

The sawmills in the forests which occupy the shores and islands of Lake Winnipeg produce enough slabs, which the lake renders easy of transportation. Native poplar is abundant and cheap. At the end of winter the Indians of the reservation come to Selkirk with great trains of ox teams, drawing sleds loaded with poplar wood, which sells for \$2 to \$2.50 per cord delivered. During these few weeks the residents lay in their supply of cord wood for the next winter season. The wood is light and burns rapidly. It is proposed to use this variety for the match splints, for which it is well adapted.

There are three other Canadian factories in operation, which have a combined working capital of \$250,000, one of which, with \$190,000 capital, largely controls the trade. The three factories employ 278 hands, while the 24 Canadian match factories operating in 1871 employed 1,127 hands. The small factories have been closed up.

Australia's Hardwoods.

According to the reports of the Canadian Department of Trade and Commerce, it is estimated that over 9,000,000 acres are covered by forests of hardwoods in western Australia. The exports of jarrah and karri timber in 1903 were valued at £708,000, but in 1907 the output had decreased to £511,000 owing to a prolonged labor dispute between the owners of the mills and the lumbermen. The demand for jarrah timber for railway sleepers, street blocking, and for piles for wharves is constant both within the Commonwealth and for export. Jarrah hardwood weighs about 70 pounds to the cubic foot when green, and about 60 pounds when seasoned. It is deep red in color and is easily worked and takes a brilliant polish. The hardwood industry in western Australia is, in the main, controlled by an amalgamation of a number of original competing companies, although there are several independent sawmills throughout the country.

Wood Bending in Japan.

The latest example of Japanese imitative genius has been shown in the establishment at Tokio of a bent-wood factory. The import of bent-wood furniture into Japan annually amounts to \$100,000 gold, and a certain Mr. Sato has succeeded, after strenuous efforts for several years, in turning out excellent bent-wood furniture with Japanese materials. Whereas, for instance, an imported bent-wood chair costs \$1.35 to \$1.75, the new factory is said to be able to supply a similar piece of furniture, not inferior in quality, at 75 cents to \$1.15. It is stated that the factory is already doing a large business.

The New Brunswick Cut.

It is reported from several good sources that the lumber cut in New Brunswick during the present season will be larger than last year. Driving operations will not be started for some time yet. The ice in the greater part of the river remains intact, and while it will probably run within the next few weeks, driving will not begin in earnest until the latter part of April or early in May. The prospects for a good season are apparently brighter, and it is to be hoped that the merchants will not experience such a hard season as 1908, when the conditions were the worst in years. The operators themselves express the belief that the British market will right itself this season.

second-hand machinery of any kind? Many a mill man or manufacturer has one or more machines for which he has no further use. They may be in good shape but for some reason or other they have been displaced.

Somebody Wants To Buy

just such machines. You can get in touch with that somebody by advertising in the "Wanted and For Sale" Department of the CANADA LUMBERMAN AND WOODWORKER. A trifling expense will do the trick.

Review of Current Trade Conditions

Ontario.

Ontario markets generally are dull. There is a fair amount of business only, and prices are unchanged. The hardwood markets, though unchanged, are not encouraging. High grade stuff is hard to get and easy to sell at good prices and low grade stuff can scarcely be given away. The unsettled condition of the markets is partly due to doubt about the United States tariff. At Ottawa the prices of lumber are generally firm and there are decided indications of improvement in some lines. Spruce logs are firm at from \$12 to \$14 f.o.b. at the mill and the demand at these figures is better than it has been for a couple of years past. Enquiries for birch are increasing somewhat and the sales indicate an improvement for this class of lumber. Prices for white pine are strong and the trade is active. Stocks of upper grades which have been held over from last year are selling well. There is a good demand for pine laths, especially for the cheaper grades and for shingles, on account of the great local building activity. The upper grades of shingles and lath are selling well.

Eastern Canada.

The trade in short lumber is rather quiet, most of the stock moving being in cargo lots of mixed shingles and lath or lath and boards. During the month of May the shipments of cedar shingles were fairly heavy and stocks at present are only average. There has been quite a good trade in Ex. No. 1's and second clears with prices varying from \$1.20 to \$2.20 f.o.b. St. John. Extras and clears have comprised the greater part of the recent shipments to New England ports. It is expected that there will be an average production of cedar shingles if the present indications of a good drive are borne out. There have been rumors to the effect that cedar shingles are weakening in price. This seems to have originated from Boston, where the demand is a trifle dull. It is not expected that this dullness will continue or that it will affect the St. John prices. Extras are selling at \$3.10 and clears at \$2.60 f.o.b. St. John. Lath are also steady and the demand is good, although buyers are looking for declines. These have not as yet materialized and prices are \$2.85 to \$2.90 per thousand for dutiable slab lath. Eastern spruce at Boston is reported a trifle weaker. Frames are quoted at \$1 a thousand less, with few sales at better than \$24 for 9-inch and under, while most manufacturers would be pleased to receive this price. Buyers are looking for further declines and are holding off. The demand for random is only moderate, with prices about steady, though buyers are expecting lower prices. Boards are in fair demand with prices steady. Shingles have been in poor demand at Boston, where it is reported that one of the best manufacturers has reduced his price ten cents, making the top price for cedar extras \$3.90. Lath are quiet with prices only steady, quotations ranging as follows: 1 5/8-inch, \$3.90 to \$4; 1 1/2-inch, \$3.60 to \$3.65.

Western Canada.

There is a good demand for the lower grades of lumber at Vancouver, but prices are greatly disturbed by the inability of manufacturers to stick to list prices. In spite of this, however, there has been an appreciable advance in prices during the month of May. Fir logs are selling at \$9 to \$10 and finished lumber at \$10.50 to \$11. This leaves no margin for the manufacturers. In fact were it not possible sometimes to get a little better profit on the higher grades, the manufacture of lower grades would result in serious loss. At present it is impossible to even matters up by securing good prices for higher grades. The price of logs

seems to be depressed a little by logs from across the border. Shingles show no noticeable change. Orders from the prairies are plentiful and also from eastern Canada, with the base price still at \$2. Clear Stars are excluded from the United States markets at present by the low price of the American article, viz., \$1.65. The timber market is dull, as a result of high prices. It is now being offered at figures from \$1.50 to \$3, against the former price of about 35 cents before the Government increased its charges. In connection with the log market it is noticeable that the quality is declining annually and the percentage of culled logs placed on the market keeps increasing. In the face of this, however, the price of logs has been keeping the profits of manufacturers so low that their business has been very unattractive.

Great Britain.

Business conditions are quiet in the f.o.b. markets and are not expected to show much activity for some time to come, or at least till importers see their way more clearly than at present. London stock deliveries continue light though they are regarded as perfectly satisfactory because they run on all fours with dock stocks and auction sales. The London spot market continues quiet with firm and steady prices. At Churchill & Sims' auction sale on Wednesday, May 12th, spruce was in demand, unsorted Quebec and 3rds regulars, both bringing £9 15s., and 4ths £9 10s. In pine, 1st and 2nd 3x11, 13-foot, both sold at £23, and prime unsorted Oregon 6-inch brought 1s. 7d., the 4-inch going at 1s. 6d. At Liverpool there is practically no change to report. Business is quiet, though there is said to be a slightly upward tendency for some articles. In some directions there is an advance in value, more particularly in spruce deals. In view of the arrival of the last shipment by liner of spruce deals from St. John and the probability that a month will elapse before the first arrival of a cargo, it is interesting to glance at the stocks at various ports. At the Channel ports there are very small stocks all around, while there is a scarcity of 2 1/2 x 7, 3 x 7, and 3 x 11. At Liverpool stocks are large enough, the only scarcity is in scantling sizes. Manchester stocks are perhaps lighter than they have been for years, 6-inch scantling being particularly scarce, while 2 1/2 x 7 are almost cleared out. 3x7 are also scarce, and 3x11 are hard to find, though their scarcity is not felt to any marked degree, as European deals are being largely substituted. At Garston, Preston, Fleetwood and Barrow, stocks all round are particularly low and fresh arrivals should be welcomed. The outlook at Manchester is better though there is no sensational buying.

United States.

Northern pine at Chicago is reported to be in fairly good demand with prices for No. 2 well maintained, and a fair amount of business being transacted. Box shooks are in fair demand and some fairly large sales of shipped lumber and clear boards are reported at fair prices. It is thought that northern pine is stronger at Chicago than any other of the soft woods, and the indications are that prices will remain firm. There has been quite an improvement in the quantity of business in hemlock at Chicago, and requests for prompt shipment show that the stock is for immediate use. Wholesale yards in Chicago have also taken a good quantity of hemlock. Prices, however, are remaining unchanged, as yellow pine competition is still having a strong effect. Fir at present cannot compete with yellow pine at Chicago except for long lengths. Western pine remains unchanged with prices firm. Red cedar shingles are somewhat easier and the country yards are buying in fairly large

quantities at low prices. White cedar shingles, standards and extras, are in fair demand. Lath also are selling pretty well. There is little change in the cooperage market, as coopers are well supplied and are not meeting with much encouragement in the way of demand for their own products. At New York there is a moderate demand only, for northern pine. Prices are more uniform. The demand for hemlock is somewhat lighter.

Market Correspondence

Ottawa Industries Suffering from High Water.

Ottawa, May 26.—The lumber industry in the Ottawa valley has received an immense blow from high water, which has stopped manufacture, hindered shipping by barges, damaged stock in the yards and endangered the safety of logs held in storage booms. Mill owners estimate that the high water will cost them altogether half a million dollars, when the loss of power which will inevitably follow in a few months, as a result of the present waste, is considered. Shepard & Morse Company, whose mill is driven by steam, was the first of the Ottawa mills to cease operations. The mill pond was deluged to an extent that made it impossible to run. Two hundred men were laid off as a result, and will probably not resume work for two weeks. J. R. Booth had to close his sawmill and sulphite factory, and his pulp and paper establishment may yet be stopped. Fifteen hundred men, or half his staff, are temporarily idle. The sawmill platform was covered with water and the wharves so flooded that the lumber barges could not reach them. In fact every wharf in the upper Ottawa is under water, many of them for the first time in the memory of the lumbermen. W. C. Edwards Company had to close its Rockland mill, and the Hawkesbury Lumber Company at Hawkesbury, Fraser & Company at Deschenes, and Ritchie Brothers, of Aylmer, were similarly affected, and the MacLaren Company, at Buckingham, may have to close at any time on account of the rapid rise in the Lievre river.

Sawing in most mills was nearly a fortnight late in starting, and the present setback will have another marked effect on the year's production. With the market so well supplied, this phase of the high water is not regarded as serious. Lumbermen are complaining most about the submerging of their piling grounds, where the water is doing great injury to sawn lumber. Its value will be deteriorated from \$3 to \$5 per thousand, according to the quality of the lumber. Any damage at all to lumber now means a reduction in price with the market so quiet. Much of this injured lumber was sold, but the buyers are expected to demand reductions all around where the stock has been visited by water.

The lumbermen have been carefully inspecting their booms along the Ottawa, lest the over-pressure should cause them to break and send millions of logs rushing down the river, probably destroying some of the mills at the Chaudiere. The fact that the record depth of last year was surpassed before the ice had left some upper tributaries made the situation look ominous. Another foot of water, or a high wind, would have demolished booms. Altogether about three million logs are stored between Ottawa and Temiskaming. If a single boom broke the logs would be sent forward with such violence as to carry all the other logs before them. There are half a million at Thompson's Bay boom, the first going west from Ottawa; four hundred thousand at Quyon; one million at Snow boom, Arnprior; and the remainder distributed at Allumette, Coulange, Fort William and DesJochin's booms. There was ice on the Kippewa until this week and so serious was the outlook from the increasing volume of northern waters that the river drivers took the precaution of not moving any logs lest the disturbance should increase the strain on the booms. All the steamers of the Upper Ottawa Improvement Company, which in other years were busy at this time, are still idle, and the G. B. Greene, which usually makes its initial trip on May 24th, will not start until the second week in June.

At different points along the river measurements are taken to show how the river compares with other bad years. On May 21st the water was seven inches higher at Quyon than on the worst day last year. At the foot of the Rideau locks the water is now 27 feet deep, which brings it within two and a half feet of the remarkable record made 33 years ago, and which never since was so nearly approached. In 1893, the year of a memorable flood at Ottawa, the depth at this point, where the Government measurement is always taken, was 26 feet.

The engineers figure out that the volume of water now rushing over the Chaudiere Falls amounts to 250,000 cubic feet per second. This is an enormous waste, and there is no doubt that the volume will be reduced to about 12,000 cubic feet per second before the manufacturing season is over. A normal quantity of 100,000 cubic feet or a little over is what manufacturers most desire, and for that reason the agitation for conservation dams on the upper Ottawa and its tributaries has been renewed. Mr. Peter Whelen, president of the Ottawa Board of Trade, at its annual meeting in the winter, urged strongly that these river works

should be built, pointing out that all industries depending on water power would suffer every year both from high water and extremely low water until the flow of the river was controlled. His estimate placing the loss at half a million dollars was not disputed by anybody. The precipitation of rain and snow, it is held, could not have caused the present expansion of the Ottawa river. It is attributable to the absence of dams on the upper Ottawa and its tributaries, a region which, since the forest has been cut down, is neglected. Thus water which in the early stages of the Ottawa valley lumber industry would be held back until summer, now bursts free as soon as the ice goes. Lumbermen and other users of power want the Dominion Government to carry out the erection of dams according to the survey and estimates of their own engineers made four years ago. It used to be considered that when the water was high one year there would be from 15 to 30 years of security from another flood. But this year's high water following conditions last year that were surpassed only in 1893 and 1876, shows that there may be a waste and consequent famine of water every summer. This is due to the great territory that is burned over, as well as the fact that lumbermen are exhausting their resources and each year going farther into the forest. Many of the upper Ottawa limit holders, especially those on the north side of the Ottawa where the water used to be held by dams, have cut off their forests and have no interest in keeping back the water as they had formerly for spring and summer drives. These dams are now open and the water runs off with the early floods every spring.

Carefully compared statistics and records show that an early waste of water now is more serious than in past years. In 1876, when the volume over the Chaudiere at high water mark was 250,000 cubic feet, the minimum volume that year was 15,000 cubic feet. Last year with about the same maximum the minimum dropped to 12,000 cubic feet. The minimum in 1908, a year of high water, was only 1,000 cubic feet better than the record low water year of 1877, when the greatest volume was 83,000 cubic feet. It is contended that the improvement required to control this water could be provided for as much money as is lost in one season of floods and lack of water power.

Lumber quotations continue steady with a sign of improvement in some lines. Spruce logs are firm at from \$12 to \$14 f. o. b. at the mill, and there is a some- in the last couple of years. A local manufacturer has received enquiries for two and a half million of spruce, and his quotations also point to strengthening the market, although the sales have not yet been made. A buyer has been looking for three-quarters of a million of birch, and some sales have been made indicating an improvement in that class of lumber. J. R. Booth and Shepard & Morse Company are doing an active business in white pine, and prices are holding out strong. Middlemen who held stock over from last year rather than sell it at a loss are pleased with the outlook for selling the upper grades of pine at a little advance on prices ruling a year ago. The building season in Ottawa and vicinity is one of the briskest in many years, except that following the great Ottawa fires. There is a consequent good demand for cheaper grades of pine lath and shingle, while the highest priced lath and shingle are pretty well sold up to outside buyers.

A Late Driving Season in New Brunswick.

St. John, N.B., May 22.—Since last writing the situation in regard to the stream-driving of logs has passed through many phases and has been marked by many rapid changes. Since the 15th of May, driving has been going on generally along the head of the St. John river and the farther up river branches. While news of the driving is very meagre it is known that driving operations have been so far quite successful and, while there is always an element of uncertainty, there is a probability that a clean drive will be made in nearly every case. The season is a fortnight later than usual and the first of the new logs will be as much later in reaching the local sawmills.

The usual difficulty arising from the action of the lumber manufacturing concerns at Van Buren (on the Maine side of the St. John) in holding the logs until theirs have been sorted out, has again materialized. The controversy in regard to this matter has been long and bitter, the down river lumbermen claiming that when the logs are held the chances of getting them driven out are greatly jeopardized. Reports from Van Buren state that quantities aggregating 10,000,000 feet have been in the sorting booms at Van Buren during the past few days. The owners of the mills at Van Buren claim that there have been no more than five millions at any time this spring. The members of the International Waterways Commission paid a visit a short time ago to the section where the Maine people have been holding the logs, and had an opportunity of seeing for themselves the condition of affairs. Local lumber firms are awaiting with much interest the finding of the commission in this regard.

The trade in short lumber has shown no startling features during the past fortnight. Trade in these lines is confined to cargo lots and in many cases these cargoes are mixed, part shingles and part lath, or part boards and part shingles. Shipments of cedar shingles from this

Sleeper & Akhurst
Coaticook, Que.

port have been fairly heavy during the month of May and stocks are gaining very slowly. The inter-provincial trade in "Ex. No. 1's" and "2nd Clears" has been decidedly good, the ruling prices being \$1.20 and \$2.20 per thousand f.o.b. St. John. Shipments to New England ports have consisted almost entirely of "Extras" and "Clears."

The prospects for the production of cedar shingles at local mills indicate that, should the logs come out without difficulty, as present prospects would indicate, the season's product will be about the average. There is no tendency on the part of local manufacturers to increase their output even should the present good prices continue to reign; the volume of offerings from this direction will be no greater than when the Boston price of "Extras" was \$3.40 to \$3.50 per thousand. Local holdings of cedar shingles would aggregate to four and one-half millions. Of these two and one-half millions are "Extras" and "Clears," the balance are low grades.

It has been persistently rumored that prices of cedar shingles had weakened. Beyond reports from the Boston markets that the demand has slackened a trifle there is apparently no real cause for any bearish tone. The depression is looked upon as of a temporary nature and as unlikely to have any local effect. "Extras" are being quoted locally at \$3.10 and "Clears" at \$2.60 dutiable stock, f.o.b. schooner St. John.

The lath trade has shown little fluctuation for many weeks past, having preserved practically all through the winter a uniformity which, for this line of business, is truly remarkable. Local prices have shown little change throughout the period mentioned above, nor have there been any deviations from the regular groove of business as far as prices are concerned. Local demand seems fairly strong, although not too great to eliminate entirely the chances of a weakening of the price. Buyers are asserting that such a weakness is due, but so far there have been no manifestations to warrant such a belief; developments, on the other hand, tend to the conclusion that prophecies of this nature are more in the nature of a guess. \$2.85 to \$2.90 per thousand are the figures now being quoted enquirers by local people for dutiable slab-lath and these prices may be taken to indicate the market value of this line of goods.

Between Seasons in the Cooperage Business.

The situation in the cooperage industry in Ontario is well outlined in the following account from Mr. J. Innes, of the Sutherland, Innes Company, Chatham, Ont.:

At the present time it is just between the seasons in the cooperage industry. The old stock carried over from last year is pretty well cleaned out, and on account of the broken weather and the late spring, very little new stock has come on the market. There is, consequently, a considerable dearth of dry material suitable for present consumption, and prices for prompt shipment have advanced, more especially on staves, the addition in price over last fall, however, not being any more than the cost of carrying the stock, namely, about 6 per cent.

The logging is now all over, and mills are able to figure up about what their production will be for this year. The stocks at the mills, in Ontario, or rather the southern portion of Ontario, are light, as there was very little snow for logging, and consequently very few of the mills have got any more than from six weeks' to three months' run. In the northern part of Ontario, on account of the light snow, the weather was favorable for logging, and fairly good stocks have been put in.

The production this year will be considerably less than last, as the largest producing mills are in the southern part of Ontario, and their spring run will be very light. It all depends upon whether or not there is a dry summer, as to the fall run at these mills.

Prices, if anything, are a shade lower than a year ago, as the consumption last year was above the normal.

So far this season has opened up very well. While wheat has been high, the amount of flour barrels has been in excess of 1908, and nearly equal to 1907.

The general trade throughout the country has improved, and consequently there is more demand for barrels for the general trade. The fruit trees have come through the winter well, and if nothing untoward happens during the flowering and setting season, there will be a good, fair apple crop this year. In fact, reports would indicate a "bumper" crop, but there is many a slip between the cup and lip, and the apple shippers prefer a good, fair crop to a large one, as the prices for apples are better, and most of the apples are barrelled.

The consumption of sugar barrels has increased during the last two years, the consumers realizing that the barrel is the only sanitary package for sugar, as sugar shipped in bags is liable to contamination from different sources, and, to say the least, it very often arrives at its destination in an uncleanly condition.

The consumption of barrels for salt has also increased, as the Northwest trade demands its salt in barrels, and this business is getting larger every year. The Northwest trade also demands quite a quantity of its lime in barrels, and this is another large source of consumption.

Indications, so far, are that there is going to be an exceptionally

good year in the cooperage industry, with fair prices for stock, and as the demand is steady, there are not likely to be the fluctuations, which are the bane of the manufacturer and cooper, as a regular diet is always much better than a feast or famine.

Trade Conditions in Barbados.

S. P. Musson, Son & Company, Barbados, report under date of April 24th as follows: Lumberstuffs—White pine—Receipts during the fortnight consist of 102,000 feet ex schooner "Freedom from Lunenburg" to selves, for which we obtained \$30 for merchantable and \$21 for second quality. There is an opening for another small cargo or two. Spruce—The schooner "Freedom," alluded to above, brought 154,000 feet, which we had some difficulty in placing at \$20 for merchantable and \$15 for second quality. The schooner "Frances A. Rice," which arrived on the 19th from Belliveau Cove to selves, brought 109,000 feet, and this being a smaller quantity, we managed to obtain \$20.50 and \$16.50 for it. The market is fully supplied for the present and fresh arrivals would hardly realize late prices. Pitch pine—No arrivals, but there is a cargo now on the way. Shingles—The schooner "Moravia" arrived on the 10th inst. with 1,174,000 cedar laying shingles, consisting of half each Extra No. 1, and No. 1. Consignees obtained \$2 for former and \$1.85 for latter. Another cargo of this size would sell well. In Long Gaspé a lot of 175,000 ex Oruro were stored by consignees, and another small lot of 95,000, which had been in store for some time, were sold, price realized being \$4.80. Shooks—No receipts, but stocks are ample. Wood hoops—Receipts consist of 400 bundles imported by a dealer. Stocks are heavy and market lifeless.

The Year's Trade in Pulpwood and Paper.

The following figures have been given out in Ottawa by the Canadian Customs Department, showing certain features of the Dominion's trade in pulpwood and paper:—

During the fiscal year (ended March 31st, 1909) the quantity of pulp exported was: To the United States, wood pulp, chemically prepared, 769,514 cwt., and mechanically ground, 3,033,885 cwt.; to Great Britain, chemically prepared, 13,660 cwt., and mechanically ground, 973,598 cwt. The export of paper during the same period was: To the United States, wall paper, rolls, 19,974, valued at \$6,440; felt paper, rolls, 109,863, valued at \$101,835; wrapping paper, 594,695 pounds, valued at \$24,264; printing paper, valued at \$791,533; paper of other kinds valued at \$34,673. To Great Britain, wall paper, 512 rolls, valued at \$159; felt paper, 5,060 rolls, valued at \$21,896; printing paper to a value of \$922,278, and other paper to a value of \$354,887. During the same period 901,861 cords of pulp wood were exported to the United States.

The Department of Trade and Commerce has issued a statement showing a considerable decline in the importing of printing paper from the United States. For the nine months ended December 31, 1908, the value was \$145,000; the corresponding nine months of 1907, \$231,000; corresponding nine months of 1906, \$274,000. The imports of printing paper from Great Britain range from \$135,000 to \$165,000 for each nine months, and only a trifling amount was imported from any other country.

The sales of wood for wood pulp to the United States have increased. In the last nine months of 1908 the value was a little over \$3,500,000, compared with a shade above \$2,000,000 for the corresponding term of 1906. No other country was a purchaser from Canada. In wood pulp the sales in the last nine months of 1908 were \$2,000,000, the same as in 1908, and \$750,000 less than in 1907.

Tariff Reduction Likely to Carry.

Ex-Senator Peter Jansen, of Beatrice, Nebraska, vice-president of the Fraser Lumber Company, visited Vancouver recently on business. He received a letter from Mr. E. H. Henshaw, representative in Congress for the Fourth District of Nebraska. Mr. Henshaw wrote that it is a certainty that the tariff bill when finally passed will show a reduction of 50 per cent. in the duties on rough lumber. The champions of free lumber, he added, are now at work lobbying for a reduction in the duties on upper grades, now ranging from \$1.50 to \$3.50 per thousand, with good prospects of success.

The large booms of logs at the mouth of the Blanche river and Wabisk creek have broken away, and are now scattered all over Lake Temiskaming. There are over one hundred thousand logs now floating in the lake. The Wabbits is blocked with logs still coming down the swollen stream. Lake Temiskaming is higher now than it has been known to be for many years. The latest reports were that the water was still rising, as a result of the rapid melting of the snow in the far north and the incessant heavy rains.

News from the Camps and Drives

Rafting Operations Progressing Favorably in New Brunswick—Pacific Coast Camps Active—Forest Fires in Nova Scotia

Reports from St. John, N.B., state that rafting operations have begun at the Douglas boom with a crew of 50 men. There are about 6,000,000 feet of logs in the Douglas boom and between 25,000,000 and 30,000,000 feet of logs in the boom at Sugar Island. Four million feet have come in lately. Randolph & Baker's drive was at last accounts within two miles of the mouth of Grand river. Their other drive in Blue river is out into the main St. Francis.

John A. Morrison received a telegram recently from his son, R. A. Morrison, that the main drive, of which he is in charge, was going by Seven Islands, and that the water was then at good pitch. Mr. Morrison's total cut last winter amounted to about five million feet and some of the logs had been running into the booms for several days past.

There has been a better run of logs into the St. John River Log Driving Company's booms during the past few days, which would indicate that the St. John Lumber Company are conducting the sorting gaps at their booms at Van Buren (Maine) with more dispatch than before. Logs from the drives at the most remote sections of the head waters are running into the booms, an indication that the drives are all coming along well. A good many of the St. John Lumber Company's American logs have come into the booms.

Hon. Charles A. Oak states that the Miramichi Lumber Company's drives are all coming out and are now in safe waters and that other drives on the Miramichi will also come out. The Miramichi Lumber Company's drives on Texas river and on the Sisters and Dungarven streams are already out. Michael Welch's drive is already in safe water. The Miramichi Lumber Company's total output this season is less than 20,000,000 feet, about one-half of last year's cut.

The mission ship "Columbia," which visits the various camps in the lumber district from Van Anda to Alert bay, on the British Columbia coast, recently made port at the Hind Brothers' wharf after a two months' trip among the camps and hospitals of the mission. She left again shortly for another long stay on her regular work.

The "Columbia" brought down interesting news from the lumber camps. At the Rock bay camp of the Hastings Mill Company, it is stated that the eight miles of logging railroad being constructed there are practically completed, and the smaller stretch of road at the company's Camp Bow camp is also done. The Fraser River Mill Company is in the full swing of the season's work. At Loughboro inlet a new sawmill, containing 26 shingle machines, has just been completed and is about to start work. The Imperial Mills Company camp is also in full swing.

Advices are brought down that none of the camps has had trouble in securing plenty of labor for the season's work. The Alert bay hospital, newly completed by the mission, will be opened about July 1st. It is all ready now except for the furnishing.

According to further advices the plans for the mission's new 96-foot gasoline power boat are completed, and the probability is that the vessel will be built in Vancouver. The new boat is to be much larger in every respect than the "Columbia," being designed for heavier work and the factor of speed will also be an important one.

On the trip up the "Columbia" took a physician and nurse, who are going to one of the company's hospitals.

The forest fire, which was recently raging fiercely back of Annapolis, Royal, N.S., was brought under control about May 18th. The fire ran in the heart of the timber district, and the efforts of the rangers were directed to keeping it in the young growth and brush lands. At one time some of the most valuable timber land in western Nova Scotia was threatened, but later the greater part of this was saved. The burned district is between four and five miles in length, according to the best information obtainable, and the width varies from a quarter of a mile to over a mile. Some of the finest young timber in Annapolis County was destroyed. Several times the fire was thought to be under control, only to spring up again. Every available man and boy from the surrounding districts fought the flames. The burned areas are owned by Annapolis parties. A. D. Mills & Son and Rufus Hardwick will be among the heaviest losers.

Hardware firms and grocery concerns in British Columbia report that business was never better. They attribute the activity to the number of camps starting up along the coast. This, no doubt, means that the loggers are all busy.

Long Logs
and heavy logs are handled
just like any other kind by the

McGIFFERT Log Loader

It does heavy work and lots of it and does it
under many conditions impossible by other
methods. It saves money in skidding too.

Does a saving of from 25 to 50 per cent of your power cost interest you?

Mr. Manufacturer:—

You know that your one best step towards greater profits is reduction in cost of production.

You also know that one of the big items of cost is power—perhaps the biggest.

Now wouldn't it interest you—wouldn't it mean money in your pocket—if you could save from a quarter to one half of what your power is costing you to-day?

Now it is just that saving we wish to tell you of. Even though your plant is equipped much above the average, it is to your interest to know about this still better system.

We want to give you all the facts about Western Electric Induction Motors and prove to you conclusively what saving in dollars and cents and what increase in efficiency that system of power will effect in your plant.

CIRCULAR SAW

Look your plant over and figure out how many tons of metal you keep rotating over the heads of your workmen and how many square feet of belting you keep travelling at express train speed.

It takes power to keep that mass of non-productive machinery moving. Power that costs you money and adds nothing to the production of your plant.

Twenty-five to fifty per cent of power developed by your engine is lost by the line shaft and belt transmission system.

This fact has been repeatedly proven by actual tests.

You can save this loss—add it to your profits by installing Western Electric Induction Motors.

They can be mounted on the floor, wall or ceiling as required, or on the machines which they are to operate, thus eliminating all belts and hangers.

Western Electric Induction Motors are the simplest of all electrical machines. In operation they are as simple as a shaft rotating in its bearings and require no attention beyond that given to bearings.

The individual motor driven machines form compact units in themselves, thus allowing the workmen to get around them better and do better work. Besides this you pay only for the power used in actual production—only the machines which are actually employed in turning out your product need be kept running.

Western Electric Induction Motors are the result of 30 years of untiring efforts at improvement. That the Western Electric Company have produced \$230,000,000 worth of electrical apparatus during the last five years is a significant fact that speaks volumes for the efficiency of their apparatus.

These are but a few of the facts about Western Electric Induction Motors. If you are interested in increasing the efficiency of your plant—if you are interested in cutting down the cost of your power—write to-day for Bulletin No. 607.

We would be glad to have our engineers look over your plant and prove to you by actual figures what a saving you can effect by installing Western Electric Motors. This service is absolutely free and puts you under no obligation to us.

Write to-day for Bulletin No. 607 and full particulars.

EDGINGS

Ontario

J. R. Booth, of Ottawa, Ont., has about 2,500 men employed in his saw-mill, which is running day and night.

The mill and basket factory of Merritt Bros., at Abingdon, Ont., was destroyed by fire last month at a total loss of \$12,000.

The Department of the Interior purpose holding an auction sale of berth No. 2 on the Dokis Indian Reserve on the French river. The sale will take place at the Russell House, Ottawa, on the 23rd of June, and will be conducted by Wm. A. Cole, the well known auctioneer of Ottawa.

According to a report received at the Department of Trade and Commerce, Ottawa, from E. D. Arnaud, commercial agent at St. John's Nfld., W. R. Hearst, of New York, has purchased 1,000 square miles of pulpwood near Hermitage Bay, Newfoundland, and will invest \$10,000,000 in the production of pulp for paper. He will employ 3,000 men.

The Bancroft Manufacturing Company is a new organization with headquarters at Bancroft, Ont., for the manufacture of wood and other natural resources. It is proposed, at the outset, to engage in wood turning of all kinds, and a commodious four-storey building with a foundation specially suited for accommodating heavy machinery has been acquired.

The Northumberland Pulp Company are asking the Seymour Township Council for a fixed assessment of \$2,000 on a pulp mill, which it is stated they will erect near Ronney Falls. The company ask for a fixed assessment for ten years, and it is said will undertake to erect buildings and works at a cost of \$10,000. A by-law will be submitted to the electors on June 21st.

The plans of the E. Long Manufacturing Company, makers of sawmill machinery, Orillia, for extending their works are now approaching completion. The town council has agreed to offer a by-law to the ratepayers to give a free site, fixed assessment, etc. The company at present pays out between \$30,000 and \$40,000 in wages per annum, the average number of men employed last year being about 50. When the factory is extended they expect to employ from 125 to 150 men.

Dr. B. E. Fernow, Dean of the Faculty of Forestry, University of Toronto, recently returned from Lake Nipissing, where he spent a week in starting the students of the senior class in their practical work in the woods. The limit selected this year was one belonging to the Strong Lumber Company, on the south shore of Lake Nipissing. The students took to the woods like natives, and next morning were hard at work. There are on this part of the limit about three thousand acres of red pine. The territory was burned over clear 175 years ago, and there have been no fires since. While the present stand is all red pine, the new growth is all white pine, and these young trees are coming up at the rate of about two thousand to the acre.

Recent incorporations in this province include: Dunn Lumber Company, Limited, Waubaushe, Ont., incorporated, capital \$15,000; incorporators, W. J. Sheppard, F. M. Gray, both of Coldwater, Ont.; C. H. Sheppard and W. S. Russell, both of Waubaushe, and J. T. Dunn, of Toronto. Sarnia-Nipissing Lumber Company, Sarnia, Ont., incorporated, capital \$40,000; incorporators, W. Logie, D. S. Burnett, C. H. Belton and M. Mackenzie, all of Sarnia, Ont., and A. J. Mackenzie, Toronto, Ont. Saskatoon Piano Company, Limited, Guelph, Ont., incorporated, capital \$50,000; incorporators, J. Brown, A. M. Brown, D. Allan, W. M. Pentelow and R. Logan, all of Guelph, Ont. Dunbar Lumber Company, Limited, Elk Lake, Ont., incorporated, capital, \$40,000; incorporators, J. A. McAndrew, G. H. Kilmer, H. H. Davis, and N. R. Robertson, all of Toronto. Mozart Piano Company, Limited, Toronto, Ont., incorporated, capital \$10,000; incorporators, H. C. Heidman, C. L. Carruthers, G. T. Domelle and others, all of Toronto, Ont. Kingston Pulp Company, Limited, Kingston, Ont., incorporated, capital \$100,000; incorporators, D. Smith, C. A. Macpherson, H. Macpherson and F. King, all of Kingston, Ont., and F. H. Hooper, of Brownsburg, Que. Northumberland Pulp Company, Limited, Campbellford, Ont., incorporated, capital \$100,000; incorporators, I. S. Fairty, E. W. Wright, H. T. Hunter, E. P. Seon and J. M. MacDonnell, all of Toronto.

Eastern Provinces

L. B. Smith's sawmill at Baillie Station, three miles from Fredericton Junction, N.B., was destroyed by fire last month at an estimated loss of \$4,000.

The St. John, N.B., Board of Trade are negotiating with Bonnel & Hardy, of London, Eng., who are looking for a site for the erection of a large paper mill.

Recent Quebec incorporations include: Desnoyers, Varin & Company, Limited, Montreal, Que., lumber manufacturers, etc., capital \$95,000. Incorporators, W. Reed, L'Assomption, Que.; T. Desnoyers, Maisonneuve, Que.; V. Varin, J. C. Lamothe, and others, of Montreal.

At the late meeting of the New Brunswick Lumbermen & Limit Holders' Association, held at Fredericton, a memorial for presentation to the Provincial Government at a later date was prepared. The Hon. J. P. Burchill, M.P.P., of Newcastle, was elected president, and R. A. Lawlor, K.C., of Chatham, secretary-treasurer.

Four lumbermen were drowned recently in the Rouge river, 125 miles north of Calumet, Que. Three of the victims were brothers named Grenier, while the name of the fourth man drowned has not yet been ascertained. All four men were experienced loggers, but on the capsizing of the boat in which they were crossing they were carried under by the current, swollen by the spring rains, before assistance could reach them. All were employees of the Riordan paper mills.

Word has been received from Grand Piles, on the River St. Maurice, north of Three Rivers, Quebec, of the breaking of log booms and the loss of 400,000 logs as the result of high water. The river was ten feet above normal, owing to heavy rains, and melting of snow in the interior. It was realized that the booms at Grand Mere further down would not hold the runaway logs, and they were opened, but an attempt will be made to recover as many of them as possible at Shawinigan Falls or Three Rivers. The loss to the Laurentide Paper & Pulp Company and the lumbermen will be heavy.

British Columbia

David Cook's new shingle mill at Lynn Valley, North Vancouver, B.C., is now in operation.

The Yale Columbia Lumber Company's sawmill at Title, B.C., was destroyed by fire last month.

The Canadian Pacific Timber Company's mill at Gerrard, B.C., is to start operations very shortly.

The capital stock of the Big River Lumber Company, Limited, has been increased from \$250,000 to \$1,000,000.

The Maycock, B.C., Lumber Company's plant was recently destroyed by fire at a total estimated loss of \$100,000.

At Sidney, B.C., operations will commence shortly on the construction of a sash and door factory. A. Berquist is interested.

The Northern Pacific Lumber Company's sawmill at Barnet, B.C., was destroyed by fire recently at a total estimated loss of \$350,000.

The Lewis Furniture Company has purchased the old Royal Furniture Block at Winnipeg, and will make extensive alterations to same.

The sawmills of the Elk Lumber Company, Cranbrook and Jaffray, B.C., are operating this season, but the mill at Ryan will remain closed.

Plans are being made by Frank Huston for the construction of a sawmill and planing mill in Vancouver. Both mills will be operated by electricity.

Plans are stated to be under way for a large lumber and shingle mill on Esquimalt Harbor, B.C. The names of those behind the project have not yet been divulged.

The big mill of the East Kootenay Company, at Jaffray, was started up recently. The mill is one of the largest in the district and gives employment to a large number of men.

The temporary office of the recently organized British Columbia Lumber, Logging & Forestry Association is located at 25 Jones Building, Vancouver. W. A. Anstie is secretary.

The Western Canada Timber Company, Nelson, B.C., who operate a sawmill on Trout lake, at Gerrard, have established two or three logging camps on the lake to log limits recently secured there.

In a disastrous bush fire which occurred recently the Carlin & Carrigan sawmills on the Salmon river, B.C., were destroyed by fire. The former was valued at \$75,000 and the latter at \$35,000.

The head office of the East Kootenay Lumber Company, formerly at Cranbrook, B.C., has been moved to Jaffray, B.C., the new location of the company's planing mills and shipping department.

Mr. A. MacLaren, president of the North Pacific Lumber Company, whose mills were recently destroyed by fire, states that the erection of a more modern mill will be begun immediately. The new mill will cost about \$350,000.

About sixty men will be employed by W. J. Holcomb & Son, who have completed a sawmill near Rossland, B.C. They have 5,800 acres of excellent timber on Violin lake, and will build a railway three miles long to get at it.

J. W. Prescott, of Vancouver, acting for the owners, sold 2,000 acres on Phillips Arm to a Seattle syndicate that already has 40,000 acres of good timber land in the province. The buyers are said to be getting ready for logging operations this season.

Pugh & Livingstone Lumber Company, Limited, Elko, B.C., is building a new plant with a minimum capacity of 60,000 feet per day, at Dorr. This company has large holdings of timber, estimated to contain 500,000,000 feet, in this vicinity. W. D. Herron is managing director.

R. A. O'Neil, of Detroit, Mich., bought sixteen berths for \$50,000 from C. A. Harrison and C. A. Gass, of Victoria, B.C. Mr. Harrison and Mr. Gass, along with S. Moody, C. Gardiner and S. Heald, sold another area to purchasers, whose names are not given, for \$50,000.

The Gibbons Lumber Company has let the contract to A. W. Dickenson, of Revelstoke, B.C., for the taking out of between twenty and thirty million feet of logs from their limits on Pingston Creek during the next two or three years. This is one of the largest contracts let in the interior.

The Arrow Lakes Lumber Company, Arrowhead, B.C., are building a five-mile logging railroad into their limits at Galena Bay, Arrow Lake. The road has been laid with 56-pound rails and the equipment includes a 30-ton Shay locomotive, 30 Russell logging cars and a McGiffert log loader.

In one day's cut recently the plant of the Ross-Saskatoon Lumber Company, Limited, at Waldo, B.C., turned out 72,000 feet of lumber, all one and two-inch material. This is claimed to establish a record for a ten-hour run for similar rigged plants—a double cutting band mill, without re-saw or gang.

That the millmen in many instances in the Kootenay have as many orders as they can attend to is the report of A. Carney, timber inspector, who recently made a trip through the Crow's Nest Pass district. He predicts that the coming summer will be the best in the history of the industry in the Kootenay.

To inspect agricultural and timbered areas in the Kootenays, five field parties are being sent out by the C.P.R. at a cost of \$25,000. They will spend the summer getting all information possible regarding the location of land for settlement and timbered areas to be developed to supply the demand for lumber in the prairie provinces.

Recent British Columbia incorporations include: Abbotsford Timber & Trading Company, capital \$300,000; Bar Harbor Lumber & Brokerage Company, capital \$10,000; Johnson-Shaw Lumber Company, capital \$6,000; Pitt River Lumber Company, capital \$50,000; Howe Sound & Northern Boom Company, Limited, capital \$50,000; Canyon City Lumber Company, Limited, capital \$150,000; Larson Timber Company, Limited, capital \$500,000.

The lumber cut in the Dauphin, Man., district during the last winter is the largest in the history of the district. The winter was favorable for work in the woods and limits were operated to the fullest extent possible. The estimate of lumber cut is placed at 78,500,000 feet, 25,000,000 feet more than last year. Large quantities of railway ties have also been taken out, and the cordwood cut has been the largest on record. Upwards of 3,000 men were given employment.

The timber sale activity has been centred mostly on the southern end of Vancouver island, where ownership of a number of areas has changed. A New York syndicate, including C. F. Hess, N. M. Watters and Mr. Bond, paid \$60,000 cash for thirty sections at San Juan, held by Andrew Wright, and a number of other Victorians. F. T. Cromwell, formerly of Portland, Ore., put through a transfer of 38 claims from New York to Minneapolis people, the price being \$160,000.

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies are guaranteed never to fail when used as directed. You get your money back if they ever do.

They are

Johnson's Horse Liniment No. 1.

A penetrating Alcoholic Liniment. Put up in one gallon jugs, with full directions, per imperial gal. \$4.50

Johnson's Horse Liniment No. 2.

A combination of the best oils used as liniments, imp. gallon . \$3.00

Johnson's Horse Colic Remedy.

A sure and speedy cure for colic. Imperial gallon \$5.00

Johnson's Veterinary Healing Ointment.

Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada. Put up in 2 lb tins, each . . \$2.25

or in 1/4 lb tins, per dozen . . \$3.50

Johnson's Condition Powders. (Concentrated).

Put up in bulk, per lb . . . 30c.

These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to \$100.

"THE DUNBAR"

New and Improved

STEAM LOGGING ENGINES

Best on the Market

This is the machine for which we claim all the good Qualities possessed by any other and a great many valuable improvements besides.

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

We Make Filing Room Tools

Sectional View of Hanchett Band Saw Swage

The sectional view of our swage shows our new spring bracket which permits the swage to tip forward during the operation of swaging. In this bracket we have preserved our compact construction features. It is practically as strong as a solid bracket, is impossible to get out of order, and is easily adjusted to give any amount of spring desired, or to be rigid and allow no spring.

This new feature of Hanchett swages still further increases the efficiency of a swage which without this improvement has for a number of years been quite generally conceded to have the lead over any other swage manufactured. The spring bracket, in conjunction with the action of Hanchett dies, proves unusually effective in bending the tooth forward so that it may be faced perfectly with little grinding. With this spring bracket with its perfect adjustments, added to the unusually wide range of adjustment of Hanchett swages, the filer can swage his saws to a nicety, and adjust his swage to place the points just where he wants them, and get any amount of hook wanted. We have already received some very enthusiastic letters from filers who have tried the new spring bracket, and they state that with the Hanchett swage thus equipped it will never be necessary to knock the teeth down with a hammer or use any other device for this purpose, as the spring bracket enables the swage to put the point just where it is wanted, and keep a full back. These brackets will fit all the old Hanchett Swages, so that our old customers can avail themselves of this improvement by purchasing from us the new spring bracket.

When the swage is used upon a gang saw, a fork is furnished that has no forward projection, thus making it more convenient for swaging the last teeth at the lower end of the saw.

Hanchett Band Swage Shaper

For the obtaining of the most desirable results, the swage shaper has become an indispensable unit in the filing-room. The utility of the swage shaper for fitting band saws has been demonstrated for many years. The "Hanchett" Band Swage Shaper combines all the elements that go to make an ideal finish to the work of the saw swage. By the shaper every tooth is pressed into perfect shape, as in a mold, widest on face, widest at extreme points, tapering downward from the points and backward from the face, thus making a perfect shape and a perfect clearance. Added to this quality is that of making the shape of all the teeth absolutely uniform.

Let us send you our new 1909 Filing
Room Catalog No. 6. It will interest you.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

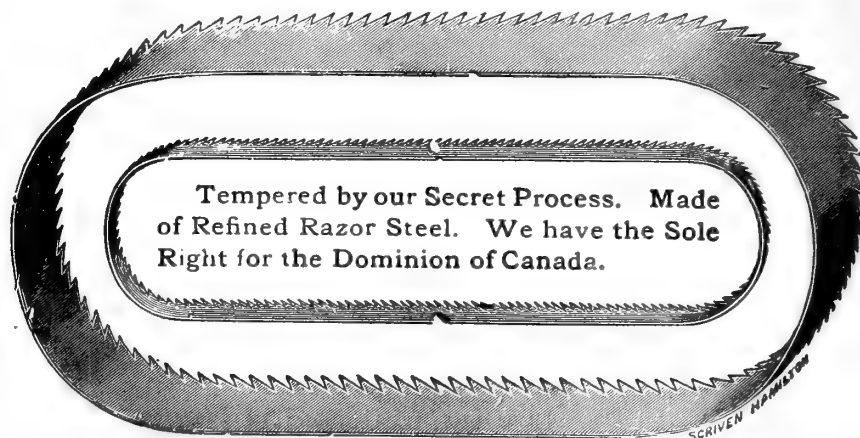

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

No. 38

Detroit Columns

Are Far in Advance

We manufacture colonial columns with the famous Lock-Joint—providing a larger gluing surface and preventing any possibility of shrinkage, common in ordinary columns.

Detroit Colonial Columns

are the standard of excellence—products of extensive manufacturing. They are second to none.

Supplied in any length and style of Plain or Quartered Oak, Chestnut, Yellow Pine, Birch, etc.

Retail dealers should investigate this trade winner.

"I Am Convinced
**Simonds
 Shingle
 Saws**
 Have Saved Me Money"

A man bought nine 40 inch Simonds Shingle Saws. He wanted the best and paid the price. He knows whether he won or lost on the deal. A careful record of Shingle Saw cost was kept, with the result that after a few months the record showed, in that mill, the saw cost per thousand shingles cut to be slightly less than one-half of one cent. About 9 cent saw cost for twenty thousand shingles.

That is why this Millman said he was convinced Simonds Saws are *money makers* because they are *cost savers*. This is a statement of fact. We have the proofs and

will gladly show them. If you want low cost use the right saws—Saws made of Simonds Steel, made by Simonds Methods. Dollar for dollar value is given. A saw to sell for less money than the Simonds cannot be as good. It cannot run as economically, and it will not make the same profit for you in the long run.

More shingles mean more money from the same block of wood.

For shingle saw prices and particulars, address our nearest office, giving size, number of teeth and gauge of saw desired.

We are Specialists on Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only "The Best Protection at the Minimum Cost" in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to Insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our "ADVICE SHEET" system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Toronto, June 15, 1909

No. 12

Injuries to Lumber in Retail Yards

There are many matters of detail to be attended to in connection with a retail lumber yard, so many, in fact, that there is a general tendency to overlook some of them and hope that their neglect will not result in much, if any, loss. It will be agreed, however, by those who have had long experience in the management of retail yards, that unless lumber is looked after continually from the time of its arrival in the yard until its delivery to the customer, it is sure to lose value. Even before the lumber reaches the yards there are sources of loss which ought to be carefully watched. One of these, which causes more deterioration of good dressed lumber than almost any other, is the damage done in transit between the cars on the railroad track and the retail yard. The ordinary method of handling dressed lumber from the cars to the yard is very primitive. Only when it is carefully attended to by the old and experienced employees, who know the injuries which are likely to result, will the lumber run a fair chance of reaching the yard in good condition. In some places it is a regular practice to take extreme care in this matter, but in many places the transportation from the railway to the yard is arranged for in a haphazard manner and in practically all cases, when the busy season arrives inexperienced employees have to be pressed into service. The result is that dressed lumber is injured to such an extent that its grade is lowered materially.

In some quarters additional difficulties are caused by the readiness of railway companies at competing points to undertake the delivery of the lumber from the cars to the yards. When one railway has a siding to the yard and a competing railway wants to get the trade, it contracts to deliver direct to the yard and employs teams, carts and men to do the hauling. This business provides no extra profit for the company and so is done at as little expense as possible, the result being that the cost

to the retailer is increased by the damages to his lumber. The desire of the railway companies to compete with one another is laudable enough and should be encouraged, but the loss to the retailer should make him look about very carefully for some kind of a remedy. The only direction in which remedy seems possible is in the devising of some type of vehicle which will carry the dressed lumber without injury. There are many inventive employees in the retail yards, and it is a wonder that this matter has not been attended to long ago. A genuine necessity is felt and it should not be allowed to go unsatisfied.

The New Freight Line Via Mexico

The completion of arrangements for the establishment of a freight service between eastern and western Canada by means of vessels from St. John and Montreal to Puerto on the Gulf of Mexico, thence via the Tehuantepec National Railway to Salina Cruz and thence by the Canadian Mexican Pacific steamship line to Vancouver and Victoria, is an event which may mean much to the lumber producing industry of western Canada. It will place the markets of eastern and western Canada in much closer communication than they have ever been, and may assist materially in the exchange of products between the people of eastern and western Canada. As to the shipment of lumber, the benefit of such a rate remains to be seen.

From British Columbia to the prairies, or from Ontario to the prairies, it is scarcely to be expected that such a line would make much difference in the freight rates. There are classes of lumber products, however, from British Columbia which already sell extensively in eastern Canada, and it is reasonable to conclude that the freight rates of these will be affected by a line from Vancouver to Montreal which only has one hundred and ninety miles of railway haul. In addition to the direct lowering of freight rates which may be brought about for those classes of lumber which are subjected to the transcontinental haul, there is also a more general advantage to be considered which will be brought about if a line of this nature results in an increased volume of trade between the west and the east. Canadian products from eastern Canada cannot go to the west in increased quantities without a general quickening of trade, which will probably soon make itself felt in the lumber industries. The principal effect, however, of this new departure will be to place the markets of western Canada and those of Europe in closer touch with one another. If the rates are made sufficiently low it is possible that a large trade can be worked up with Europe. It is expected that by the new service, freight will be delivered in Victoria in 35 days from Vancouver.

Exports to United States Increasing

The imports of lumber into the United States from British North America, during April, 1909, amounted in quantity to 36,937 feet, valued at \$666,460. In April, 1908, the quantity was 23,455 feet, valued at \$459,560. For the ten months ending April the figures were as follows: 1909, 672,864 feet, valued at \$12,654,292; 1908, 646,797 feet, valued at \$12,347,646; 1907, 746,197 feet, valued at \$12,571,902. The imports of shingles were as follows: April, 1909, 85,531 M., valued at \$204,910; April 1908, 61,749 M., valued at \$137,630. Ten months ending April, 1909, 878,420 M., valued at \$2,073,993; 1908, 822,417 M., valued at \$1,989,300; 1907, 667,278 M., valued at \$1,439,961. From these figures it will be seen that while the imports from Canada for the ten months were greater for 1909 than for 1908, they are still some distance away from the figures of 1907. For April, however, the increase was a substantial one and gives promise of much greater amounts in the near future. The imports of shingles into the United States have grown steadily, though it was much greater between 1907 and 1908 than between 1908 and 1909. The improvement shown from a Canadian point of view, in the April imports of lumber and shingles, lead to the conviction that when the tariff uncertainty is removed there will be a decided awakening of trade. The exports of domestic timber, hewn and sawed, to British North America were valued as follows: Timber hewn and sawed, 1909, 136,226; April 1908, \$130,655; ten months ending April 1909, \$925,545; 1908, \$890,571; 1907, \$1,013,842. The exports of lumber to British North America were valued as follows: April 1909,

\$310,337; April 1908, \$274,469; ten months ending April 1909, \$2,503,541; 1908, \$3,754,016; 1907, \$3,577,261. The exports of lumber to British North America according to these returns showed a large de-

cline for the 1909 period against a slight increase for the 1908 period, although for the single month of April the exports of lumber to British North America increased substantially.

Quebec Timber Limit Owners Unfairly Attacked

There have been claims made from time to time that the timber limit owners of Quebec do not give the settlers a square deal in the matter of the cutting of timber. One of the commonest of these claims is that owners of limits which will be occupied by settlers, denude the lots of all merchantable timber before they pass into the hands of settlers. A second charge is that the limit holders boycott the settlers by refusing to buy timber from them, and thus put them to substantial trouble and loss.

It should be sufficient, in order to refute these stories, to point to the common sense which limit holders are likely to possess in common with other men. They must naturally realize that there is much advantage to be gained by their lumber camps, in the existence of a few neighboring farms. The advantage of such a source of fresh supplies of good foodstuffs cannot be denied, and a limit holder would be unbalanced mentally if he did not appreciate it. The more serious charge, however, is that the limit holders denude colonization lots of merchantable timber. There will be more inclination on the part of the public to accept such a charge as reasonable, arguing that it is to the interest of the limit holder to get all the timber he can out of his limits. But the charge is not borne out by the facts, according to the Government reports.

The report of the Minister of Lands and Forests for the Province of Quebec gives the following information upon the subject: The Chicoutimi Pulp Company in 1907-08 bought from the owners of lots 402,000 feet of timber more than the cutting on their own limits of 4,452,000 feet; Price Bros., who cut 12,000,000 feet, bought from lot owners 6,000,000; Atkinson, who cut 1,000,000, purchased 10,000,000 from lot owners; the Metis Lumber Company and J. B. Booth & Company bought from these as much as they cut on their whole limits, namely 8,000,000 feet in the one case and 25,000,000 in the other. In the case of the twelve companies whose names are given, the lot owners sold them 89,954,000 feet, or 43 per cent. of their total production. Apparently the lot owners had plenty of timber for sale until 1908. The Min-

ister, continuing in his report, says: "To this it should be added, under the authority of the Customs Department at Ottawa, that in 1908, 720,639 cords of pulp wood were conveyed to the United States to be made into paper; and, according to our data, the lumber from the Crown Lands under license is represented in the above by a quantity of 147,159 cords only. These data are the pertinent answer that may be given to those who make it their mission to repeat everywhere among the public the allegation that when a settler buys a lot that has long been in a limit he cannot find enough timber for his buildings and for his other more pressing needs." Further evidence is afforded in the report of Mr. J. C. Langelier, on merchantable timber cut on lots by settlers and sold by them to the Metis Lumber Company in 1907-08, amounting to 7,741,457 feet, and for which, he says, they must have obtained \$45,000 at the lowest estimate, and in his report on merchantable timber sold by settlers to license-holders in the lower Ottawa region, which amounted to 18,936,873 feet, board measure, 385 cords pulp wood and 5,119 ties. This is not inclusive of the timber sold to owners of small mills and small dealers, which "equals at least the quantities mentioned above," the two together amounting to a sum of \$240,000, putting the value at the low figure of \$6 per 1,000 feet.

This matter, however, has caused much discussion in Quebec and it is believed that all this smoke of criticism means the existence of fire somewhere. One Quebec paper accounts for the charges by saying that it believes the operations of the so-called settlers, or in other words lumber speculators, who have obtained the colonization lots under pretence of intended colonization and have stripped them of their timber and then abandoned them, are to blame. In summing up the situation this paper says: "Apart from the question of colonization lots, it is not to the interest of the limit holders, neither do we believe that it is in accordance with their settled policy to utterly ruin the timber-bearing powers of any of their property, or to cut in such a manner as to diminish the water supply."

The Value of Lumber Trade Associations

The usefulness of an association and the success which awaits one which is inaugurated and conducted upon vigorous business principles are well shown by the career of the Southern Cypress Association of the United States, which recently held its annual meeting at New Orleans. Cypress has been increasing greatly in popularity of late and much of this is due to the work of the association and to the skilful advertising carried on by its members. As an evidence of the spirit which permeates the association, the address of the president, Mr. Frederick Wilbert, of Plaquemine, La., is interesting. Mr. Wilbert said:

"There is no doubt but that an association of lumbermen which could pull through the last year without disaster, must be on a firm footing and must be giving its members that service for which it was organized. The members of our association unquestionably feel this way about our work, else they would have dropped out, and we must therefore congratulate ourselves for being able to do those things which we set out to do in spite of dull business, hard times and the hesitation some of us may feel toward contributing our share of the expenses under such trade conditions. I am informed that during the last fiscal year the association expenditures exceeded the receipts by just \$3. This may or may not be considered conservative, but we certainly have not been rash in spending money we did not have and had no chance of getting.

"This is our fifth annual meeting. In May, four years ago, a number of us gathered together in New Orleans and decided that we should have an association which would work in the interests of cypress. It may be that some of us had no conception of why we should have an association, or what such an association would do if we succeeded in perfecting an organization. I am sure there are no doubts in the minds

of any of us to-day as to whether or not we acted wisely, and I am also sure that, were it possible to draw a complete comparison between now and then with special reference to what the association has done, each one of us would say: 'We have done excellent work and have made good.' The cypress manufacturers were among the last of the lumbermen to appreciate that concerted effort and action are much more effective in accomplishing certain results than the hit-and-miss efforts of the individual. How far apart would be the grades at the different mills if we had not been at work on this particular issue for four years? Would not the grades, as well as prices, have gone to pieces during the last year of business depression? Is it not better to be uniform in all things and let merely prices fluctuate than have fluctuating grades as well? Gentlemen, there is no way for us to draw comparisons between trade conditions as they are and what they would have been had we had no association, or to figure out exactly what we have accomplished by having an association. It is largely a question of belief, and I know all of you believe it has been worth many times over the effort and money expended in association work.

"The cypress lumbermen occupy a position which is probably more unique than that of other lumber manufacturers. There are not many of us. The supply of standing timber is decidedly limited and the rate of growth of our trees is too slow to ever expect a second crop. In addition to this, we do not cut down our trees this week and ship the lumber next week—this is the case with some woods—, but we deaden our timber this year, saw it into lumber next year, and market it during the third year, which is a condition tending more toward conservation than prevails in any other wood manufactured in this country. While cypress will fluctuate in price, the necessarily slow methods we pursue undoubt-

edly have their effect in that we will, as individuals, secure the highest possible price for that stock which it has taken us two years or more to produce, from the time the axe first touches the tree until the dry lumber is shipped. We are an optimistic people, in that we believe next month will be more prosperous than this month and next year more prosperous than this year, and it is, therefore, a natural condition for a manufacturer of any product whatsoever to be conservative in the disposing of his product when it will take him so long to replace it. My argument in saying all of this is to, in a measure, explain why cypress occupies a

stronger market position to-day than probably any other wood. Our prices have gone off, but not so far as other woods, and we are selling almost as much as we are producing. Furthermore, we are producing almost our capacity and there is undoubtedly more cypress being marketed to-day than ever before in the history of the trade. This is a broad assertion, but I believe it to be true, in view of the fact that so many new mills have started up in recent years and so few old ones have closed down. What other wood manufactured in this country can say as much?"

Canada's Foreign Trade has Turned the Corner

In spite of the fact that Canada's foreign trade for the fiscal year ending March 31st, 1909, was less by \$78,744,340 than that of 1908, and by \$52,945,400 than that of 1907, a certain measure of comfort may be taken from the statistics which have just been issued by the Dominion Government, inasmuch as they show that in all probability the turn of the tide has set in and the country's trade is on the increase. For the month of March, 1909, Canada's total foreign trade amounted to \$53,171,277, which was an increase of \$4,546,960 over that of the corresponding month of 1908. The increase in exports for March, 1909, amounted to \$3,811,130, the total being \$33,863,362. The increase in imports for March, 1909, over the same month of 1908 was \$735,830, the total being \$19,307,915. The increase in exports for March, 1909, was therefore 12.6 per cent., and the increase in imports was 3.9 per cent. Accordingly, the increase in exports was three and a quarter times as great as the increase in imports, a condition of affairs which should be regarded as satisfactory by all who wish to see an improvement in Canadian trade conditions.

For the fiscal year ending March 31st, 1909, the exports decreased by \$18,494,447, the total being \$261,512,159. The imports during the year decreased by \$60,249,893, the total being \$298,123,792. The decrease in exports for the year was therefore 7 per cent., and the decrease in imports 20 per cent. These figures demonstrate pretty clearly that during the period of depression Canadian purchasers kept up their sales to foreign markets fairly well to reduce the amount of their purchases abroad. They also demonstrate that as soon as the depression commenced

to pass away Canadian purchasers began to increase their sales abroad. The result is encouraging to Canadian manufacturers and purchasers.

The market conditions in regard to the lumber industry afford a good basis upon which to estimate the general condition prevailing in other lines of business. Lumber is a staple building product which is quick to feel any depressing influence and which returns to normal conditions at a conservative rate. The total value of exports of forest products for the fiscal year ending March 31st, 1909, was \$39,667,387, against \$44,170,470 in 1908, and \$45,823,172 in 1907. There has thus been a decrease of \$4,503,083 during the year just ended, against a decrease of only \$1,652,702 in the previous year. For the month of March, 1909, therefore, the total exports of forest products was valued at \$2,761,307, as compared with \$2,112,607 in March, 1908, being an increase of \$648,700, or 30.7 per cent.

It would be foolish to conclude absolutely that these figures for March, 1909, indicate an immediate return of normal conditions of trade. Those who are engaged in the lumber business are far from satisfied with the present conditions. Their business is uncertain and fluctuating and although most of them are counting upon an early resumption of activity they are continuing the conservative business methods which have been compulsory during the past year. It seems pretty safe, however, to conclude that with the continuance of these conservative methods the lumber industry, and likewise other industries, particularly those which have to do with the production of building materials, will from this time forward gradually return to a satisfactory situation.

Increased Use of Canadian Pulp Wood in United States

According to a report of the United States Forest Service, 251 pulp mills in the United States used 3,346,106 cords of wood, and made 2,118,947 tons of pulp last year. Spruce has always been the leading pulp wood, and it furnished 64 per cent. of the total quantity used. The rapid development of the wood-pulp industry in the last ten years has rendered the domestic supply of spruce insufficient to meet the demands upon it, and consequently importations from Canada were heavy. In 1908 United States pulp mills consumed nearly one and one-half million cords of domestic spruce, and over 670,000 cords of imported spruce, making the imports of spruce 45 per cent. of the domestic supply.

Next to spruce, the most important pulp wood is hemlock, 569,173 cords of it were converted into pulp last year. All the hemlock used was of domestic origin, and most of it was produced in the Lake States and Pennsylvania. Although now used in less quantity than spruce and hemlock, poplar has long been a standard pulp wood. A small quantity of poplar is imported, but by far the larger portion of the more than 300,000 cords used last year was cut from domestic timber. Spruce, hemlock, and poplar made up 90 per cent. of the total quantity of pulp wood used.

The wood used by the pulp mills last year cost them a little more than \$28,000,000, or an average of \$8.38 per cord, against an average of \$8.21 in 1907. The most costly wood used was imported spruce, with an average value of \$10.60 per cord. The average for domestic spruce was \$8.76 per cord, and for poplar, \$8.04 per cord. The cheapest wood which was used in large quantity was hemlock, the cost being \$6.02 per cord. Owing to the uncertain business conditions the total consumption of pulp wood in 1908 was nearly 16 per cent. less than in 1907, but this did not prevent a considerable increase in the price of wood. The high price of wood is placing the manufacturers constantly on the lookout for cheap-

er raw material, and one of the most encouraging developments has been the increased use of slab wood and other sawmill waste. This drift in the industry is clearly indicated by the fact that 193,234 cords of mill waste were reported as consumed in pulp manufacture during 1907, while 252,896 cords, an increase of 30 per cent., were used in 1908.

These statements are based upon a preliminary report of the consumption of pulp wood in the United States in 1908 just issued by the Bureau of the Census. The Bureau of the Census and the Forest Service co-operate in the collection of annual statistics of forest products, and this preliminary report will soon be followed by a bulletin, which will give detailed information upon the use of pulp wood last year in the various States, the cost per cord, the amount reduced by the mechanical, sulphite, and soda processes, and other facts of interest to the industry.

To Canadians the significant portion of this report is the growing importance of the Canadian supply of pulp wood to United States manufacturers. This is amply proved by the large amount of spruce which is imported by United States manufacturers, and by the fact that this spruce commands a higher price than any other wood which is used by them. For Canadian spruce the United States manufacturers, according to this report, are paying \$1.84 more than for the domestic spruce. The time is not far off when the majority of spruce used for pulp manufacture in the United States will have to be obtained in Canada. Even to-day, the large amount which goes into the United States should make Canadian purchasers and Canadian producers anxious about the drain upon Canadian spruce resources which is certain to result, if the export is allowed to continue unrestricted. The decision of the Quebec Government to prohibit the export of pulpwood from Crown lands will go a long way towards preventing this drain. It should be enforced quickly and effectively.

Lumber Trade Statistics for Fiscal Year

Figures for March 1909 and for the Twelve Months Previous—Exports
of Wood Goods and Imports of Dutiable and Free Forest Products

Details of the exports of forest products for the month of March, 1909, and for the fiscal year ending March 31st, 1909, were as follows:

Article	March, 1909. Quantity.	Value.	Year ending March 31. Quantity.	Value.
Ashes, pot and pearl	77	\$ 3,449	807	\$ 33,897
Ashes, Leached			55	
Ashes, all other		13,596	58,299	
Bark for tanning	238	6,757	19,659	122,118

Details of the imports of dutiable woods during the month of March, 1909, and the fiscal year ending March 31st, 1909, were as follows:

Article	March, 1909. Quantity.	Value.	Year ending March 31. Quantity.	Value.
Sawed boards, planks and deals ... M ft.	412	\$6,028	6,943	\$104,856
Lumber and timber manufact'd ... M ft.			115	2,154
Veneers of oak, rosewood, mahogany, Spanish cedar and walnut		23,419		130,817
Veneers of wood, n.o.p.		5,171		28,736
Wood pulp		5,983		34,647

Canadian Exports of Pulpwood.

During the fiscal year (ended March 31, 1909) the quantity of pulp exported from Canada was: To the United States, wood pulp, chemically prepared, 769,514 cwt., and mechanically ground, 3,033,885 cwt.; to Great Britain, chemically ground, 13,660 cwt., and mechanically ground, 973,598 cwt. The export of paper during the same period was: To the United States, wall paper, rolls, 19,974, valued at \$6,440; felt paper rolls, 109,863, valued at \$101,835; wrapping paper, 594,095 pounds, valued at \$24,264; printing paper, valued at \$791,533; paper of other kinds valued at \$34,673. To Great Britain, wall paper, 512 rolls, valued at \$159; felt paper, 5,060 rolls, valued at \$21,896; printing paper to a value of \$922,278, and other paper to a value of \$354,887. During the same period 901,861 cords of pulp wood were exported to the United States.

In the matter of export, the sales of wood for wood pulp to the United States have increased. In the last nine months of 1908 the value was a little over \$3,500,000, compared with a shade above \$2,000,000 for the corresponding term of 1906. No other country was a purchaser from Canada. In wood pulp the sales in the last nine months of 1908 were \$2,000,000, the same as in 1908, and \$750,000 less than in 1907.

Imports for February and Previous Eleven Months.

Imports of wood and its manufactures into Canada during February and the eleven months ending with February, were as follows:

	February.		Eleven months ending February		
	1908	1909	1907	1908	1909
Great Britain ...	\$ 9,865	\$ 11,591	\$ 137,318	\$ 191,053	\$ 151,991
United States ...	581,627	562,004	8,824,646	11,860,510	7,250,501
Other countries ..	23,228	16,983	276,675	252,990	278,873
Totals	\$614,720	\$590,578	\$9,238,639	\$12,304,553	\$7,681,365

Exports of wood and its manufactures from Canada during February and the eleven months ending with February were as follows:

	February.		Eleven months ending February		
	1908	1909	1907	1908	1909
Great Britain ...	\$ 410,467	\$ 368,326	\$16,916,610	\$12,688,197	\$10,710,413
United States ...	1,032,371	1,490,008	27,304,554	29,414,351	27,424,374
Other countries..	293,724	243,183	4,215,969	4,878,853	3,504,704
Totals	\$1,736,762	\$2,101,517	\$48,437,133	\$46,981,401	\$41,639,491

United States Wood Exports.

United States exports of domestic wood and its manufactures for March, 1909, amounted in value to \$6,547,951, against \$7,107,312 in March, 1908. The exports for nine months ending March, were as follows: 1909, \$48,548,818; 1908, \$61,658,569; 1907, \$59,247,903. The exports of foreign wood and its manufactures were as follows: March, 1909, \$160,764; March, 1908, \$112,358; nine months ending March, 1909, \$946,906; 1908, \$922,844. The imports amounted in value as follows: March, 1909, \$2,326,417; 1908, \$1,544,226; nine months ending March, 1909, \$24,708,483; 1908, \$26,649,490; 1907, \$24,648,952. The imports of lumber from British North America were as follows: March, 1909, \$609,409; 1908, \$325,150; nine months ending March, 1909, \$11,987,832; 1908, \$11,888,086; 1907, \$11,756,227. The exports of lumber to British North America were as follows: March, 1909, \$311,284; 1908, \$254,209; nine months ending March, 1909, \$2,193,204; 1908, \$3,479,547; 1907, \$3,021,603.

President Taft has stated that he believes the tariff bill will be ready for his signature on June 20th. Senator Aldrich sets the date as July 1.

Quebec to Stop Export of Pulpwood

Premier Gouin makes Important Announcement regarding Change in Government Policy

An important announcement was made by Sir Lomer Gouin, Premier of Quebec, at the banquet which was tendered him on June 2nd by the Reform Club, of Montreal. The Premier took advantage of the occasion to declare that his Government had decided upon a new policy in connection with the administration of Crown lands by means of which the export of pulpwood from Crown lands in Quebec would be prohibited. The announcement was received with much approval by those present, and has been the cause of much commendation in the press since it was made. The new policy will bring Quebec in line with Ontario in regard to the export of pulpwood, and will probably be the cause of extensive developments in regard to the manufacture of paper and other pulpwood products in the province. It will mean, above all things, that the drain upon Quebec pulpwood for the purpose of supplying United States mills with raw material, will be stopped, with the consequent result that American mill owners in order to supply the demand for paper in the United States will have to come over to Canada and establish plants near the sources of supply.

Sir Lomer Gouin's remarks in connection with the subject were brief. He said: "The Department of Lands is the most important of the province. Considerable criticism has been directed against it. It is said that reforms must be made there. We admit it. Reforms must be made to-morrow, next year and each year which follows, and I am in a position to declare, that it is the intention of the Government to see to it that this department is as well administered as any other."

"But there is something more important still. You know that from this department the Government draws the greater part of its revenue. Fifteen years ago it gave \$500,000 a year; to-day the revenue varies from one and a quarter to one and a half millions of dollars. This revenue consists of a tax on the cutting of wood on lands belonging to the Crown. Ten years ago we had made an arrangement with the license holders according to which we retained the cutting rights for wood in these limits. At the end of the year the arrangement will cease to be effective. And I believe that it is important from to-day to warn limit holders and all others interested that when the term of this agreement expires the stumpage dues will be very considerably increased. We will then receive from the licensees what will practically amount to a land rental."

"But there is, I believe, something more important yet. We have heard of the exportation of our wood into the United States; we have heard of the Congress at Washington. I am happy to see at this table one of the Canadian representatives to this conference and to congratulate him on the results he and his colleagues achieved at this conference. President Roosevelt, understanding the importance of our rich forest wealth, demanded that the representatives of all North America should unite for the conservation of our forests. You know what has been said in regard to the new tariff on the importation and the exportation of wood pulp. I believe, I may be mistaken perhaps, that the public opinion of our province is well aroused in regard to the shipping of our wood to the United States, a country with whom we wish to keep on most amicable terms. Our powerful neighbors have need of our pulp wood as an essential to their paper making industry."

"So far we have allowed this importation of our pulp wood. Undoubtedly we cannot hinder private individuals from exporting pulp wood from their own land, but what we can do, and what I think we ought to do, is to prevent the exportation of pulp wood from lands belonging to the Crown. I should say that my colleagues and myself think that the time has come when the province should take this step, as was done several years ago in Ontario. Perhaps some interests will suffer from it, but we think that the great majority of the people will profit, and when we impose this tariff we will insert a clause saying that no wood from the Crown lands will be allowed to leave the province before it has been manufactured."

A Log Too Large for Any Mill.

A log so large that none of the many mills in the Northwest was capable of sawing it, with the result that the largest whip-saw ever manufactured had to be made to order and the work done by hand, will be one of the State of Washington's exhibits in the forestry building at the Alaska-Yukon-Pacific Exposition at Seattle. No bit of timber like it was ever before seen at a World's Fair, and such a giant is not likely to again be dragged from its forest home to excite the wonder of the curious and studious who assemble at an exposition exhibit.

The log, which is illustrated herewith, measures 10 feet 6 inches through the butt, and is of Douglas fir. The towering tree, of which it is only a section, was logged by the English Logging Company in Skagit County's land of big timber, and forwarded to Seattle with great difficulty, despite the presence of every facility. It was logged over a private road to Milltown, and then towed by two tugs to Ballard.

An effort was then made to have the log sawed, and large mills at Ballard, Everett and Bellingham, cities boasting of their twentieth-century milling, were appealed to, only to bring the answer that no known machinery was capable of cutting so large a tree. A Seattle saw works was then consulted, and its manager declared that the only possible way of handling the log would be to construct a whipsaw especially for it, and set men to the work of cutting by hand. As a result, a saw 15 feet

A Mammoth Log—Showing How It was Sawn.

in length, 17 feet over all, including the handles; 12 inches across the base and tapered uniformly throughout its length to 10 inches at the lower tip; and with the steel blade 12 ga. in thickness, was manufactured.

No log one-half the dimensions of this big tree has even been sawed by hand before. It took nearly two days to make a single cut the length

A Mammoth Log—Too Large for the Mills.

of the log, and as five cuts were necessary, ten days had to be given up to the actual sawing necessary to cut the log into the four sections desired.

The Wood-McNab Lumber Company are closing out their retail lumber yard at Fernie, B.C.

THE BRITISH COLUMBIA TRADE

Shingles Still in Good Demand.

Vancouver, B.C., June 8.—The lumber and shingle markets have shown little change during the last fortnight. Shingles and the higher grades of lumber are in good demand but rough lumber is not bringing enough to allow of a profit. The local trade is unusually brisk. The basic price of lumber is \$11. Logs have experienced a slump of \$2 to \$2.50, good grades being obtainable now at \$8. This is the result of the spring supply of logs having reached the market. The good demand from the mills, however, shows no diminution.

A Vancouver operator who has returned from a trip to Puget Sound has declared to the press here that he gleaned from his visit that the Puget Sound mill men believe that there will be a duty of fifty cents a thousand on shingles and of \$1 a thousand on lumber entering the United States. This informant says that operators are agreed that when the smoke of battle clears away this will be found to be the result. This means an advance of twenty cents a thousand on shingles and a decrease of \$1 on lumber.

New Westminster Mills are Active.

New Westminster, with a population of 12,000 progressive people, can boast of a number of live industries, including the Fraser River Mills, perhaps the largest and most perfectly equipped plant for the production of lumber to be found in British Columbia, and the equal of any in the State of Washington.

Messrs. Small & Bucklin conduct a large saw and shingle mill and planing factory, giving employment to a large number of men. The firm do a large local trade, having been in operation a number of years.

The Westminster Iron Works report business to be brisk. The firm is one of the pioneers in their line in this district.

The plant of the Royal City Planing Mills, a branch of the British Columbia Mills Timber & Trading Company, of Vancouver, is the most extensive within the city limits. It has a large output of sash and doors, mouldings, boxes, etc. There is a well-equipped sawmill and shingle mill in connection. The machinery throughout is of the most modern type, and there is a steady demand for the output because of the high quality. Manager R. J. Richman is in charge, and the staff under him numbers about 230 men.

The Walsh Sash & Door Company report so many orders pouring in that with a nominal capacity of 300 doors in ten hours they have been compelled to start a night shift in order to increase the output to 500 doors in twenty hours. They are now putting in a new power door clamp capable of handling 1,200 doors per day.

The Independent Shingle Company, operated by Messrs. Roe & Abernathy, are another centre of activity, where the output is large and the product uniformly good. They find it impossible to keep up with the demand. Vancouver contractors use their shingles extensively. The proprietors are about to start another mill so as to supply the demand better.

The British Columbia Manufacturing Company handle boxes for the canneries, and a line of veneers. Business has been dull in this line, but as the canneries are now starting up Manager Brenner expects a revival in the near future.

Manager Duncan, of the Vulcan Boiler Works, reported that business was fairly brisk.

The Barnett & McDonald sawmill and shingle mill is another of the large industries of New Westminster. The shingle mill was erected last season, cutting being commenced about June 1st with six machines. The daily output has averaged about 170,000 every ten hours, and being cut from specially selected bolts the grade runs high, which accounts for the steady demand for the output. The firm think of adding two more machines. The large sawmill and a box factory in connection are now approaching completion, and will commence cutting about June 15th. The sawmill will have a Garland band equipment and will turn out about 50,000 feet in ten hours. The box factory will use up all common ends.

The Schaake Machine Works, on Front street, have experienced a rapid growth, the main cause of which is that they turn out a good machine—the Johnson shingle machine, of which hundreds have been sold. In addition they cater to almost every branch of iron and steel work, and the patronage has grown to such proportions that Mr. Schaake finds it necessary to more than double the floor space of the foundry building. The addition will be 24 feet in height, with a gallery running round, and a travelling crane for the transfer of heavy pieces of metal. A new cupola blast furnace will be installed in the new building, which will greatly facilitate the casting operations, and enable heavier pieces to be turned out than formerly.

Another important and up-to-date mill is that of the Brunette Lumber Company, at Sapperton.

Messrs. McNair & Skeene, of Vancouver, have become the owners of 33 sections of first-class timber in the vicinity of Alberni canal, Sproat lake, and Great Central lake, Vancouver Island. The purchase price was in the neighborhood of \$70,000.

Michigan Lumbermen Visiting the Coast.

Eighteen Michigan lumbermen passed through Vancouver recently en route to inspect the limits lately purchased by them near the Jordan river. The party comprised the directorate of the company, and was headed by Charles W. Liken, of Sebawaing, Mich., its president. The limits were purchased some months ago and are said to be the richest on Vancouver Island. The company's holdings comprise 31,000 acres of heavily timbered land, in a rectangular area of about fifty square miles. They already have mills at work and are marketing about 200,000 feet of logs a day, but it is proposed to increase this output.

Included in the party is H. A. Gilmartin, of the Detroit "Free Press," who is representing that paper upon the trip. "Michigan was a pioneer in the manufacture of white pine," he remarked, "and the industry has been a flourishing one in our State. But the areas are now exhausted and our lumbermen are compelled to seek fresh fields. Practically the only pine left is that on the Ward estate, where from sentimental reasons a tract of 17,000 acres was conserved. This is being cut down now and manufactured as fast as possible." The party will return to Seattle for the opening of the Alaska-Yukon Pacific Exposition. The area purchased by the syndicate brought a price of over a million dollars.

A Seattle report dealing with the visit of this party says: "These men are almost without exception millionaires, and are interested in 2,500,000,000 feet of timber holdings on the mainland and Vancouver Island. They are preparing to work up their British Columbia timber in the near future, and throw it onto the American market as the result of the almost certain compromise on the lumber tariff schedule. It was, in fact, the favorable prospect that Congress would cut the lumber schedule on the common grades down to \$1 that persuaded them to go west. They realized that they would have considerable time to size up the situation from the fact that the tariff agitation was still pending and the log market 'shot to pieces,' and only a small percentage of the mills operating on more than half shift.

"It was admitted by several members of the party that the probable reduction of one dollar in the import duty on lumber would result in an immediately increased activity in their operation on British Columbia soil when the modified schedule had become effective. This syndicate is already supplying to the British Columbia mills a cut of about 200,000 feet daily—an amount that present market conditions do not justify—which means that the yards are rapidly becoming overstocked, and for no other purpose than to dump the surplus across the boundary into the United States as soon as the tariff gates are lowered. This presents a peculiar situation. They are a group of American capitalists and timber operators, who would, from the standpoint of their holdings on the American side, desire a high protective tariff to keep the market price up, but who from the standpoint of their heavy operations in British Columbia desire to have the duty eliminated or reduced. It would look as if they were robbing Peter to pay Paul, but what they propose to do is to denude their Canadian holdings while the tariff is low, and hang onto what they have in the States until the destruction of the forest resources has forced the market sky-high and then they will begin to cut their timber in the States."

Activity among Ocean Freighters.

The British barque Hawthornbank arrived in port recently and will load lumber at Hastings' mill.

The steamer Clan McInnes started loading lumber at the Fraser River Mills the first week in June.

The barque Adderley has completed loading 1,106,000 feet of lumber at Hastings (B.C.) mills for Sydney, Australia.

The Chilean barque Curzon, 17,078 tons net, and the Chilean barque Royal Sovereign, have left Iquique, South America, privately chartered to load lumber at Hastings mill.

The Australian mail line steamer Invermay, having completed her cargo of 2,000,000 feet of lumber at the Fraser River Mills, Fraser Mills, B.C., left for Sydney, New South Wales, on the 1st of June.

A new line of sailing vessels between Vancouver and Great Britain has just been inaugurated with the sailing from Liverpool for Vancouver of the ship Wray Castle. The principals in the new enterprise are C. Gardiner-Johnson & Company, of Vancouver, and R. Ward & Company, of Victoria. At the outset the new fleet will comprise two vessels, the Wray Castle, 1,791 tons net, Captain Hunter, and the French barque Max, 1,726 tons, Captain Garnier. The latter vessel left Europe for Vancouver about the middle of May, and will reach port within the next six months.

Many Important Deals are Reported

Nine Thousand Acres Sold to Pittsburg Buyer —Hartley Bay Interest Changing Hands

The latest important deal in timber has been carried through by Mr. George Martin, the McLaughlin Lumber Company, D. J. O'Brien and the Gulf Lumber Company, of Vancouver, who sold to Charles F. Heidrick, of Pittsburg, Pa., for the price of \$110,000 cash, 9,000 acres of British Columbia timber land, estimated to contain upwards of 300,000,000 feet of merchantable saw timber, principally cedar and Douglas fir. One tract of 2,000 acres lies along the Fraser river, about 75 miles east of Vancouver, close to the C.P.R. tracks, and another tract of 7,000 acres is on North Valdez Island, in the coast district, and lies within one mile of the salt water. Mr. Heidrick, who is president of the Pittsburg, Somerville & Clarion Railway, spent six weeks going over the limits with his timber cruisers, and in the course of a brief interview at the Hotel Vancouver with the "Canada Lumberman" representative, expressed his satisfaction with the purchase and his intention to acquire other properties on the occasion of his next visit in the fall. He is already largely interested in sawmill propositions in Pennsylvania and West Virginia, and stated that it was his intention to erect a large sawmill on one of his newly acquired British Columbia properties in the near future.

The details were practically completed in Victoria recently whereby the interests of the Hartley Bay Lumbering & Manufacturing Company pass into the hands of a syndicate of capitalists at the head of which is Mr. Andrew Anderson, of Victoria.

The Hartley Bay first sprang into prominence as a point worthy of consideration along the northwest coast through the efforts of Capt. McCoskey, formerly of the Canadian Pacific Navigation Company. The captain, owing to the knowledge gained from many trips north while on ordinary duty, had an opportunity of spying out the land, and took full advantage of it. Hartley Bay is on the main coast line, just south of Kitamaat.

The Hartley Bay Lumbering Company, which Capt. McCoskey founded, has concessions from the Government which embrace timber and fisheries—and, with the development which is taking place in the new north, these are now of the most valuable character. Already a large sawmill is in operation, and with the upbuilding of Prince Rupert there is a good demand for the product of the mills. This enterprise will be very largely extended by the new owners, who point out that owing to the strong currents in Seymour Narrows, the mills situated on the lower coast are debarred from competing in the lumber business at Prince Rupert and other northern points.

A deal involving \$250,000 has been put through by which C. D. McRae, of Calgary, a well known timber owner, transferred his 63 timber limits up the North Thompson river to a syndicate from Toronto. The limits, which cover 40,320 acres, are situated from 100 to 165 miles up the river and represent over two billion feet of merchantable timber. Cruisers are now going through the limits and will soon complete their investigations. The Canadian Northern Railway made a strong bid for this property, but their price was lower than that offered by the eastern capitalists. Mr. McRae considers this as evidence that the C.N.R. will come down the North Thompson valley and he states also that while on the coast, where he has spent the last three months, he was led to conclude that the Canadian Northern would rush its line through the Yellowhead Pass as expeditiously as possible.

Mr. McRae is one of the best known timber owners of the province and his close contact with moneyed interests places him in a position to know just how things are going. He says that it is a difficult task to get moneyed men away from the coast at the present time, but he feels confident that they will invest in other localities as well before very long.

The Victoria "Colonist" says that some of those buying timber on Vancouver Island think the people in Victoria do not appreciate what their forest wealth means to them, but it is a certainty that purchasers from the United States do appreciate the situation, and are backing up their convictions with their money. One large syndicate proposes to establish mills on Jordan river to operate their limits, and the "Colonist" tells its readers that Jordan river is only 30 miles from Victoria as the crow flies, and if large sawmills are erected there the construction of a railway will follow as a matter of course. The news that mills are to be erected on Jordan river means much to Victoria, and it will probably mark the beginning of an era of extensive development in the southern part of the island.

Records in cutting lumber are claimed by the Panhandle Lumber Company at Spirit Lake, Idaho, and the Ross-Saskatoon Lumber Company, at Waldo, B.C. The former also believes it has set a new mark by loading 283,000 feet of logs on cars in eight hours and 40 minutes, using a single crew, working with one jammer. R. F. Blackwell personally supervised the work. The best previous performance is placed at 235,000 feet in one day. The Panhandle mill at Spirit Lake reports a

total cut of 235,840 feet in 10 hours with two double-cutting band saws. Four hundred and ninety-four logs were passed through the mill. One of the saws was out of the run for 28 minutes by a log turning in it and bending the guides, else the total cut might have been 241,840 feet. The Ross-Saskatoon mill cut 72,000 feet of one and two-inch mill run lumber in 10 hours in a double-cutting band mill, without re-saw or gang. The crew claims this is a record for a similarly rigged mill. The lumber was cut from pine, larch and fir logs.

Personal Mention.

Mr. D. W. Clark, of Toronto, representative of several English manufacturing companies, spent a few days in Vancouver lately, and gave the "Canada Lumberman" a call.

F. D. Hillis, timber agent, Victoria, has completed a deal by which 76 sections of timber on Moresby Island, B.C., have been sold to New York and Iowa capitalists. The sum involved was \$1,040,000. The first payment of \$40,000 has been made.

Mr. H. G. Barnet, of the lumber firm of Barnet & McDonald, New Westminster, who spent the past three months in California for the benefit of his health, is now visiting his old home in Renfrew, Ont. The "Canada Lumberman" is pleased to learn that Mr. Barnet's health has been completely restored by the long rest.

Mr. Charles Henry, managing director of Joseph Peace & Company, Limited, the famous saw manufacturers of Sheffield, Eng., who is making a tour of the firm's Canadian agencies, spent ten days lately in Vancouver and vicinity, being shown about by the firm's local representative, Mr. A. S. Brake, 510 Homer street.

Mr. Cyril McAlpine, of Winnipeg, barrister, spent a week in Vancouver lately, and, following the lead of most visitors, was tempted by the exceptional chances offering for investment. He disposed of 60 acres near Kamloops, B.C., bought by him five weeks ago, at a profit of \$4,000, and acquired 260 acres near Otter lake, in the Okanagan district, at a snap price.

Mr. Fremont Crandell, timber buyer for the Grand Trunk Pacific Railroad Company, was in Vancouver recently from Prince Rupert, and paid the "Canada Lumberman" a visit. Mr. Crandell, as evidence of the enterprise and facilities existing up the coast, stated that in less than one month he had contracted for the full quantity of ties required for the mountain section, delivery of which commenced on June 1st.

Mr. H. L. Jenkins, president of the Vancouver Timber & Trading Company, has returned from Minneapolis and Chicago. Mr. Jenkins spent three weeks in the East, where he found money plentiful but business unsettled. The Prairie States are holding off on purchase of lumber, anticipating lower prices. They claim that there is an overproduction and stocks are piling up. Mr. Jenkins thinks the lumber tariff will be reduced to \$1.50—a reduction so small as to have little effect upon the importation of Canadian lumber. In his opinion many Canadian papers unwittingly helped to make free Canadian lumber impossible, by advocating an export duty on Canadian lumber if the United States should remove the duty. The United States market, Mr. Jenkins thought, was badly wanted, and Canadian journals had acted unwisely in the matter.

The Western Canada Wood Pulp & Paper Company have engaged Mr. J. B. Beveridge, the former mill manager of the Canada Paper Mills of Windsor, Quebec, to take the exclusive management of the company, which is now erecting its plant at Quatsino Sound, B.C. In Mr. Beveridge the company have secured a man of the highest qualifications for the position. Prior to his connection with the Canada Paper Mills, Mr. Beveridge served in the capacity of mill manager of the Miramichi Pulp & Paper Company, of New Brunswick, and was formerly connected in a similar capacity with the Kellner-Partington mills of England. He is considered an expert in the manufacture of book, news and wrapping paper, as well as in the manufacture of mechanical and sulphite pulp. The Canada Paper Mills, of which Mr. Beveridge was mill manager, is one of the oldest and most successful mills of Canada. They were formerly manufacturers exclusively of book, fibre and high grade writing stock, but recently established the St. Francis mills for the manufacture of news, in which they are now operating what is claimed to be the largest paper machine in Canada, with a capacity of 40 tons of news print per day.

Seattle millmen report that the market for spruce lumber has picked up materially in the last 30 days. There has been no change in the price of this lumber since the advance on March 1st, but the demand is keeping quotations firm. The majority of the mills of Oregon and Washington continue to operate on an average of about 48 hours a week. Some millmen advocate a further curtailment.

Mr. Henry DePencier, one of the best known lumbermen in British Columbia, died on the 30th of May. He was 60 years of age, and had been in Vancouver over 20 years. He was better known as the manager of the North Pacific Mill at Barnet. He leaves a wife and several sons. The funeral was conducted by the Free Masons of Vancouver, B.C.

THE WOODWORKER

A Sprinkler System for Woodworking Shops.

Experience, that expensive though most successful teacher, has demonstrated that half the fires in woodworking shops start in the boiler room, the shavings vault or the dry room; also that steam is the best means of extinguishing fires in such small and confined places. However, as fire employees often forget the steam jet until the next day, automatic sprinklers have been demonstrated to be the most effective means of putting out fires. These facts have led to experiments with automatic steam sprinklers and their very successful use in a large number of cases show that they are not only entirely feasible, but the best possible aid in extinguishing fire. Steam has proven its value in boiler houses, shaving vaults and dry kilns and is the only means of conquering fire in the dry room with small loss, due to piling lumber therein stripped.

Automatic sprinkler heads should be placed upright under the ceiling (on a pipe) about eight feet apart and about four feet from wall or partitions. This pipe drains back to the supply and has a valve on each supply fastened open, except in case of repairs. These sprinkler heads cost about 75 cents each, and any approved sprinkler head will do. Many mills doubtless have piping that can be used and an engineer capable of doing the work, so that the cost of installing this system will be small. The higher the temperature of the room the higher should be the degree of the head.

The accompanying cut showing an automatic steam and water sprinkler is in successful operation in a mill which had it installed by a

local plumber at a total cost of \$70. It affords protection to the three rooms of the mill in which fires are most likely to occur. This same general plan might be applied to any mill; if there is no city water, connection can be made with the boiler pump. The system is first filled with water and the steam valve then opened. The check valves keep the water from backing into the boiler.

The other cut shown in connection with this article illustrates a steam cleaner which has been tried in numerous factories and proven a most effective means of keeping woodworking mills scrupulously clean at a very low cost. If used weekly it will be found most effective in keeping the plant in good condition.

Of this steam cleaner a large woodworking concern, which has used the apparatus for eighteen months, says:

"We clean walls, ceilings, bearings, pulleys, machines, etc., with this cleaner. It does not interfere with our sprinkler system. The cost to equip is a very small item, and cost of using practically nothing. We have used it for about eighteen months, and find it very satisfactory with no disadvantages. We blow when shut down. We also have it in our boiler room, for cleaning ceilings, pipes, etc." These suggestions are given by a lumber insurance company, and should be carefully considered by mill owners.

Some Fine Wood Working.

Those who live along the Canadian Pacific Railway and who are familiar with the natural wood finish of its passenger cars, cannot fail to appreciate their beauty, says Chas. L. Presnell, in "The Wood-Worker." However, it is beauty that is not without its price, for natural wood finish is a great deal more expensive than painted cars would be.

In the first place, the wood is more expensive. The baggage cars are sheathed with British Columbia fir, the older first-class coaches with cherry, but all dining, parlor cars and first-class coaches now built are sheathed with mahogany. It is necessary that it be sanded and cleaned up to a perfect surface before the finish is applied, and the wood used must be sound, perfect stock, free from all imperfections, as all blemishes would show through this finish, whereas they could be covered by a painted surface.

This first cost is only a part of the extra cost, for it is quite a costly

proposition to keep them up to the required standard of excellence when in use. They must be frequently and carefully cleaned in order to keep them free from cinders and coal dust, and every scratch shows up very plainly.

Frequently, while in motion, they will be "side-swiped" by another car, or some other object, producing a long scar, and to restore this the car must go to the shop and have the finish scraped off for some distance on each side of the scar, and the whole process of finishing gone through with, which requires a good many days, keeping the car in the shop and out of service for a long time, and requiring a lot of shop room to accommodate them. The time required, and the cost of this work, is a great deal more than would be the case in painted cars, which, in case of scratches, can be touched up in a short time. The cost of this refinishing of scratches, according to the shop figures, is \$1.50 per square foot of surface, where the wood is not injured, and where the wood has to be replaced it is, of course, much more.

The interior of these cars is superb, being the product of the best cabinet-makers' skill. For this purpose the most expensive woods are used, among them being a wood called padouk, which is obtained from the Andaman islands, India, which costs 31 cents per square foot. It is deep red in color, more rich-looking than mahogany, very hard, and has streaks somewhat resembling the annular rings in our pine, only larger. The grain in these streaks runs opposite ways, so no matter which way it is planed, part of it will be against the grain, making it very hard to get a good surface and requiring a lot of work after planing to bring it down. The sap is very thin as compared to the heart or body of the log, and is white in color and is not used.

Through the courtesy of Mr. C. F. Ryding, superintendent in charge, the writer had the pleasure of a visit through the shops of this company at Montreal, Can., some time ago, where they have a most elaborate and finely equipped plant for turning out rolling stock, from hand cars to locomotives and palace cars. There is a most complete machine room for getting out all kinds of wood work for passenger and freight cars, both frames and bodies, and a second machine room for getting out the fine cabinet work only. All machines are electrically driven.

It would require too much space to describe all the good features in evidence there, but the plant is arranged in the best possible manner for handling the material and cars to the best possible advantage from start to finish. The whole is magnificently planned and executed to eliminate all unnecessary labor, and the progressive management, which is always ready to investigate labor-saving devices and tools, has resulted in the plant being finely equipped.

This company requires a high standard of service to be maintained in all branches of its service, and has surrounded itself with the best grade of employees possible to secure.

Cooperage Trade is Quite.

The Wallaceburg Cooperage Company, Limited, Wallaceburg, Ont., report that trade in the cooperage line, at the present time, is a little quiet, as is usual at this season of the year, as it is just the time, as it were, between seasons. The old wheat is about ground up and the flour mills are doing very little until the new wheat comes in. There is, however, quite a fair demand for apple barrel stock and present indications point to a good apple crop this fall. This being the case, there will be a good demand for this grade of stock and as the mills throughout the country did not carry over any large quantity of cooperage, and the winter also was very unfavorable for lumbering, unless something unforeseen should occur to lessen the demand, they look for prices to advance materially between now and the fall.

Timber suitable for cooperage is becoming each year more scarce and higher in price and the cost of getting it to the mills is also increased by reason of there being no large quantity in one block as was formerly the case. Most of the mills, especially where they are located on the rivers and on the railway, are compelled to pick up small bunches of timber at different points and bring them to the mill by rail or rafts. Looking after the picking up of these small lots, materially increases the cost.

Expert men for turning out staves, hoops and heading are also becoming scarcer and higher wages have to be paid now to secure good men than was the case some years ago. This has naturally had the effect of making cooperage high in price, and where there is an extra strong demand occasioned by a good fruit crop or an active demand for flour in barrels, prices of necessity advance. At the present time, owing to dull trade, cooperage stock is lower than it has been during the last year or two. The prospects, however, are very bright for the coming season and unless the present indications fail, there will be a brisk demand and higher prices for cooperage stock, especially if the quality is right, a little later. Prices must advance, as there is absolutely no margin in the business at present prices owing to the increased cost of timber.

A Problem for the Sticker Man.

A correspondent of the "Wood-Worker" submits the following interesting questions, which will provide useful subject for study:

Fig. 1 represents cross-sections of two mouldings whose faces are turned together and exactly fit each other. Fig. 2 is same, but different pattern of moulding. Fig. 3 represents two moulding cutters, with their cutting edges together (faces up) and exactly fitting each other. Fig. 4 is same, but different pattern of cutters.

Now let us just suppose that cutter No. 1 will cut moulding No. 1. Question, will cutter No. 2 cut moulding No. 2? And supposing that

Fig 1

Fig 2

Fig 3

Fig 4

cutter No. 3 will cut moulding No. 3, will cutter No. 4 cut moulding No. 4?

I would suggest that a novice should not answer too quickly, but that some good sticker man, who has the ability to explain queer things, set it forth clearly.

The Position for Cylinders of Double Surfacers.

The best positions for the cylinders of double surfacers is a matter which has given rise to much discussion. A writer in "The Wood-Worker" deals with the matter as follows:

In order to get the best kind of planing from any machine, all will agree that the more solid or rigid the planer bed or table, the better the planing. While the lumber is being planed it should be free from any vibration caused by a yielding bed or platen. The cylinder should not be cutting a board that rests on a yielding foundation, as the resulting surface is bound to show the effects of this yielding bed.

I give herewith a sketch of the cross-section of the cylinders and rolls of a double surfacer in which the upper cylinder cuts first. I have operated one of these machines for some time and have never seen any

work from the other style of planer that could beat the work turned out by this machine. The upper infeed roll C is weighted so that it will accommodate itself to the depth of the cut of upper cylinder A. This roll acts in conjunction with front and back pressure-bars P and R to hold the board down upon the solid bar or platen L, that is bolted to the upper wedges or inclines of the machine. There can be no vibration in this kind of a table, and the rolls and pressure-bars exert enough downward pressure to prevent any vibration that might be caused by the lifting action of the knives.

The solid platen or bridge J, that is bolted to both sides of the planer frame, is set on a line with the cut of the upper cylinder. The planed surface will then rub or press against the upper platen J, so that the board is held down against the cylinder while the knives are cutting. The

fixed platen J is the reverse of the platen L, and equally as solid, and there is no yielding to the strokes of the knives on the cylinder.

Let us suppose the lower cylinder cuts first. It is necessary that some kind of a yielding roll or pressure-bar be placed above this cylinder, to allow for the variation in the cuts taken by the cylinder. This yielding roll or pressure-bar would not be solid or rigid enough to prevent the lumber vibrating when the knives were cutting. It could not hold the lumber firmly enough against the cutting action of the knives to prevent the resulting surface from showing the effects of this vibration. I cannot see how a solid platen or bridge could be placed over the lower cylinder if it cuts first. This construction of a fixed platen is possible when the upper cylinder cuts first.

To get the best results from any double surfacer, the cylinders should be placed as far apart as is consistent with the construction of the machine. If they are placed near together, without any solid foundation to hold the stock rigid, against which the knives can cut, there will not be as good planing as there would be on a machine that had a set of rolls between the cylinders to firmly hold the stock, and a solid platen over the lower cylinder to assist the rolls in preventing any chance of vibration while the knives are cutting.

How about the output? Do you know for a certainty how it compares in quality and quantity on different machines in your mill? Is it the basis upon which you purchase new machines? If so, you won't worry about first cost, for that will be the best token of earning power, and the best evidence of quality.

Neil Watson, Mull, Ont., reports that the trade for lumber has improved slightly during the last month, but for staves it is still slow and prices are lower than last year's. If the fruit crop turns out good, staves will certainly advance in price and the demand will be good.

Miscellaneous Items of News.

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, is making a short trip through Manitoba, Saskatchewan, Alberta and British Columbia in the interests of the association.

Mr. Wm. Robertson, secretary of the Rat Portage Lumber Company, Limited, Kenora, Ont., has been appointed to the responsible position of manager of the company's extensive business interests in British Columbia.

Statements of the imports of timber by the Colony of Fiji for 1907 which have recently been published show the following amounts: Case timber, £5,825; dressed timber, £8,398; rough timber, £13,783. Exports of timber to Canada amounted only to £60.

The lumber yard of the Mayook Lumber Company, of Mayook, B.C., has been entirely destroyed by fire. Four million feet of lumber were piled in the yard ready for shipment, valued at \$60,000. This was insured by New York companies for \$30,000. It is said the fire was incendiary.

Dr. B. E. Fernow, Dean of the Forestry Department of the University of Toronto, who will leave soon to start his work of surveying the Nova Scotia forests, has chosen as his assistants Dr. Howe J. White, a lecturer in the Forestry Department of the University of Toronto, and H. B. Ayres, a former student of Dr. Fernow at the University of Washington, and now specialist in forestry at the University of Minnesota.

It appears that the fires reported in the Spallumcheen and Salmon Arm districts of British Columbia in early May were more serious than the reports indicated. Hon. R. G. Tatlow, Provincial Minister of Finance and Agriculture, made an investigation while at Vernon recently, and learned that great damage had been done to farms and mills in Enderby and Mara localities, and much distress existed.

Mr. Brockwell Grier, of Montreal, died on June 6 at his late residence, 760 Sherbrooke street, in the 76th year of his age. Mr. Grier was a pioneer lumberman and timber merchant of the Ottawa Valley. He had been in business for 52 years, for many years in partnership with his brother, the late John Grier. The deceased was widely and favorably known, of sterling character and excellent judgment. While of a retiring character he always kept himself informed on general affairs. He was a man of rare talent and ability, and was highly respected and much beloved by all who had the good fortune to know him.

The following comparative statement of timber, masts, bowsprits, spars, staves, etc., measured and culled has been issued by the Quebec Supervisor of Cullers, under date of June 3rd:

	1907	1908	1909
	Cubic ft.	Cubic ft.	Cubic ft.
Waney white pine	146,440	268,240	184,160
White pine	18,000	30,080	27,520
Red pine	80	5,360	200
Oak	82,520	10,160	34,600
Elm	50,720	120	240
Ash	3,560	640	320
Birch and maple	63,640	53,320	45,080

Legal News of Interest to Lumbermen

Ownership of Logs under Lien—Contract for Purchase of Logs—Dispute Regarding Cutting of Bark—Fishing and Lumbering Interests Clash—Fire near a Siding

Title to Logs Under a Lien.—A case of much interest to lumbermen has just been settled in the New Brunswick courts, which involves the rights of a purchaser of lumber under a contract for the manufacture and delivery of lumber, in consideration of which contract the purchaser had advanced a considerable sum of money. The party with whom the contract was made, assigned before having delivered or commenced the manufacture of the lumber, but he had secured in the meanwhile some \$20,000 of advances from the purchaser. The case was known as that of McKean v. Randolph et al., and was an appeal from the decision in a former case in which judgment was given against McKean and in favor of Randolph, another claimant under a lien against the same party, one Estey, who had made the assignment. Randolph & Sons had a contract with Estey for the delivery and sale of four million feet of spruce and cedar logs, and all above that quantity which during the following season Estey might cut and haul from his lands on the Tobique river. This contract was dated some three months prior to the contract which McKean had made, and which was for the delivery of three million feet of merchantable spruce deals and battens, which were to be cut and manufactured at Estey's mills at Fredericton during the spring and summer of that year. The clause under which McKean held that he was entitled to a lien on the logs cut on the Tobique river was as follows: "It is agreed that for and in consideration of any and all advances that may be made by the purchaser on the above deals, etc., the purchaser shall have a lien on the said deals, etc., either at place of manufacture, or in transit for shipment, and also on the logs from which the said deals, etc., are being manufactured, wherever they may lie." At the time of Estey's assignment all the lumber got out by him under the contract with Randolph & Sons and other contracts, was in the Tobique river, over a hundred miles from Fredericton, where the manufacturing was to have been done. McKean claimed a lien on these on the strength of the contract and on the strength of several assurances which he had received from Estey, when making him advances of money, to the effect that he was amply secured by the logs in the Tobique river. The court held that these assurances were too vague to justify a lien on the logs and that the contract was for a lien on logs "from which the said deals were being manufactured." These logs could not be classed under the terms of the contract and therefore the lien could not be established.

Breach of Contract re Cutting of Bark.—Judge Riddell delivered recently the judgment of a Divisional Court of Ontario in the appeal of Boyd v. Shaw-Cassils Company against the judgment of Judge Latchford. The defendants had agreed to purchase from the plaintiffs a quantity of tan bark. Upon default of delivery of the bark by the plaintiffs, the defendants, instead of relying upon the contract of the plaintiff to deliver, and bringing an action against him, as they might have done, took advantage of the term in the contract allowing them to take hold of the property themselves. They took off 170 cords. The question arose whether this act of the defendants destroyed their right to damages, or simply had the effect of reducing the damages. Judge Latchford had decided in favor of the former contention and the Divisional Court upheld him, thereby depriving the defendants of damages. Another point in dispute was as to the right of the defendants to recover from the plaintiff money paid for dues, etc. Judge Latchford had found against the plaintiff in this regard, but the Divisional Court allowed the appeal on the ground that there was an express agreement upon the part of the plaintiff to pay such dues. The sum involved in this point was \$158.90, for which judgment was given.

A Fishing Club's Privileges in Lumbering Waters.—A unique case has arisen in Quebec wherein the right of a fishing club to interfere with lumbering operations has been made the basis of a protest to the Government. Some time ago the Ste. Anne Fish & Game Club complained that the River Ouelle Lumber Company was floating logs down various rivers to its mill, and to help this floating had erected a dam at St. Anne Lake. The water rose and prevented game coming to the borders. When the gates were opened the water carried off large quantities of fish. The courts compelled the lumber people to pay \$400 damages and prohibited the use of the dam. Upon receipt of the judgment the lumber company closed down their mills, throwing 400 men out of employment and causing an annual loss in wages of about \$125,000, with \$6,000 in stumpage dues and \$900 in ground rent. The fishing club contribute only \$90 a year for their privileges. Large deputations from various parishes in Kamouraska and L'Islet, headed by the mayors, curés and wardens, waited on Premier Gouin recently to revoke the fishing privileges and enable the lumber mills to reopen. The Government will send an inspector to look over the ground.

Destruction of Wood Near Railway Siding.—In the case of Scott v. Pere Marquette Railway Company, action was brought before Judge Teetzel and a jury at Sandwich, Ontario, to recover the value of lumber stored under an arrangement with defendants, on their property adjoining their tracks and which was destroyed by fire. Judge Teetzel found on the evidence that the fires were caused by sparks escaping from defendants' locomotives. The first fire, he found, was not caused by the company's negligence, but the second was. In the first place the defendants were negligent in allowing to remain along the side of their right of way near plaintiffs pile of wood, an unreasonable amount of long, dead grass, the growth of the previous year, and in which the fire started and spread to the wood. The cinder screen on the locomotive from which the sparks were emitted which caused the damage, was found to have three holes in it. If it had been properly inspected, which it was the duty of the defendants to have done, the defects would have been discovered. Judgment was therefore given for \$300, with costs in connection with the second of the two fires.

Ownership of Timber License.—Judge Morrison, of British Columbia, has given judgment in the case of McPhee v. Bridges. McPhee sued for \$1,000, the alleged price of a timber limit staked in the name of the plaintiff. Plaintiff made the trip to stake the limit, in company with Mr. Bridges, manager of the Crothers Lumber Company, Limited, of which he (the plaintiff) was an employee. The limit was staked in the plaintiff's name. Plaintiff claimed that Bridges had decided that the company would not take up the license. Bridges, however, claimed that the license was obtained in McPhee's name, because the company did not wish it to be known that they had timber in that locality. Judge Morrison decided in favor of the defendant, and said that in his opinion the plaintiff staked the limit for the company, knowing full well at the time the capacity in which he acted. The action was therefore dismissed with costs.

Commission for Sale of Berths and Mill.—The case of Messrs. J. W. Cook and James Henry Tearce against Waldie Brothers, Limited, and the original members of the Cook Brothers Lumber Company, of Ontario, Limited, which latter company has been absorbed by Waldie Brothers, Limited, was tried recently in the Non-Jury Assize Court, and resulted in a judgment for defendants. Plaintiffs sought to recover \$50,000 as commission on the sale of timber berths and a sawmill in Algoma for \$1,250,000, to the Waldie syndicate. They alleged that ultimately the consideration to the vendors was \$1,800,000 in the new company. The defendants, which included as shareholders of the old company George W. Cook, George E. Cook, Sarah P. Cook, Emma M. Cook, Ellen M. Casgrain and Hon J. P. B. Casgrain, denied that the sale was effected by the plaintiffs.

Breach of Contract for Purchase of Logs.—Judge Clement has given judgment in a trial court of British Columbia, in favor of the plaintiffs, in the case of Paterson Timber Company v. Canadian Pacific Lumber Company. The case involved the delivery of logs from the plaintiffs to the defendants under a contract for the purchase of the plaintiffs' output. The plaintiffs claimed damages for repudiation of the contract and the defendants made counter claim that the contract had been broken by the plaintiffs by the sale of two booms to other people. Judge Clement found that the sale to others had been made at the request of the defendant company's manager. He awarded the plaintiffs \$1,084.74 damages and dismissed the defendants' counterclaim.

Ownership of Lumber.—Chancellor Boyd has dismissed the appeal of the Robert Stewart Company, Guelph, Ont., from the decision of Mr. George Kappel, official referee, refusing their claim to a carload of cypress timber worth \$609, which was in the yards of the Toronto & Waterloo Office Furniture Company when that company went into liquidation. The Robert Stewart Company claimed that the wood had not been sold to the furniture company, but was merely stored on its premises.

Legal Notes.

The case of Price v. the Chicoutimi Pulp Company has been dismissed by the Privy Council.

Argument has been heard by Judge Howay in the Vancouver County Court in the appeal of the North Pacific Lumber Company, of Barnet, against a decision of the late Mr. C. C. Fisher, water commissioner, giving a grant of the water record of a small creek to the Nicholls Chemical Company, of Barnet. The respondents claim that the appellants already have the advantage of five creeks on their property, and that they cannot be entitled to come to the court and ask for this creek upon the respondent's property.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

A Modern Style of Edger.

The accompanying illustration gives a general view of the Gordon Hollow Blast Grate Company's "Tower Extra" 54, 60 and 66-inch edgers, the design of all three of these sizes being exactly the same. The only difference is in the dimensions. The rear table is not shown; neither are the saws.

The company assert that these are high-grade edgers at low prices, and that they make an excellent investment for the mill man, as well as being a standard advertisement for the manufacturer.

The bed is a single casting, so as to ensure absolute rigidity and keep the vital parts always in their proper relative positions. This is, of course, indispensable, if the machine is to continue to do good work. The main pulley and all the feed mechanism is on one side of the machine the bridgetree on the opposite side is removable, giving instant access to the saws.

The arbor runs in three long bearings, one of which is outside of the main pulley. The adjustable guide is simple, accurate and reliable. The arbor contains a feather key which drives all the saw collars, both stationary and movable. This is claimed to be much better than to provide the collars with individual keys. The scales for indicating the position of the saws are on the front end of the front table, where they are protected from the dust and can be seen readily by the operator. They are adjustable, to adapt them for edging or ripping scant, exact or full, according to the requirements of the trade. The pressure rolls swing from

The "Tower Extra" Edger.

the operator, which increases their efficiency, and makes them easy to raise.

Every part of the machine is made to template, which ensures a perfect fit and perfect adjustment. Every part is also lettered and numbered, to make it easy to obtain exact duplicates. Each table is ten feet long. There is a driven feed roll in front, and two similar rolls are in the rear. These rolls are extremely positive, but do not mark up the lumber. The back pressure roll comes between the two feed rolls in the rear, thereby holding the lumber firmly. The table and pressure rolls are broken, i.e., are in two lengths.

The saw collars are long and cannot bind, making it easy to shift the saws. The main pulley, etc., are put on whichever side may be desired. The machines are provided with either single or double feed. Attention is called to the practical character of every feature.

For quotations, etc., application should be made to the manufacturers, the Gordon Hollow Blast Grate Company, Greenville, Mich., who make the Gordon Hollow Blast Grate and the "Tower" line of edgers and trimmers.

An Opening for Canadian Machinery.

The Canadian Trade and Commerce Department reports contain, from Mr. Harrison Watson, of the London, Eng., branch, the following report:

"Recently a contractor who had secured the contract for the construction of a railway of the west coast of Africa called at this office. A section of the line is to pass through dense forest, which will necessitate extensive clearing operations, and the contractor was under the impression that the experience obtained in Canada in clearing land for similar purposes might be of practical value. With that object in view, he wished to get into communication with Canadian manufacturers of sawing machinery and other felling appliances who could not only give him advice, but would be also in a position to supply the necessary plant.

"Some twelve miles of the railway pass through thick forest, and it

is estimated that there will be some 25,000 to 30,000 trees, ranging from two to eight feet in diameter, which will have to be dealt with. These trees are of a widely varying character, but two or three kinds are of a species of hard red wood which is described as being harder than mahogany; others are similar to ash and deal, and there are a good many soft trees, such as cotton. The clearing is to be about 200 feet in width. In addition to felling the trees it would be necessary to cross-cut them, as many are from a 100 to 150 feet in height.

"Although Canadian lumbermen are accustomed to felling trees of almost all sizes—including trees of unusual dimensions, more particularly in British Columbia—their operations have been mainly associated with soft wood trees, and the conditions of climate and vegetation differ so essentially that it is somewhat problematical in how far Canadian experience would be adaptable to the west coast of Africa. However, the contractor is taking up the matter direct with some of the Canadian manufacturers. Quotations would be required f.o.b. Liverpool."

Did you ever figure out just how many knife marks there should be per inch on finished lumber from one of your planers—provided every knife in the cutter-head cut an equal share? Then did you actually discover only half or quarter as many on the finished stock? And then did you attempt the setting of the knives by the old-fashioned method of measuring out from the lip or some other part of the machine so as to make every knife show a mark? Did you succeed? There is one way to set them and be sure they are right, and that is by measuring from the shaft itself. There's also a way to perfect and maintain their accuracy, and that is by truing the edges while running. Knives rightly set and properly trued mean faster feed and finer finish.

The best practice in dressing box stock is to run a narrow surfacer at the fastest feed. This is just what the 15 and 18-inch widths of the new Woods No. 59 single or double surfacer are designed to do at a feed of 100 feet and upwards. This machine will do double the output of a wide, slow feed machine, will do it better and with half the labor cost per thousand. The patent round solid back cutter head gives strength, stiffness and safety, is easily balanced and practically free from distortion due to bolt strains. The patent truing devices joint the knives while running and give absolute assurance of equal cutting by all.

Henry Disston & Sons, Inc., the well known manufacturers, of Seattle, Wash., have one of the most attractive manufacturing exhibits to be seen at the Alaska-Yukon-Pacific Exposition. A full line of the famous saws made by that well known firm is shown.

The Simonds Canada Saw Company report extensive business all spring, as a result of which the extensive stock of saws carried has been greatly depleted. Another carload of mill saws and cross-cuts is now on the way from the firm's factory in Montreal.

Norwegian Markets Depressed.

Norwegian reports state that while sulphite cellulose remains as depressed as ever, with accumulating stocks, sulphate is rather better; prices may not be higher, but it is easier to sell. Mechanical pulp is gaining strength in spite of the wretched condition which is still reported in the paper trade, but the water scarcity has caused an unprecedented falling off in the winter production. Moreover, spring is late, and at the inland mills the water has as yet hardly commenced to rise. Many, if not all, the Norwegian makers find that their output has been so much curtailed that they dare not, at present at all events, sell any more for this year. Delivery over the year is hardening in consequence.

Great as has been the decrease of production in Norway, it has likely been even more serious in the middle and the north of Sweden and in Finland. Whereas the Swedish Gulf mills usually have heavy quantities for f.o.w. shipment, consumers will find this year that the quantity is a very small one. It is therefore not at all unlikely that prices may this year advance during the summer months; if this happens, it will be a misfortune to all concerned, producers as well as consumers.

The total Swedish export of planks, battens and boards (planed and unplanned) of fir and spruce in St. Petersburg standards for each of the years following has been: 1908, 816,114 standards; 1907, 884,690 standards; 1906, 1,015,623 standards; 1905, 973,076 standards; 1904, 915,390 standards; 1903, 1,039,462 standards; 1902, 1,004,606 standards; 1901, 903,787 standards; 1900, 1,009,448 standards; 1899, 1,026,692 standards.

The greater portion of the 1908 production was exported as follows: To Great Britain, 288,314 standards; France and provinces, 157,276 standards; Germany, 106,270 standards

CAMP DEPARTMENT

Fire Fighting in the Forests.

"Up, boys, up! Roll out! Get up, every last one of you! Quick, into your shoes, and hit the fire line!"

This hurry call was sounded early one morning in the middle of August, and before the echoes lost themselves in the hills the ranger and his men on the forest reserve were pushing on armed with shovel and mattocks to fight the flames, which destroyed thousands of dollars' worth of timber and at one time threatened to raze the camp in which the smoke-eaters were quartered.

Clambering up the steep hillside through the dense tangle of underbrush, over burning logs, beds of hot ashes and into volumes of thick smoke, the men lost no time to reach the fire line. Charles Hardee, who was in the thick of the fight, tells this story in describing the attack and the methods used to check the flames:

"Majestic old monarchs of the forest, whose swaying limbs seem to protest against their domain being intruded upon by this mortal enemy—fire, are one by one caught at the base, or by their over-reaching limbs, and, like immense torches flare up into a high sheet of flame, lighting up the heavens, sending columns of smoke skyward to hide the moon and stars from mortals' view.

"And later, as the sap and life has been eaten from them by the fire, they come crashing down the hillside, the echoes reverberating across the mountains, and lie there, to ignite more brush and more timber, a gruesome witness to the destructiveness of an uncontrolled fire, consuming scores of sections of the finest timber, and of the criminal carelessness of campers of whatever occupation, leaving their camp-fire unextinguished.

"It was to remedy, or at least check by every means possible, the result of someone's carelessness with camp-fire, cigarette or pipe, that the forest fire crews where we were, and many other localities under the cool leadership of the forest rangers, faced the fierce flames as far as was safe, inhaled the smoke until temporary retreat was compulsory, working with shovel and mattocks to smother and check the advancing tongue of fire, or by building fire trails through the unburned brush prevent its further spreading.

"Long distance 'copies' fail to fully portray the grandeur or dangers of forest fires witnessed or fought at night, and abler pencils than ours, present upon the spot, are necessary to do justice to so awe-inspiring a scene.

"As a crew of men move camp, their blankets, tools and foodstuffs upon their backs, from one scene of drying-cut conflagration to another still burning uncontrolled, can the reader imagine the confidence required to follow the leader, who is always a ranger, as he leads the way up or down the steepest kind of hillsides, through the thickest kind of jungle, the fire chasing, crowding, urging them on, jealous of the breathing spell the hard climb makes necessary?

"How his call of 'Follow me, boys, I know this timber well!' or 'Down below is water, boys!' inspires the man with renewed courage and strength to continue the toilsome climb or descent.

"Finally a spot suitable for camp is reached near a mountain spring. We drop our burdens and rest a little. If it happens to be near meal time, the inner man must at once be attended to or the outer man is of no use; then we sally forth to execute the well laid plan of the leader.

"Crossing over the divide, the sharp eyes of the ranger traced and found the spot from which an unextinguished camp-fire had eaten its way up a little ravine, spread to both hillsides, then over the entire divide to an estimated acreage of about sixteen sections of valuable cedar, fir, pine and tamarack timber.

"So one does not wonder at the Forestry Department straining every nerve to check so destructive an enemy to fine lumber as forest fires are.

"The humorous and enlivening vein of forest fire fighting was enjoyed by witnessing tenderfeet falling into creeks while skinning a log; by sharp mountaineer eyes finding the trails of all sorts of wild animals, such as bear, cougar, deer and bobcat; how, being fire-driven from one section to another they had crossed the 'burned over,' sometimes with enormous bounds, their paws, not being leathershod, feeling the hot ashes; how Mr. and Mrs. Bruin, uncomfortably overheated, had dug a hole in a mountain spring, wallowed in the water and soft mud to cool off, shaken himself or herself upon the bank and left a long trail of yellow-mudded paws on fallen timber.

"Oh, for a gun or two to follow the trail of Mr. or Mrs. Bruin! But our task was not that of bagging wild animals, and, though we got occasional glimpses of bear—our mouths watering for a juicy bear steak—we were there for the appetite-giving exercise of climbing or descending enormously high hills to reach the fires, and then fight them, during the day, with chances for the night crew calling for help as well.

"That no man was lost, crippled or killed by falling timber, or burned to death, the men owe to the cool, level-headed leadership of the forest rangers.

"The prayed-for rain at last came. It was welcomed, for it saved

to the country no doubt scores of sections of valuable timber, and not a man in our crew but heartily welcomed it for that reason." August Wolf, in "Wood Craft."

Reading Facilities in the Camps.

Some eight or ten years ago Mr. Alfred Fitzpatrick, then a student at Queen's University, found it necessary to visit the lumber towns and camps in northern California. This visit opened his eyes to a new field for educational and religious effort. He says that thousands of intelligent men were forced by their occupation to live many months at a time far removed from the influences of civilization. The total absence of any elevating influence had made these camps hot-beds of vice and degradation. The revelations made such a deep impression on his mind that he decided to devote his life to the work of improving the moral condition of Canadian frontier laborers.

After a few experiments in Ontario lumber camps had proved the feasibility of camp education, the work was organized under the name of the Reading Camp Association. In time the Provincial Governments were persuaded to assist in the work, and now travelling libraries are circulated among the camps by the Departments of Education of Ontario and Manitoba. Lumber companies have built reading camps for the benefit of their men. Moreover, as a result of the efforts put forth for the benefit of the shantymen, the laws governing the sanitary arrangements of the camps are more rigidly enforced than formerly and every company is compelled to build a hospital in connection with its camp. The compulsory attendance of a doctor at least once a month to each gang has also been instituted.

Every year the association sends out instructors to the lumbering, mining, fishing and railway construction camps in Ontario, Manitoba and Saskatchewan. The instructors are university students or graduates. They swing axe, pick and crowbar during the day and teach their classes at night. This summer about 25 instructors will be sent out to the different camps throughout the Dominion.

How the Big Trees are Felled.

When one of the huge trees in the Northwestern forests is to be felled the boss of the timber gang looks over the ground in the vicinity and finds the best place for the fall. If there is a marshy spot near the tree, so much the better, as it will strike the mud and water with less danger of splitting or being broken.

If the ground is hard and stony the men gather branches of different sizes and make an artificial bed. The branches are piled at intervals of ten to fifteen feet apart to a height of three or four feet above ground. Any small trees which might throw the falling tree out of the course marked for it are cut down.

When the direction of falling is decided upon and the tree's "bed is made up," the expert axemen get to work, one pair on each side. Sometimes a whole day is required to cut a "gash" in the side of a fir tree fifteen feet in diameter, but the axe men cut away steadily, usually following lines which have been marked around the trunk, showing the length of the cut, also the width of the notch which is allowed.

When the axemen have cut through from four to five feet of the fifteen-foot tree, it is ready for the saw gang. The big cross-cut saw, twelve or fifteen feet in length, is brought up, and its teeth covered with a coating of oil. They vary from half an inch to one and a half inches in length, and every tooth has been sharpened to an edge which is as keen as a file can make it.

This is one of the hardest tasks of the lumberman's work—sawing through the tree trunk. It must be done in a straight line, for if the saw should run "crooked" it may buckle and break, and in that case a new fissure must be cut.

The time to pull out the saw is generally indicated when it has gone through the heart of the trunk and is half way to the other side. The enormous pressure of the trunk causes it to sag a little into the hole made by the axes. A cranking sound is heard, and this means the beginning of the end. The saw is pulled out and two men begin cutting away on each side of the fissure.

In an hour or two after the chips have commenced falling enough has been cut away to start the forest giant, and it comes down with a crash, which may be heard a mile away through the still woods. The piles of limbs are crushed to the earth and pieces fly in every direction. The top branches frequently dig a hole several feet deep.

A Michigan lumberjack who was a common laborer in the woods of the upper peninsula ten years ago, saved his money, and recently found himself possessed of enough to indulge in a dream of long ago. He has bought a town and will name it after himself. The point of this story is not that he made a wise investment, but that a lumberjack saved money.

Sale of Valuable Timber Limits

THE UNDERSIGNED ARE INSTRUCTED
to sell by Public Auction en bloc, at the Russell
House, Ottawa, on September 30, 1909, at 2.30 p.m.,
the following Timber Limits situate in Block A,
Upper Ottawa, Province of Quebec, viz:

Berth 676 License No. 580 of 1908-09, south half
Lot 16, Range 4, Block A, 25 square miles; Berth
677, License No. 581 of 1908-09, south half Lot 14,
Range 3, Block A, 21 1/2 square miles; Berth 611,
License No. 582 of 1908-09, Grand Lac Victoria,
River Ottawa, 19 square miles; Berth 078, License
No. 583 of 1908-09, south half of north half Lot 16,
Range 4, Block A, 9 1/2 square miles; Berth 079,
License No. 584 of 1908-09, north half Lot 16, Range
3, Block A, 15 1/2 square miles; Berth 680, License
No. 585 of 1908-09, north half Lot 15, Range 3, Block
A, 18 square miles; Berth 681, License No. 586 of
1908-09, south half Lot 17, Range 5, Block A, 25
square miles; Berth 682 License No. 587 of 1908-09,
north half Lot 16, Range 5, Block A, 25 square miles;
Berth 606, License No. 588 of 1908-09, north half lot
17, Range 4, Block A, 25 square miles.
Total 183 1/2 square miles.

These limits are all surveyed and are easy of
access by a good roadway from Ville Marie to their
location. They comprise some of the best pine and
pulp wood areas in the Province.

Terms—10 per cent. of the purchase money to be
paid down at the time of sale, and the balance in
equal instalments at one (1), three (3) and six (6) months
thereafter with interest at the rate of 5 per cent. per
annum.

For further particulars and conditions of sale
apply to the Royal Trust Company (Ottawa Branch),
and to Code & Burritt, Solicitors, Carleton Cham-
bers, Ottawa.

Dated this 31st day of March, 1909

THE ROYAL TRUST CO., Ottawa.
Trustees of Sale.

Forest Resources of South America.

The forests of South America
are principally tropical, but in the
Andes Mountains and the southern
end of the continent are found for-
ests of a temperate and sub-arctic
character resembling somewhat
those of the United States and Can-
ada.

The tropical forests are totally
different from our north woods.
There are no solid stands of single
species or even of a few mixed
species. Instead, hundreds of
kinds of trees grow thoroughly
mixed and scattered through the
whole forest. This is one of sev-
eral reasons that makes logging in
tropical forests so expensive and
often unprofitable.

Rubber hunters have explored
nearly the whole tropical forest in
search of that necessary article of
commerce, but aside from that
South American forests have only
been cut into for a few miles back
from the coast and the principal
ports and rivers. Even in this area
only the species at present most
valuable for commerce have been
thus far cut, for example, cedar,
mahogany, rosewood, lignum-vitae,
fustic, and ironwood. Railroads,
where they exist, charge such ex-
orbitant freight rate that they have
not much encouraged exploitation
of the forests. In addition to this,
the sparsity of population and lack
of labor have also retarded devel-
opment of the forests.

Most of the woods growing in
these tropical forests are very
heavy, hard, and rich in color.
Greenheart is so hard that it nicks
the axes of the choppers and will
last for over one hundred years in
water. It should be noted here

that the style of axe used in the
tropics is quite different from our
common north woods axe and has
a very narrow bit. The American
broad-bitted axes would be very
ineffective on such hard woods.

Growth is so luxuriant and rapid
that ruins or abandoned farms are
promptly covered with a dense
young growth of trees and vines
that in a few years obscure the
marks of civilization. The great
forest of the Amazon basin is 1,-
100 miles long east and west, by
750 miles north and south. It
covers nearly a million square
miles in Brazil. But as it lacks
construction timbers it can not be
looked to for relief from the ap-
proaching scarcity in that kind of
wood.

This Amazon forest presents the
usual features of tropical growths,
a tangle of vines weaving the great
trees together and obscuring the
sky, and leaves hanging from the
branches like ropes, while under-
neath is a snarl of shrubs and
creeping plants in which are hid-
den many species of fibrous plants
and cacti with their sharp stings
and thorns.

The tropical American woods are
particularly adapted to withstand
the ravages of insects and climate.
In Paraguay, timbers of lapacho
and quebracho, which were used by
the Jesuits in constructing their
missions, are still well preserved in
the ruins. In contrast to this, our
own North American woods, which
are so extensively imported for con-
struction in South America, rapidly
decay and are eaten by insects.

The transportation difficulties in
the mountainous countries are so
great that the cities of the west
coast depend wholly upon imports,
chiefly from United States, for
their lumber. Their own mountain
forests, which are reported to be
very extensive and valuable, are in-
accessible.

In Colombia, all articles to or
from the interior must be trans-
ported a portion of the way at
least on pack animals, and pack-
ages are limited in weight to 150
pounds and in length to ten feet.

Lumber is not so extensively
used in construction of homes as
with us. Brick, stone, mud and
tile are extensively used, also bam-
boo, palm, etc.

In Colombia at least the Austra-
lian eucalyptus has proven a vig-
orous grower, just as it has done in
California. The American consul
at Bogota reports that this tree
years without cultivation.

Wood Preservatives.

More than 56,000,000 gallons of
creosote and nearly 19,000,000
pounds of zinc chloride were used
in preserving timber in the United
States last year. Small quantities
of crude oil, corrosive sublimate,
and other chemicals were also used.

These figures are based upon re-
ports to the United States Forest
Service of 44 firms which operated
64 timber treating plants. Assum-
ing that on an average one gallon

of creosote, or one-third of a
pound of zinc chlorid, will protect
a cubic foot of timber from decay,
more than 100,000,000 cubic feet
of cross-ties, piling, poles, mine,
and other timbers were given a
treatment that will greatly increase
their life and usefulness.

Never since timber treating be-
gan on a commercial scale in the
United States has the domestic
supply of creosote been equal to
the needs of the industry. With
the rapid development of wood pre-
servation in recent years, the in-
sufficiency of the home production
of creosote has become more mark-
ed. In 1908 69 per cent. of the
creosote used was imported. Near-
ly three-fourths of the imported
creosote comes from England and
Germany.

Creosote is distilled from coal-
tar, a by-product in the manufac-
ture of illuminating gas and coke
from bituminous coal. Were all
the tar produced which the coal
annually coked in the United
States is capable of yielding, it
would distill as much creosote as
reaches merchantable size in 25
is now used by the wood preservers.
Unfortunately, American operators
do not even get the fullest use of
the limited quantity of coal-tar
made in this country, for it does
not pay the operators to distill coal-
tar for creosote alone; so, unless
they can find a market for the as-
sociated products, it is not separ-
ated. Germany has gone far ahead
of the United States in the develop-
ment of coal-tar products, and her
exports of them to this country
are steadily increasing.

The zinc chlorid used in wood
preservation is all obtained from
domestic sources according to the
reports. Most of it is produced by
a few large chemical companies.

Cross-ties are particularly liable
to decay, since they are used un-
der conditions which are favorable
to the growth of the wood-destroy-
ing fungi. Consequently the rail-
roads have always taken a leading
part in timber preservation. Twelve
of the 44 firms which are operating
timber-treating plants are railroad
companies. The railroads also have
many ties treated by commercial
timber-treating plants.

Australian Timber for Fruit Boxes.

It is interesting to note how one
trade creates another. The expor-
tation of Australian fruits in boxes
has led to the discovery that some
Australian timbers can be economi-
cally used in the manufacture of
fruit boxes, for which pine has
hitherto been almost universally
used. It is found that blackbutt,
stringy bark, and messmate from
the Australian woods can be used,
and a Victorian exporter now uses
only fruit boxes made from euca-
lyptus, which are so strong that a
man may walk on them without
doing them any injury. Boxes
made of these woods instead of
pine, are now being used for pack-
ing Victorian apples, and it is stat-

ed that there is a saving of 5d.
per case by using Victorian timber.
Apropos of this we are informed
that the Minister of Lands in
Queensland has granted a contract
to a Westralian firm to cut grass
trees in Queensland for an English
syndicate who propose to erect fac-
tories in the various States for the
manufacture of fuel alcohol, var-
nish, etc.

Manager F. J. LeClerc, of the
Grand Rapids Cooperage Com-
pany, says that the supply of oak
stave timber is becoming exhaust-
ed and the barrel makers are ex-
perimenting with cypress, gum and
other woods in the hope of finding
a satisfactory substitute for oak,
or a method by which other woods
may be made suitable. For flour
and cracker barrels maple and beech
are used for the staves and elm for
the hoops, with the raw material
still in ample supply.

FOR SALE

43 Steel Flat cars in perfect con-
dition suitable for Lumber or Dry
Kilns Standard Gauge. Capacity
5 to 7 tons, will sell cheap to a
quick buyer.

Also New and Re-laying rails
from 12 to 60 lbs. with Fastenings.

Review of Current Trade Conditions

Ontario.

A decided improvement is reported in the demand for white pine. Enquiries from United States points have increased noticeably. Prices have stiffened a little as a result. For 1½-inch No. 1 mill prices are firm at about \$50, which means from \$53 to \$55 in Toronto. 1x6 and 1x12 white pine are scarce across the border. One manufacturer reports having sold 1x6 within the last week at an advance of \$4 over the prices of last October and 1x12 at \$2 more than last January's price. 1x5 to 8 is about stationary. 1x4 is about \$1.50 higher than in the early spring. 1x10 is also reported as becoming scarce. Eight quarter and 1¼ and 1½ shop lumber are growing scarce. Enquiries are numerous for birch, black ash and soft elm. The demand for spruce, judging from the enquiries, appears to be pretty brisk on the other side. The retail trade in Ontario is good. In fact, in spite of the otherwise general dullness it has been unusually good all spring. Last month's retail trade in Ontario was the best reported for a long time. It is expected now that there will be a steady growth of business and improvement in prices. Hemlock is still depressed and is selling at \$12 to \$12.50 at the mills in Michigan and Wisconsin, which keeps it in poor demand in Ontario. Lath are looking promising so far as the American market is concerned. The cessation of manufacturing at Ottawa has had very little effect upon prices. The reason for this is that operations were being curtailed at many points as it was.

Western Canada.

The lumber and shingle markets have not changed much during the past fortnight. A good business is still being done in shingles and in the better grades of lumber. The lower grades, however, are still too low to allow of any profit. In Vancouver, the local trade is exceptionally active. Lumber is selling at a basic price of \$11. Since the arrival of the spring supply of logs the price has declined by \$2 and \$2.50, the good grades being now obtainable at as low as \$8. The demand, however, still remains good, in fact greater than it was a month or two ago, but the increased supply has caused the slump. At Seattle, the market for spruce lumber has been improving during the past month, although the improvement has been too slight to warrant any increase in prices. There is not much activity in lumber chartering for the off-shore and coastwise business. Ship owners, however, are showing more inclination to get busy and an improvement is expected.

Eastern Canada.

The driving season on the St. John river has been one of the most successful on record. Everything except about 3,000,000 feet of spruce has come out into the main river. The old trouble at Van Buren, however, is holding the logs up and preventing manufacturers and lower river companies from obtaining their supplies. It is hoped that this matter will be soon settled once and for all by the international committee which is now working upon it. The price of lower grade cedar shingles has been reduced at St. John. "2nd clears" were cut from \$2.20 to \$2.10 and "Ex-No. 1's" were reduced from \$1.20 to \$1.10 per thousand. These figures relate entirely to the local St. John trade, and are the result of jobbers obtaining their supplies elsewhere than in the city. The situation in regard to the export of cedar shingles to the United States is characterized by doubt. Extensive buyers are holding off in evident distrust. "Extras" and "Clears" are unchanged at St. John, but have a decidedly easier tendency. In Boston there is a dull market for these lines, which is natural enough at this time of year. During the hot weather these lines, as a rule, decline by from 15 to 25 cents per thousand. Quotations

on dutiable "extras" at present are from \$2.90 to \$3, and on dutiable "clears" from \$2.40 to \$2.50 per thousand f.o.b. schooner St. John. English spruce deals are dull and unchanged, shipments having been very light for the month past. Prices are unchanged at about \$14.50 per thousand superficial feet for specifications containing 50 per cent. sevens and eights, 35 per cent. nines, and 15 per cent. elevens and up. Spruce lumber at Boston is quoted at a base price of \$24. Spruce is in fair call and prices are steady. Random is in moderate demand only. Prices, while generally firm, have been cut a little at times by dealers. For 2x3 and 2x4 the general price asked is \$22, but these figures have been shaded in some instances. At New York, spruce is more active than for some time past.

Great Britain.

Trade is reported to be gradually improving with a decidedly more comfortable feeling as to the outcome of the year's business. At London, however, the improvement in the spot market, which was apparent recently, has been slightly less noticeable, but fresh arrivals are going rapidly into consumption. At Churchill & Sim's recent auction sale 4 and 6x12 to 20-inch prime unsorted Oregon brought 1s. 6½d., and 1s. 6d., the 3-inch going at an average of 1d. less, and the sawn birch plank, unnamed port, went to one buyer at an average of 9d. At Swansea there is a decidedly better tone in the timber trade, with the demand continuing to improve and prices showing some advances. Stocks in the yards are low, spruce deals being particularly scarce. At Liverpool there is still no noticeable change in conditions, though hopefulness is prevalent. The spruce trade has shown absolutely no change, although prices for cargoes "to arrive" on c.i.f. terms for future delivery are better for ports round the coast than they are at Liverpool. At Liverpool, importers are asking higher prices because of the rise in freights. It is reported that 35s. has been done from Miramichi to west coast Britain. The spruce deal import season has commenced at Manchester and there appears to be a good demand for all sizes. It is not, however, so good as was expected. Prices are firm and will probably remain so for a couple of months. The import season for Liverpool will be somewhat later this season. A few Halifax parcels are still arriving by liners. Prices are very firm with the exception perhaps of 2½x7, which are not in much demand at Liverpool. They are ruling at about the same prices as 3x7. All sizes of scantlings are in good demand, especially 3x5 and 3x6-inch, and cargoes containing a good percentage of these sizes will be welcome. In general, however, the demand is only meagre. The demand for 3 x 4½-inch scantlings is good. The demand for birch planks is improving with values steady and showing an upward tendency. Prices of pine deals are steady with only a moderate demand. It is possible that they might ease off a little with fresh arrivals. Prices at Manchester show little change and the demand is quiet. Spruce deals and scantlings are in good demand but the buying is only steady.

United States.

Northern pine prices at Chicago, especially those of the upper grades, are holding up fairly well, although the demand is light and enquiries are few. Country yards are buying very little pine, but the factories are seeking the cheaper grades at lower prices. There is considerable improvement in the pole business at Chicago, and posts are also in good demand with prices firm. The better grades of hardwoods, particularly birch and quarter sawed white and red oak, are experiencing a fair volume of trade. Lower grades are weaker in price in almost all cases. Maple is in good demand for flooring. Little change is noted in Chicago

in the fir market during the last fortnight as the surplus of yellow pine is still to be worked off. Western pine is still in good demand at Chicago. Good prices have been obtained for a considerable quantity of No. 2 shop. The curtailment in the output of yellow pine is resulting in improvement in the Chicago market. Red cedar shingles are sagging again. White cedars are quiet. The extensive building operations, however, make it probable that demand and prices will soon improve. Lath are steady with a fair demand. Cooperage shows no change. At Buffalo, white pine is in fair demand with increased sales. Good lumber is scarce and the low grades are moving slowly. Prices are firm. Hardwoods are showing more activity. Plain and quartered oak is in good demand with firm prices for the better grades. Chestnut and birch are in good demand for good length of firsts and seconds. Maple flooring is active. Reports of business at New York are a little more encouraging than a month ago. Upper grade northern pine remains firm.

Market Correspondence

New Brunswick Drives Successful.

St. John, N.B., June 8.—Since last writing the major portion of the stream-driving season on the St. John river has come and gone. So far as driving the logs from the brooks and streams (which are branches of the St. John) is concerned the stream-driving operations have been more than ordinarily successful. With the exception of some three millions of feet of spruce, which quantity is hung up on the Little Black, the drives are practically out into the main river, or so near it that it might be considered so. The quantity mentioned is owned by the St. John Lumber Company. The logs were far back and a freshet of more than ordinary height would have been required to bring them out.

The old question of stopping the logs in order to sort them at Van Buren has again arisen. A local mill owner, who returned from Van Buren a few days ago, stated that there were 20,000,000 feet of logs waiting there to be sorted. This circumstance will prove a great stumbling block in the way of expeditious driving and, should the water fall off rapidly, no doubt a large portion of these will be in great danger of being hung in the main river, as well as many of those which will be stopped from day to day. After passing Van Buren the logs must be driven about two hundred miles before they reach the Fredericton booms. During the dry time of summer many portions of this stretch of river, especially between Woodstock and Grand Falls, are so low that to drive logs past them is impossible. Hence the anxiety of down-river manufacturers to hurry their logs forward with all possible speed while there is sufficient water to float them, and hence their strong antagonism to having the logs delayed for any reason. To sum up, the history of the industry on the St. John shows that, without delays of any sort, conditions must be favorable in every way before there can be a clear drive. The stopping of the logs for sorting purposes adds materially, in some cases vitally, to an undertaking which is already beset with many difficulties and in which expedition is imperative.

A feature of the week has been the reduction in the price of low grade cedar shingles to the local wholesale trade. From \$2.20 the price of 2nd Clears was reduced to \$2.10, and the price of "Ex. No. 1's" was reduced from \$1.20 to \$1.10 per thousand. The conditions governing this trade are entirely local in their nature. The reduction has been found necessary because local jobbers in many cases refused to place their orders under the higher schedule of prices, which went into effect early in the spring, preferring to bring their shingles from outside points rather than buy them from the local mill-owners.

Much has been written during the last week in regard to forest fires throughout the province, the provincial newspapers having devoted considerable space to this subject. As a matter of fact, the stories are rather overdrawn. While there have been fires of considerable dimensions in different parts of the province, their magnitude has by no means reached that point where it is sufficient to cause alarm. While the forest fire is always a menace to the owner of timber, and while the danger augments very rapidly under the proper conditions, the alarm at present seems to be chiefly confined to the newspapers.

The trade in cedar shingles for export to the United States seems to be marked by considerable hesitation. It would appear as if the large buyers had a considerable distrust of the situation. While there has been little, if any, change in local prices of "Extras" and "Clears," it would not be surprising if during the next week or two prices in these lines might be shaded somewhat. Reports from the Boston markets tell of a growing lethargy. Such a condition is quite usual during the height of the hot weather and it is also quite ordinary for prices in these lines to weaken from 15 to 25 cents per thousand. At present writing an enquirer would be quoted on dutiable "Extras" from \$2.90 to \$3 per thousand, f.o.b. St. John (schooner).

The trade in spruce deals for export to the English market shows a monotonous lack of change. Shipments from this port have been fairly light during the past month and much that has gone forward has been

to fill orders booked early in the year. So far, the advance, which it was hoped by local dealers and manufacturers would materialize during the early summer or late spring, has not materialized, and as far as can be learned, prices in general are much the same as those which have been quoted from time to time in previous correspondence. The local value of "English" spruce, in a specification containing say 50 per cent. sevens and eights, 35 per cent. nines, balance elevens and up, would be in the vicinity of \$14.50 per thousand superficial feet.

Ottawa Mills Resuming.

Ottawa, June 11.—The sawmills of the Ottawa valley have just resumed operations after some three weeks' idleness as a result of high water. During this time production dropped to the extent of two million feet per day. All the big mills were idle, and, with the exception of some sawing in Fraser & Company's mill at Deschenes, and W. C. Edwards Company's mill at Ottawa, manufacture was at a standstill. Among those most seriously affected are J. R. Booth, Hawkesbury Lumber Company, W. C. Edwards Company (Rockland), and Shepard & Morse. Mr. C. Jackson Booth gives the opinion that, as a result of the water trouble and the fortnight lost at the opening of the season, the output of lumber in the Ottawa valley this season will be reduced by 25 per cent. Apart altogether from high water, operations are being curtailed at some points. The Pembroke Lumber Company are running only one shift, while it ran day and night last year.

Since early in May there has been no shipping of lumber by barge, a very serious affair for the exporters. They are obliged to miss connections with steamers and undergo heavy expense. The tugboats of the Ottawa Transportation Company were tied up all winter at Ottawa. Lumber for them lay on the wharves. In some cases this lumber had to be left to protect the wharf, and besides, if a pile were broken the balance might be swept away by water.

In the last Ottawa correspondence reference was made to estimates of lumbermen who figured that floods would cost the trade in the Ottawa valley half a million dollars. It appears now that the loss will be far greater. In addition to the setback to shipping and manufacturing, allowance must be made for damages to 20,000,000 feet of sawn lumber which lies flooded in piling grounds. This lumber being chiefly deal, good sidings, etc., will be damaged to the extent of from three to five dollars per thousand. It was decidedly the worst time for any interruption to occur in shipping. Holders of lumber are severely affected through not being able to realize as soon as they expected on shipments to be delivered. The capital invested in the manufacturing plants, logs in the river, etc., all of which lay idle, is approximately \$50,000,000. Some lumbermen believe that the loss will approximate a million dollars.

The serious consequence of this spring's deluge brought the Government to announce that seven large conservation dams would be constructed on the upper Ottawa river in order to prevent a recurrence of the situation. This was still not satisfactory to the lumbermen, and a deputation headed by Mr. Peter Whelen, president of the Ottawa Board of Trade, appealed to Hon. William Pugsley, Minister of Public Works, to rush work on these improvements. The Minister's promise that something would be done was readily given. One contract has been let, but construction cannot begin until the water recedes.

Pending the return of normal conditions in manufacture, lumber prices in Ottawa did not change. Manufacturers report plenty of inquiries for good lumber. Mill culis and box lumber are not so easily disposed of, but holders of stock expect a revival of sales when the tariff across the border is settled. The dollar duty that is being considered would have a considerable effect on this low stock, which commands from \$16 to \$20 per thousand. The best shingle is hardly possible to get, especially since the cessation in manufacture. The chief handlers of lath say there is no surplus in that line. The demand for lumber locally is almost as brisk as in 1900 and 1903, following the disastrous fires in Hull and Ottawa. Building permits in Ottawa alone during May amounted to \$800,000, and for the two preceding months combined were half a million dollars. The increase is 100 per cent compared with the corresponding quarter of 1908. In addition to this, work has commenced on a million-dollar hotel and half a million dollar station by the Grand Trunk in Ottawa. The main material in these will be stone and brick, but a great quantity of lumber will be consumed in the interior.

Now and then lumbermen sell logs to each other, but that trade is waning. In fact most manufacturers produce their own logs, and when a sale is made there it is usually to get rid of certain lots of logs which have broken away in a boom accident or something similar. On this account and owing to the great difficulty to have any established standard of sawlogs, there is no regular quotation for them in the trade. Lumbermen engaged in grinding pulp give preference to spruce logs, and they command from \$12 to \$14 per thousand. But even then local conditions affect rates.

Activity in railway construction has increased the consumption of ties. The market is strong, the ruling price is from 45 to 50 cents for the six-inch cedar, tamarac and hemlock ties. These are more in demand than the seven-inch sort, as they fit in for repair work on nearly all the railways.

LINDSAY, ONT., CAN.

EDGINGS

Ontario

J. G. Stormes will erect a carriage factory at Shedden, Ont.

F. H. Lawlor, of Ekoba, Ont., will erect a sawmill at Thessalon, Ont.

The East City Furniture Company, of Peterboro, will enlarge its plant this year.

Shepard & Morse's sawmill, Ottawa, Ont., has resumed operations at full capacity.

J. A. Minchiner is organizing a company to build a furniture factory at Strathroy, Ont.

R. J. Watson, formerly of Burke's Falls, Ont., is building a sash and door factory at Revelstoke, B.C.

The Bancroft Manufacturing Company, Limited, will start a woodworking establishment at Bancroft, Ont.

Geo. Pedlar, of the Williams Organ Company, Chicago, proposes to build an organ factory at Sarnia, Ont.

The Golden Lake Lumber Company have purchased the Western Commission Company's (Toronto) sawmill at Barry's Bay.

Duncan Prentice, proprietor of a sawmill at Minden, Ont., was struck by a board caught in the circular saw and instantly killed.

The Dunbar Lumber Company, Limited, Elk Lake, Ont., capital \$40,000, has been incorporated to manufacture and deal in lumber.

The Chatham, Ont., Wagon Company contemplates doubling the capacity of its factory, which at present is 4,000 waggons and sleighs per year.

The Berlin Table Manufacturing Company, Berlin, Ont., capital \$40,000, has been incorporated. W. and H. T. May, and J. Burn, Berlin, are among the incorporators.

The Mozart Piano Company, Toronto has been granted a charter with a capital of \$10,000. H. C. L. Heidman and C. L. Carruthers, Toronto, are among the incorporators.

The Gordon Pulp & Paper Company will resume construction work on its new pulp mill at Dryden, Ont. The building will be of brick, 600 feet long, on a solid concrete foundation.

The Sarnia Nipissing Lumber Company, Limited, Sarnia, Ont., has been incorporated with a capital of \$40,000. D. W. Logie, D. S. Burnett and C. W. Belton, of Sarnia, are members.

A young man named Vinnet was instantly killed while working in the sawmill of the Keewatin Lumber Company, Keewatin, Ont. His clothing was caught in a shaft and he was badly mutilated.

The Hurdman Lumber Company, Limited, incorporated under Dominion charter, has been licensed to transact business in Ontario. George C. Hurdman, of Ottawa, is the company's attorney.

The by-law in Orillia to grant the E. Long Manufacturing Company a site and fixed assessment was carried by a large majority. The firm will spend at least \$25,000 in the erection of their new factory.

J. Landreville & Sons, coopers, 131 Tecumseh street, Toronto, sustained a loss of \$8,000 by fire. The damage was mostly to stock and machinery, and is covered by insurance. The barrels, barrel staves, and oils were an easy prey to the flames.

The large basket factory of Merritt Bros., Woodburn, Ont., was destroyed by fire recently. The origin of the fire is a mystery. There was in the factory a stock of about 70,000 baskets, and these also were destroyed, the total loss being between \$12,000 and \$15,000.

Samuel J. Shimer & Sons, incorporated under Pennsylvania laws, have been granted a license by the Ontario Government to manufacture rotary cutter-heads and other tools and machinery, with a capital not larger than \$30,000. J. Bell Dalzell, of Galt, is attorney.

The Algoma Lumber and Chemical Company, Limited, Toronto, has been incorporated with a capital of \$300,000 to manufacture lumber and wooden articles; also charcoal and wood alcohol. Among the incorporators are A. G. Ross and M. L. Gordon, barristers, Toronto.

While engaged with several others breaking a jam of logs at the C. P. R. bridge at Mattawa, Ont., a man named Lavalle was drowned. A second member of the gang succeeded in getting on a log, and after being carried rapidly down the river for half a mile, was rescued by some fellow-employees, who had escaped by clinging to a pier.

It is reported that Chicago capitalists have offered in the neighborhood of \$1,250,000 for the property of the Imperial Paper Mills Company, at Sturgeon Falls, Ont., with a view of straightening out the company's affairs. A number of unsecured creditors have, however, put in strong objection to the Minister of Mines and Colonization, Hon. Frank Cochrane, who has charge of the Province's timber policy. They ask the Minister to decline to renew the company's license for pulp wood lots unless satisfied that a reasonable measure of justice has been accorded them. The Minister is investigating the complaint.

The Macleod Pulp Company, Limited, of Milton, Ont., are manufacturing ten tons of board per day, which will be shipped to the English market. The pulp mills of the company, which have been running for about 15 years, and were acquired by the present company some 18 months ago, have a largely increased production, and during the present year the output will be increased to 100 tons per day. Mr. R. B. Livermore, formerly with the J. & J. Rogers Company, of Ausable Forks, N.Y., has been engaged as superintendent. A new steam plant is being installed, and later on in the year new driers and other machinery will be added. New water wheels and pulp grinders are also being installed.

Eastern Provinces

J. Eveleigh & Company, trunk manufacturers, Montreal, will build a new factory in Montreal at a cost of \$70,000.

W. W. Scott, Montreal, is organizing a company with a capital of \$20,000 to manufacture interior woodwork and furnishings.

Jas. Dempster, of Halifax, N.S., well known in connection with the manufacture of woodwork supplies in that city, died recently.

The Swedish Canadian Lumber Company, Limited, Nordin, N.B., capital \$750,000, has been incorporated to take over the Rosebank Lumber Company and carry on a general lumber and sawing business.

Tenders are being received until June 19 by H. A. Turner, Riverside, N.B., for the sale of all trees twelve inches in diameter, 18 inches from the ground, suitable for lumber, now standing on two lots of land, one in Caledonia and one in Hopewell.

The large lumber business and mill of the Edward Sinclair Lumber Company, at Bridgetown, Miramichi, N.B., has again changed hands, the former owners, William and E. H. Sinclair, having repurchased it from John McKane. Operations will be resumed at once.

Robert Hannon, of St. Stephen, N.B., was accidentally drowned in Chiputneticook lake, near Vanceboro, on June 2. He had been employed for a number of years as foreman for F. H. Todd & Sons, and while on board a small steamer which was towing a raft of logs, he accidentally fell overboard and before assistance could reach him was drawn under the logs and drowned. He leaves a widow and two sons—Robert and George.

British Columbia

J. McKinnon has started a woodworking business in Wapella, Sask.

C. H. Dickie, of Duncans, B. C., will erect a sawmill on Quamichan Lake.

The Selkirk, Man., Match Company's factory at Selkirk, Man., is nearly completed.

The Albera Western Lumber Company, Limited, Vermilion, Alta., has secured a charter.

The Manning-Sutherland Lumber Company, Limited, Camrose, Alta., has been incorporated.

The Carlin sawmill, near Kamloops, B.C., was recently destroyed by fire at a loss of \$75,000.

The Traub Furniture Manufacturing Company, Limited, Edmonton, Alta., has been incorporated.

Wortman & Ward, manufacturers of washing machines, will probably build a factory at Estevan, Sask.

The Emerson Lumber Company's new saw and shingle mill at Eburne, B.C., will shortly be in operation.

E. D. Rorison & Son are building a saw and shingle mill near Eburne, B.C., at a cost of \$100,000.

It is understood that the J. S. Emerson mill to the east of the Wallace, B.C., shipyards, has been purchased by a syndicate.

The Carrigan mill, on Salmon river, B.C., was recently destroyed by fire. Loss, \$35,000. Bush fires were the origin of the conflagration.

The International Lumber Company, Winnipeg, has been chartered to build and operate saw and shingle mills, sash, door and blind factories, etc.

There is said to be a good opening for a sash and door factory at Camrose, Alta. The secretary of the Board of Trade will supply information.

A large lumber and shingle mill is to be erected near the water front on Esquimalt Harbor. The names of the promoters have not been divulged.

The Winnipeg Excelsior Mills is a new company just formed for the manufacture of excelsior or wood fibre for packing. It will erect a plant with a capacity of six tons per day. F. J. Wellwood is manager.

The Thompson Lumber Company, Limited, Selkirk, Man., has been incorporated to build and operate sawmills, shingle mills, planing mills, etc. J. J. Jackson and Bedford Thompson, of Winnipeg, are among the incorporators.

The news that Vancouver harbor is to have a floating drydock is being hailed with much satisfaction by owners and masters of vessels. The necessary order-in-council has been passed at Ottawa. The dock, it is said, will be built to accommodate vessels 600 feet in length, and will have a lifting capacity of 11,000 tons.

The first logs of the season came down the Saskatchewan river to Edmonton, Alta., early in June, and the boom of the Edmonton Lumber Company was soon filled. The lumbermen expect to have about 20,000,000 feet of a cut this year, about half of which will go to John Walter. These logs will all come down during June.

Chas. H. Bottrill, engineer in charge of a donkey engine at Camp No. 3, of the Fraser River Lumber Company, Limited, at Reid Island, B.C., was killed instantly while at work. He was working the donkey engine in pulling logs out of the water and was struck by a post, his head being crushed beyond recognition. Deceased was a member of the British Columbia Association of Stationary Engineers.

One of the biggest pulp wood deals in a number of years is reported from Vancouver, B.C., some \$250,000 cash being handed over to the Canadian Pacific Sulphite Company, the vendors, to Thomas Meredith, of New Westminster, and R. W. Gibson, of Victoria. Forty-one sections of the timber are located on Owekno lake, at the head of Rivers inlet, and twenty-nine on Princess Royal Island. These latter are about 75 miles from Prince Rupert. On the 41 sections it is estimated that there are 787,000,000 feet of timber, 400,000,000 feet being fir, while on the Princess Royal tract the amount is 540,000,000 feet. This fir is the farthest north belt of the province, and is of particularly good value. It is the intention of the purchasers to erect a mill within a year. The price at which the sale was made is about \$5.75 per acre. Once railway construction is completed, the purchase will prove of great value.

The following companies connected with the saw and planing mill industry have been incorporated under British Columbia laws during the past month: Nanoose Lumber Company, Limited, capital \$25,000; Rivers Inlet Lumber Company, \$1,000,000; Nahmint River Lumber Company, \$250,000; North Kootenay Land & Timber Company, \$750,000; Howe Sound & Northern Boom Company, \$50,000 (to purchase booming rights on east branch of Squamish river from David C. Irwin); North-West & British Columbia Timber Company, \$150,000; Pacific Woods Company, \$100,000; Pitt River Lumber Company, \$50,000; Johnson Shaw Lumber Company, \$6,000; Wolverton & Company, \$100,000; Bar Harbor Lumber & Brokerage Company, \$10,000; Crescent Lumber Company, \$100,000; Bay City Sash & Door Factory, capital \$15,100, shares \$100 each; Crescent Lumber Company, Limited, capital of \$100,000, shares, \$100 each; the International Investment Company, Limited, capital \$1,500,000, shares \$100 each; B. C. Sash & Door Company, Limited, capital \$50,000, shares of \$100 each.

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

452. Boxes.—A firm in Durban, South Africa, desires to get in communication with Canadian exporters of wooden boxes.

552. Paper.—A South African firm ask for quotations for paper 10,000 to 15,000 sheets.

555. Wood dowels.—A firm of general woodenware importers are in the market to purchase supplies of wood dowels from Canadian manufacturers and desire full details as to size and lowest possible prices for shipments to Newcastle-on-Tyne, England.

586. Wrapping paper.—A large South African firm wishes to have quotations from exporters of wrapping paper.

592. Window frames.—A Lancashire firm asks for sizes and prices of window frames from Canadian manufacturers.

593. Pine scantlings.—A Liverpool firm desires to obtain prices of pine scantlings from Canadian shippers of same.

594. Spruce scantlings.—A Manchester firm asks for prices of spruce scantlings from Canadian exporters.

595. Spruce deals.—A Manchester firm asks for prices of spruce deals from Canadian exporters of same.

596. Birch squares.—A Manchester firm desires to correspond with Canadian shippers of birch squares.

598. Oak spokes.—A Lancashire firm asks for prices of oak spokes finished dressed 1½-inch up to 4-inch rising by ⅛-inch, from Canadian manufacturers.

604. Wood pulp.—A Manchester firm asks for samples and prices of wood pulp from Canadian exporters of same.

627. Lumber.—A South African firm of general merchants asks for catalogues, etc., from exporters of lumber.

628. Doors and windows.—A South African firm of general merchants asks for catalogues, etc., from exporters of doors and windows.

653. Woodenware.—A South African firm of merchants asks for catalogues, price lists, etc., from exporters of woodware.

699. Woodenware.—A firm in Birmingham, Eng., desires to get into communication with good concerns desiring to ship veneer, maple blocks for mangle rolls, and other woodenware to Great Britain.

723. Agency abroad.—A north of England firm is desirous of obtaining agencies for Canadian lumber exporters.

735. Wooden goods and timber.—A London firm would like to get into communication with Canadian manufacturers of wooden goods, such as picture and looking-glass frames, household utensils, tools, etc., who wish to develop export trade. They also desire to hear from timber exporters.

676. Elm.—A London firm wishes to buy supplies of Canadian elm in one-inch boards planed on one side, 16 feet x 14 inches and 14 feet x 24 inches.

697. Maple floorings and strips.—A Leicester and Hull firm of timber importers are buyers of maple floorings suitable for roller-skating rinks; also of rough maples strips of prime quality, 1¼ x 1½ x 3, and wish to hear from Canadian manufacturers.

Australias Imports of Wood.

From preliminary returns which may be taken as approximately correct, Australia imported timber in 1908 to the value of £1,890,835 and exported timber (chiefly hard woods) to the value of £1,043,482; New Zealand supplied about £400,000 worth of kauri and white pine; America over £500,000 of Oregon (Douglas fir), hickory, spruce, staves, etc., from the Baltic came £300,00 worth of red and white pine; and from Japan and Manchuria, £35,000 worth of logs not sawn and spars in the rough.

The value of the timber imported by the different Australian states is given as follows:—

New South Wales	£702,942
Victoria	695,871
Queensland	9,667
South Australia	387,998
Western Australia	60,981
Tasmania	33,376

Total£1,890,835

The much heralded Code of Trade Ethics, which was discussed and passed in the form of resolutions at a convention of lumbermen in the United States, does not seem to be working out in practice. Western manufacturers of shingles report that the slight drop in the market has resulted in a considerable increase in the cancellation of orders.

1894 - 1909

I have much pleasure in stating that I have been using your "Camel Brand" Hair Belting for the last six years as it gives me the best satisfaction and I shall continue to give it the preference as long as the quality remains as good as formerly.

10% More Lumber
with the

Same Machinery and Crew!

Just think of it!

A 10% increase in your output without any addition to your expenses!
And in many cases this is a conservative estimate.

The Gordon Hollow Blast Grate

will make your boilers from 25 to 50% more efficient than they are now, giving you all the steam you require every hour in the day, regardless of the weather.

It also burns green, wet or frozen sawdust, producing as good results with this class of fuel as a draft grate gives with dry wood.

It is equally valuable for burning wet or green slabs, etc.

It saves labor in firing.

It is so extremely durable that in the end it is far cheaper than any draft grate.

Adapted for either ordinary furnaces or Dutch ovens, and for any number of boilers, from one up,—No change in construction necessary. A hole must be made through each wall, for the pipe; aside from this, not a brick need be disturbed—The largest outfit can be installed between quitting time Saturday and starting up time Monday morning—No difficulty about maintaining a fire at night, when the blower is idle, and no objection to so doing.

While the "tuyere" is largely self-cleaning, we also provide the blast bar with a large blow-out.

**Sold on Approval.
Thirty Days Allotted for Trial.
We Pay the Freight.**

In writing for prices state how many boilers you have and whether you have plain furnaces or Dutch ovens, and give width and length of grate surface or surfaces.

Gordon Hollow Blast Grate Co.

Greenville - Michigan

The largest manufacturer of grates, edgers and trimmers in the World.

Woods Patent Truing Devices

Woods Planer and Matcher
with top and bottom Truing Devices out of use.

are the most important accessories applied to the planer.

They do what it is impossible to do in any other way—true the knives to a perfect cutting circle **while running**.

They enable each knife to do its duty; all knives cut exactly alike. The finish is vastly improved and the output increased.

The Madison Williams Manufacturing Co., Limited

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

R. H. SMITH CO., Limited

— St. Catharines, Ont. —

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE**, as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"

REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

R. H. SMITH CO. Limited St. Catharines, Ont.

Why You Should Use The Shimer Cutter Heads

For Flooring, Ceiling, Siding, Ship Lap, Jointing, Double
Ceiling, Doors, Sash, Blinds, etc.

It has been demonstrated many times that monies invested in a small outfit of the Shimer Cutter Heads will save their cost within a few weeks use.

Every time your foreman sharpens an old-fashioned Door, Sash or Coping Bit he must carefully bring it back to the proper cutting shape, consuming a considerable portion of his time. Usually a high priced man is thus fastened to details when his service could be handled to better advantage if using the Shimer Cutter Heads especially fitted to your patterns.

These tools being made per order, carry in their outline the perfect counterpart of the work, thus by simply filing the Bits and setting them to the gauge, the fitting of the manufactured parts is assured.

The difference in the expense items will soon save the cost of the tools.

We will send them on trial 30 days to any responsible manufacturer. This gives opportunity to try the best and most complete tools for planing mill work. Address

PETERBORO SAW MILLS

Does it Make any Difference to You What Kind of Sawmill Machinery You Buy?

We leave it to you—isn't it reasonable to suppose that a firm who have been manufacturing sawmill machinery for over 50 years should have learned enough about it to make their machines reliable?

Do you think our machinery could be sold for that length of time, if it were not always satisfactory in every way?

The success of our machinery has been founded upon quality—nothing inferior has ever gone out of our shops, and we are to-day taking as much care as we ever did to make our machines right.

Our experience has a real cash value to you, because we **know how** to make our machines so they will work properly, and turn out a large quantity of well-sawn lumber; and further, they are very nearly "repair-proof"—and you know what that means to you.

We guarantee for our machinery :

Proper Operation
Great Capacity
Accurately Cut Lumber
Small Repair Bills

And all our 50 years' experience and reputation is back of every machine.

Shall we send you our Catalogues?

The Best Procurable

With modern mechanical equipment and practical workmen we manufacture

Detroit Colonial Columns

of the highest grade possible. The "Lock Joint" used in our columns prevents all possibility of shrinkage and forms a perfect surface.

We endeavor to market well-finished columns in the various styles at reasonable prices, and the popularity they enjoy with architects, builders, etc., indicates our success in this line. Retail dealers should investigate our products.

Stocked in Oak, Birch, Chestnut, Pine, etc.

"I Am Convinced
**Simonds
 Shingle
 Saws**
 Have Saved Me Money"

A man bought nine 40 inch Simonds Shingle Saws.

He wanted the best and paid the price.

He knows whether he won or lost on the deal.

A careful record of Shingle Saw cost was kept, with the result that after a few months the record showed, in that mill, the saw cost per thousand shingles cut to be slightly less than one-half of one cent. About 9 cent saw cost for twenty thousand shingles.

That is why this Millman said he was convinced Simonds Saws are *money makers* because they are *cost savers*. This is a statement of fact. We have the proofs and

will gladly show them. If you want low cost use the right saws—Saws made of Simonds Steel, made by Simonds Methods. Dollar for dollar value is given. A saw to sell for less money than the Simonds cannot be as good. It cannot run as economically, and it will not make the same profit for you in the long run.

More shingles mean more money from the same block of wood.

For shingle saw prices and particulars, address our nearest office, giving size, number of teeth and gauge of saw desired.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Fire Problem Needs Greater Study

The extreme dryness which prevailed throughout Canada for three or four weeks during the last of May and the beginning of June brought with it the expected series of forest fires. Fortunately, just when the fires in most districts were on the verge of becoming serious, the long hoped for rain arrived and removed the danger. The occurrence of these fires at this season of the year is becoming so regular that they can be predicted with almost absolute certainty, when the weather is dry. The conservation of the natural resources of the country is coming to occupy a foremost place among public questions, and the preservation of the forests is perhaps the most important of all the problems of conservation.

It has frequently been said by those who are in close touch with actual conditions that, among the factors which lead to the depletion of the forests, all are far surpassed in destructiveness, by fire. The prevention of forest fires should be the first question to be studied by a national conservation convention, and no time should be lost by the Dominion Government in adopting effective measures and devoting ample sums of money to the purpose. Fire prevention methods and fire-fighting apparatus alone will not solve the problem. Public education must also be carried on in a systematic manner and stringent laws must be enforced to prevent the setting out of fires in dangerous places and the abandonment of unextinguished fires. It should be made a criminal offence to endanger the forests by fires, and those who are convicted of such crime should be dealt with rigorously. Unless the Government takes up this question seriously and decides to leave nothing undone which will assist in the prevention of forest fires they will fail in their duty, and these fires will recur annually, resulting, as in the past, in immense losses to the country.

The fires which recently occurred in the interior of New Brunswick should be a sufficient warning. At first they appeared to be of little moment. It was thought that they would be easily extinguished and reports were published to the effect that they were only of small proportions, but as the days went by and no rain came, they obtained proportions which recalled the great Miramichi fire. It was feared for a time that this historic conflagration would be equalled, if not exceeded. Fortunately, however, the rain came in time and the danger was averted. Good luck may not favor us so much another time. Serious losses have been reported from many other parts of Canada during the same period, but in most cases the rain saved the situation. Other serious fires are certain to occur during the summer and fall, as they have in former years. The Canadian Government is expected soon to call a convention for the consideration of the question of conservation, and lumbermen will have good reason for complaint if this question of forest fires is not made the first upon the programme.

Quebec's Policy Widely Approved

The announcement of Premier Gouin that the Quebec Government will forbid the export of pulpwood from the province of Quebec, has been received with satisfaction by lumbermen and pulp and paper manufacturers generally. Opinions are divided as to some details of the actual effect the restriction will have, but there is a general agreement that the move is a wise one and is absolutely necessary for the purpose of conserving the supply of Quebec pulpwood and inducing paper manufacturers to erect mills in Quebec. The course taken by the Quebec Government will bring that province into line with Ontario, which has reaped immeasurable advantage from its policy of forbidding the export of unmanufactured logs. The situation, from the commercial point of view, was well explained in a speech made in the House of Commons by Mr. E. N. Lewis, M.P., in March, 1908. Mr. Lewis had introduced a motion to the effect that it was the duty of the Government to place an export duty on pulpwood, which would be sufficient to induce its manufacture into paper in Canada and thus save to the labor of Canada six millions of dollars now lost.

In speaking of his motion Mr. Lewis said: "Millions upon millions of spruce logs, and hundreds and thousands of cords of pulpwood go yearly from Quebec, New Brunswick and Nova Scotia to feed the pulp and paper mills of the Eastern, Middle and Western States. What does Canada get for this? The Government, not \$1 a cord. The chopper, the loader, the teamster, the peeler, not much more. The railways a low rate on coarse freight. The whole result is \$6, or \$7 per cord left in Canada—I give a maximum figure; \$6 is absolute. Why, sir, they don't even allow us to carry the pulpwood in Canadian vessels. I have here a list of fourteen steamships carrying pulpwood last season from Quebec ports to Wisconsin ports, 12 of which are United States vessels and two Norwegian.

"Now, I repeat again—\$6, or \$7, left in Canada for every cord of pulpwood leaving it. Watch how the value grows afterwards. Every cord of wood ground to pulp has a value of \$20. Every cord of wood made into fibre has a value of \$30 to \$32. Every cord of wood made into paper has a value of \$40 to \$45 and up. My resolution asks this Government to take such action as will save to the labor men of Canada the \$6,000,000 lost annually. I firmly believe that \$20,000,000 would be nearer the mark. The United States shuts out our finished product, paper, but takes our crude product, pulpwood, makes it into paper and undersells us in Europe with their surplus dump.

"If the facts were properly placed before the farmer who has pulpwood for sale, he would see that he would be helped by an export duty more than anyone else. The sale would be just as great and more people would live in his neighborhood to use his other products and make his farm more valuable. If an export duty were to be put in force, sufficient mills could be removed to or built in Canada in eighteen months to supply the world.

"The pulp and paper industry gives more healthy and steady day and night employment to a larger number of men and women at higher wages all the year round than any other industry in Canada.

"We have no desire to prevent our American cousins having newspapers to read, but let them get our forests in the shape of the manufactured article. What happened when the Liberal Government of On-

tario restricted the export of sawlogs? Sawmills started humming in all directions, factories followed, the United States sawmill men came over here, and we were glad to have them. We will welcome the paper manufacturer also."

At present the stumpage rate in Quebec is 65 cents a cord with a rebate of 25 cents per cord for wood which is made into pulp or paper within the province. It is frequently stated, however, that this charge of 65 cents is not very often collected, and that the regulation is more honored in the breach than in the observance. The new law, when passed, will do away with this charge and prohibit the export of pulpwood. The situation of the farmer is one which has caused some difference of opinion in connection with this matter. He is accustomed to selling his pulp at a good profit, and the competition of the United States mills for his product has done much to keep up the prices. It is claimed by those who have opposed the restriction of the export of pulpwood, that the farmer will lose the benefit of the American demand and that being confined to the Canadian market, he will be at the mercy of the Canadian manufacturers of paper. At first sight this seems possible, but a concrete example will serve to show it in a different light. In the town of Grand-Mere, Quebec, there is a population of 5,000. There is also a paper mill there, and before the establishment of the mill the town was a struggling village with a few inhabitants only. At Batiscaan, there are

some 300 people who are largely engaged in the export of pulpwood. Batiscaan is one of the chief shipping centres of the International Paper Company. At one time this village was a larger place than Grand-Mere. The Laurentide Paper Company employs about 1,200 men at Grand-Mere, and has practically built this thriving town simply on "paper."

It is expected that what has occurred at Grand-Mere will be brought about also at many other points in Quebec if the Government follows the course which it has announced. Much interest will be taken in the matter until it has been brought definitely to a conclusion, and not the least of this interest will be centred about the course which will be taken by the United States Government in regard to the duty upon paper and pulp shipped into that country. It is conceivable that the United States may seek to overcome the Canadian objections to a free export of pulpwood by insisting on a high import duty on pulp and paper. This policy, however, would be founded upon a false assumption. Canada possesses the raw material for paper, whereas in the United States it is rapidly disappearing. From a strategic point of view Canada can afford to forbid the export of this raw material inasmuch as it will certainly mean that new factories will be established in the country and that the United States will accept the inevitable and reduce the import duty on manufactured pulp and paper.

The Other Side of the Wholesaler and Retailer Question

One reads a great deal in the lumber press about the complaints of retailers who declare that wholesalers are too fond of selling direct to the consumer. It is a matter upon which opinions differ, whether any successful wholesalers make a practice of selling in this manner. Retailers, however, frequently suspect it and sometimes find instances which incline them to believe that there is a good deal in the charge. During the last year or two wholesalers perhaps have looked round for sales in every direction so as to keep their heads above water, but in prosperous times few of them will care to be bothered about such a class of trade. Another side to the matter is the manner in which retailers patronize the wholesalers. In this, there is room for a good deal of improvement and it may happen that many a retailer, if he will look closely into his business methods, will find that he is not following out lines which will encourage a good understanding between himself and those from whom he obtains his supplies.

A wholesaler, well known in Toronto, was discussing this matter recently and outlined some of his experiences when he was engaged in the manufacturing end of the business. He was conducting a mill in a certain locality and a retailer in his neighborhood went far out of his way to antagonize him. The manufacturer came into the district after the retailer had been well installed in it for some time. The retailer was of the suspicious kind and disposed to look for trouble and for blue ruin wherever he could. He thought he found it in this case when the manufacturer entered the territory. He persuaded himself that the manufacturer was going to sell direct and to cut prices, and that he (the retailer) was certain to suffer heavily. After coming to this conclusion, he acted upon it. To put it in ordinary language, he "got sore" at once. The manufacturer, however, was inclined to give those with whom he did

business a fair deal whenever he could. He found out the prices which the retailer was charging and whenever a farmer or other customer came to the mill for lumber he quoted prices which were higher than those of the retailer. He found, however, that the consumers kept on coming to him in ever increasing numbers. For a time he was puzzled, but the reason was not far to seek. The retailer, having once become sore, allowed his disposition to interfere with his business. Farmers would come to him asking prices, and having found them would say that they would look around and probably come back again. The retailer would look offended at once, and say, "Oh, why don't you go straight to the mill?" The result was that the farmers did go straight to the mill and got in the habit of going there.

This mill had enough business of its own to attend to and did not encourage the consumers, but was unable to keep them away. The retailer had taken his stand in the beginning, however, and was of just that stubborn class who will not see their mistakes. He went along in the same way and soon found all his trade going over to the mill. Then he went about complaining of the manufacturer selling direct to the consumer, and made some people believe he had a real grievance, whereas the truth of the matter was that he was never cut out for the retail lumber business.

There are a lot of men in every kind of business who have no right to be there. Dealing in lumber, fortunately, seems to have a tendency to educate a man to his position quicker than most other businesses, and as a result there are not many of this class in the lumber business. There are some of them, however, and their fault finding is more of a detriment to the trade than any breach of trade ethics of which they complain.

First Hearing of the St. John River Log Driving Case

Relative to the announcement made concerning the meeting of the Canadian-American Board of Commissioners for the purpose of deciding the question of logging privileges on the St. John river in New Brunswick, and defining privileges, etc., of American and Canadian loggers thereon, the counsel for the Canadian members, Hon. H. A. McKeown, gave out the following statement of the scope of the commission agreed upon at its first meeting as to the points at issue.

It was the opinion of all, he said, that the most liberal interpretation should be given to the reading of the Ashburton treaty. The commission would probably take into consideration evidence as to whether or not the works of the St. John Lumber Company at Van Buren, Me., in themselves constituted an obstruction of the river under the treaty.

The commission would also probably consider if these works should be allowed, whether or not the whole expense of sorting the logs there should be borne by the company and whether they should keep officials to see to the proper division of the logs.

In reference to this he said the company held up all the logs until they had sorted out their own, and this meant delaying from 75,000,000 to 100,000,000 feet destined for New Brunswick mills farther down the river. Also, he added, some New Brunswick logs were kept and sawed in American mills, though paid for later.

The commission, Mr. McKeown said, would probably be asked to consider the effect of the diversion of the waters of Chamberlain lake at the head of the St. John river into the Allegash river in Maine. It would

also probably be asked to determine whether by formation of reservoirs or dams on a very large scale, for storing of water at the head of the St. John river, a sufficient volume of water for driving purposes could not be made at all times available.

The United States representatives are Messrs. Peter C. Keegan, of Van Buren, Me., and George A. Murchie, of Calais, Me., with O. F. Fellows, of Bangor, Me., as counsel.

The principal question at issue concerns the rights of the large mill owners along the river in building booms to hold their logs and prevent them from going down the waterway. This, the lumbermen hold, is in direct violation of the Ashburton treaty of 1818.

Every spring great quantities of logs are floated down stream to the mills by both Canadian and American lumbermen, and the presence of the booms is said to seriously impede the progress of the huge rafts of logs.

The commission held its first meeting at Van Buren, Me., on June 17, Chairman Barnhill presiding.

Attorney Fellows, the American counsel, filed a copy of the treaty of 1842, also maps defining the boundary of the St. John river.

The first witness called was Elias E. Jones, of St. Francis, Me., owner of a mill at the mouth of the St. Francis. He stated there were thirteen mills along the St. John river from St. Francis to Grand Falls, owned by different parties, including the Smalls, doing local business. He stated that 8,500,000 feet were stranded along the shores of the St. John river above Fort Kent from the Allegash, 10,000,000 from Fort Kent to Van Buren, 22,800,000 from Van Buren to Fredericton a week ago, and said there were shear booms all along the river from the Allegash to Fredericton, that the shear booms at Fredericton and those at Van Buren were similar, except those at Fredericton were four logs in width, while those at Van Buren were single. He stated he saw no difference between the gaps at Fredericton and those at Van Buren, and that he had never

seen any better. The delay was a serious matter for the owners of the logs, but he believed that many of the logs, especially those between Grand Falls and Fredericton, would eventually be gotten to the mill. These logs numbered about 22,000,000 feet. The 18,000,000 feet above the falls presented a different problem, and the greater part would be left.

Mr. Jones was cross-examined by A. J. Gregory, one of the Canadian counsel. He said that there is shear boom opposite his mill, placed there by a contractor for the Madawaska Log Driving Company.

He went down the St. John river in a batteau recently, starting at St. Francis and going as far as Fredericton. The logs he had mentioned at the forenoon session as stranded along the river were not in the water but high and dry on the shores and on islands below Grand Falls, some being as high as six feet above the high water mark. At the sorting works of the St. John Lumber Company at Van Buren there was a very small quantity of lumber and a large crew of men was sorting it. The witness said that the greater portion of Chouinard's and Kilburn's drives were held up at the Big Rapids for want of sufficient crew to drive them, there being but twenty men and boys.

Mr. Neal McLean, of St. Francis, Me., a mill owner of that place and also one of the directors of the Madawaska Log Driving Company, stated that he took all his lumber on the American side. He believed 130,000,000 feet in all was cut above St. Francis, of which not one-fourth was cut on the Canadian side. He said that at the Big Rapids a week previously there was a large amount of lumber held up and that only a crew of twenty-one men and boys were driving there. He went down the St. John river a week before and estimated that there was 20,000,000 between the mouth of the St. Francis river and Martin's Island, outside of 5,000,000 in the sorting works of the St. John Lumber Company. These 20,000,000 were not floating logs, but lying on shores and on islands. He said that there are shear booms all along the river on both sides and as many below Grand Falls as above.

United States Forest Production for the Past Fiscal Year

Statistics relative to the production of forest products are annually collected and published by the United States Bureau of the Census, in co-operation with the Forest Service of the Department of Agriculture, and an advance statement of the cut of lumber, lath and shingles in 1908 has been made public in response to the urgent demand for information concerning these products.

The figures indicate a falling off in production from 1907 of 17.3 per cent. occurred in 1908, or from 40,256,154 thousand feet, board measure, to 33,289,369 thousand feet, board measure, and this despite the fact that the canvass for the latter year was even closer than for the former—the cut of 31,231 mills having been included, as against 28,850 mills. While practically every section of the country shared in the decrease, it was most marked in the centres of heaviest production — the Pacific coast and certain parts of the yellow pine belt.

Yellow pine, Douglas fir, white pine, hemlock, oak and spruce, in the order named, were the species cut in largest quantity, though the clearly defined trend during recent years to a relatively increased production of other and less abundant woods continued.

The shingle production in 1908 was 12,106,483,000, as against 11,442,196,000 in 1907. Among the States Washington led with 60.2 per cent. of the total in the later year, Michigan, Louisiana, Maine and California following with 7.5 per cent., 5.5 per cent., 3.9 per cent. and 3.8 per cent., respectively.

The cut of lath, like lumber, showed a decrease from that of the preceding year, being 2,986,684,000, as against 3,663,602,000.

The "American Lumberman," dealing with the figures, says:

The grand summary of the lumber product of the country for 1908 will not surprise anyone who has kept in touch with the condition of the lumber market and the course of prices for the last twenty months. In fact, a reduction in product of 17.3 per cent. compared with 1907 is less than might have been expected; though it is probable that if a greater number of mills had not been reported for 1908 than in 1907, the output shown would have been a billion feet less.

The Bureau of the Census and the Forest Service, which are collaborating in the collection of these statistics, are evidently growing in the respect and confidence of the lumber industry, for while the output re-

ported is 17.3 per cent. less for 1908 than for 1907, the number of mills reported increased 2,381, or 8 per cent. Most of these mills are of the smallest class, but their product in the aggregate might reasonably be estimated at 1,000,000,000 feet; so that if there were any certain way of securing absolute figures of the lumber product of the country, it probably would be found that all previous reports had been under the mark.

Looking through the figures by States, some interesting facts develop. In some cases it is possible that there has been an actual reduction in the number of sawmills; those which have burned have not been rebuilt, and undoubtedly many of the smaller mills, under the stress of business adversity, closed down and were dismantled. Yet it may be permitted us to doubt if in many cases there has been a reduction in the actual number of sawmills. Oregon, for example, shows a reduction of 50 mills as compared with 1907. It is likely that the discrepancy is due to some operators who, having no product, failed to report. The same is probably true in most cases where a reduction is shown.

In volume of output some interesting facts are developed, especially as to the rank of the various States. Washington retains its place at the head of the column, but Louisiana gives place to Mississippi, whose product last year surpassed that of Louisiana by 140,000,000 feet, and also that of Texas as well. Louisiana was third, but Texas, which was third in 1907, dropped to the sixth place, falling below both Wisconsin and Arkansas. Michigan continued seventh, but Pennsylvania dropped from the eighth to the tenth place, being surpassed by both Minnesota and Oregon; the latter rose from the tenth to the eighth position. North Carolina, which was eleventh in 1907, fell below both Virginia and Alabama. The latter jumped from the fifteenth place to the twelfth, passing California, West Virginia and North Carolina. Maine retained its old rank, though with a heavily diminished product. Kentucky dropped from seventeenth to the twenty-first place, but Georgia improved its relative standing, as also did New York and Florida. Missouri showed the effects of its location and also of its waning timber supply.

Idaho advanced from the twenty-sixth to the twenty-fourth place, and is one of the few States which showed an absolute increase in product. The only States that increased their output were Georgia, Idaho, Massachusetts, Oklahoma and Colorado, and they to only a slight extent.

Lumber Congress Adopts Code of Ethics

Several Amendments made and the New Code Unanimously Adopted—
Attendance of many Delegates indicates Great Importance of the Subject

The second annual convention of the American Lumber Trades Congress, which was held at Chicago on June 7th and 8th, had an unexpectedly large number of delegates present, representing the manufacturing, wholesale and retail elements of the lumber trade. The most important matter of business was the consideration of the code of trade ethics which was compiled at the first meeting of the congress in 1908. During the year this code had been considered and acted upon at the annual meetings of most of the lumber associations of the United States and Canada and many suggestions for further revisions had been made as a result of this consideration. The code was considered clause by clause and a number of important amendments were made. Finally in its amended form it was adopted unanimously. The code, as amended, is as follows:

Order Methods.

1. (a) All orders taken by personal solicitation should be in writing and should be signed or acknowledged by both the buyer and the seller or by the authorized agent of both.

(b) All oral or telephone orders or conversations relative to such orders should be promptly acknowledged or confirmed in writing; otherwise there will be no evidence to hold either party.

(c) With mail or telegraph orders the original order received from a buyer should be considered the contract, and all settlements should be made upon the basis of the same, unless the buyer permits the seller to make certain changes, which may be requested in acknowledging the order. If shipment is made before the buyer grants such permission, or is able to instruct the mills, settlement should be made on the basis of the buyer's original order or such amendments as may have been made.

(d) Any changes or additions should be agreed to by both buyer and seller.

Order Specifications.

2. All orders should be complete and explicit and should specify the grades, terms and conditions of sale.

3. The latest grade names adopted by the different lumber associations should always be used in writing up each and every order or contract. Where the latest grade names are not used, or improper abbreviations are used, or any omissions cause a misunderstanding resulting in loss, it should be held that the party first writing up the order should be responsible and should sustain any loss incurred by reason of such errors or omissions.

Order Acknowledgment.

4. An order or contract should be considered binding when same has been duly signed by both buyer and seller or legally authorized agents of either party, or has been acknowledged by the same. (The man who is the exclusive recognized salaried salesman for a wholesaler or manufacturer, should be considered their "authorized" agent, and a salaried employee holding a position of responsibility should be considered the authorized agent of the buyer.) Such acknowledgment should be sent to buyer immediately upon receipt of order and in due course of mail. Failure to send such acknowledgment should release the buyer from his order obligations.

5. No commission man, unless specially authorized, should be regarded as having the authority to bind any seller on orders taken by him, and all such orders should not be regarded as binding upon the sellers until the same have been acknowledged by them as duly accepted.

6. The terms of sale as noted on original order or acceptance of same should be considered as much a part of the contract as the price at which the stock is purchased.

Should any shipment upon which cash has been advanced or discount has been taken, on arrival at destination, not be acceptable, for legitimate reasons, to buyers, or satisfactory adjustment cannot be made as to the acceptance of the stock, buyer should have the right to demand return of such money as he has paid, before allowing the shipment to be moved or disposed of elsewhere.

Delay by Carriers.

7. The seller should not be held responsible for delays incident to transportation beyond his control, unless otherwise specifically agreed.

Definite Time for Shipment.

When definite time for shipment is specified, failure to ship within said time should permit the buyer to cancel the order by wire.

9. Where definite date for shipment is not specified on order, the buyer should not be entitled to cancel such order inside of thirty days from the date of the order without the consent of the seller. Whenever shipments are not made within thirty days, the seller should forthwith

notify the buyer, giving reasons for failure to ship. Buyer should then have the privilege of forthwith cancelling by wire. Should he fail to so cancel, the seller should have an additional thirty days in which to ship. In the event of the seller's failure to so ship within the additional thirty days, the buyer should have the privilege of buying on the open market, and if the price shall have advanced, the seller should reimburse the buyer to the extent of such advance. Otherwise the order should remain in effect until cancelled.

10. No order should be cancelled after the same is loaded on the cars; provided, however, that it has been filled in accordance with the contract between buyer and seller, except as to date of shipment. A copy of bill of lading or equivalent evidence showing date of shipment should be forwarded with invoice.

Special and Worked Stock.

11. The seller should be protected in all cases where special stock has been manufactured or worked to apply on the order, providing the buyer is forthwith notified what such charge or loss will be on the part of the seller, if not allowed to ship out such portions as may have been worked to apply on the order, with the further understanding that shipment can be made with three days' grace, but the buyer should not be bound to accept the shipment if it cannot be loaded within the three days, regardless of the circumstances which may prevent the seller from so doing, except under car shortage conditions, when ten days' grace should apply.

Credit Rating.

12. Unless the buyer is rated and in good standing as shown by the well known lumber credit agencies, no order should be binding upon a seller until such credit and good standing shall have been satisfactorily proved to the seller. Such investigation should be completed within a reasonable time.

Transit and Storage Shipments.

13. Transit and storage shipments should be subject to the rules applying to direct shipments, except as otherwise stated and agreed to at the time of giving and accepting the order. Invoices for transit cars should bear the date of diversion. Where a specific car load is ordered, no other car should be substituted without consent of the buyer. It should be the duty of the seller to advise the buyer at the time the order for the transit car is accepted as to whether the shipment is actually in transit or in storage at some intermediate point between original shipping point and ultimate destination, and to give the purchaser all the information in his possession regarding the present location and movement of the shipment in order to avoid misunderstanding.

Arbitration.

14. Except when inspection is provided for by association inspection bureaus, claims on grades, also differences regarding contracts, should be settled by arbitration on request of the parties interested.

Whenever a case for arbitration arises, one referee should be appointed by the president of the retailers' association in whose territory the claimant resides, and a second referee should be appointed by the manufacturers' or wholesalers' association covering the district in which the shipment originated. Said referees, as appointed, should have the option to appoint a third referee, and all referees should be appointed with due consideration to convenience and expense. The expense of such arbitration should be paid pro rata, as the fault may appear.

Arbitration methods should be employed wherever possible in the settlement of all matters in dispute.

A written statement of the findings in each case should be made by the referees, and their findings should be final and copies should be sent to the secretaries of each of the organizations through which the referees were appointed.

15. In the matter of cost of inspection made by association inspection bureaus on lumber, the grade or measurement of which has been complained of, if reinspection shows the grade of the total amount of the item complained of to be within five per cent. of the grade invoiced, the expense should be borne by complainant; if otherwise, by the shipper. The shipper must credit buyer with the amount of degrade found by inspection, irrespective of per cent. determined, between the grade sold and the grade shipped, at an equitable price.

16. It should be the duty of the manufacturers and wholesalers to take an active interest in the marketing of their products through regular channels only.

17. It is the sense of the congress that the widest possible trade

publicity be given for the purpose of making known irresponsible, unethical and unscrupulous manufacturers, wholesalers and dealers.

18. It is the sense of the congress that this code of ethics should apply to all forest products handled by lumbermen.

Lumber Ranks Second in Manitoba Industries.

The Winnipeg "Tribune" in a recent article states that next to industries growing out of the grain trade, lumber industries rank highest in the Province of Manitoba and as nearly all the dealers are settled in Winnipeg these interests play an important part in the growth and development of the city. Winnipeg although away from the actual home of the lumber industry is yet the centre for the West, and the products of the forests both east and west find their way thither.

With the amazing demand for new houses in all parts of the West, the furnishing of material is a paramount industry. After the crop comes the demand for a better home, and Winnipeg shares in the natural development of both.

Winnipeg counts her lumber firms by the score and at the present time there are upwards of sixty. When one stops to think that over 2,000 new houses are erected in Winnipeg in a year one can readily understand the immense demand for lumber, and it can easily be seen that despite the big mills now operating, difficulty is experienced in meeting all the demands. The average building bill for a frame house is 30,000 feet, so that 60,000,000 feet are required to build the dwellings erected in Winnipeg in a year, to say nothing of the vast quantities used in the erection of factories, warehouses, stores and other large buildings.

The local companies have increased their facilities to meet the demands put upon them, and there is not one to-day that has not more than doubled its capacity of three or four years ago, or else has a new plant. The lumber trade in Winnipeg, while it is one of the most important, is only in its infancy, and if the dealers now hope to keep pace with the growth of the city they will again have to double and even treble their plans.

Ontario Counties Discuss Reforestry.

A meeting was held recently at Cobourg, Ont., under the auspices of the United Counties Council of Northumberland and Durham, to discuss the reforestation of the 15,000 acres of sand lands between Burketon and Rice Lake. There was a large attendance and the opinion was generally accepted that something should be done at once to check the spread of the sand area. Several local speakers testified to the fact that the area once grew splendid pine trees and would doubtless do so again if given a chance. They also related how, since the wood had been cut off, the "blow" sand had been covering up fences, fields and roads, and driving farmers from their lands. It was said the evils and dangers of the conditions on the ridges could not be exaggerated. Prof. Zavitz, of Guelph, told what had been done in holding the sand by planting trees.

Mr. Thomas Southworth, president of the Canadian Forestry Association, explained how municipalities might undertake this work, provided permissive legislation were secured, and what its financial aspects were. Dr. Fernow, Dean of the Faculty of Forestry, University of Toronto, gave at length examples of the planting of such waste land areas and the profits that had accrued. Mr. James Lawler, secretary of the Canadian Forestry Association, dealt with the need for agitation and organization. Some of the local speakers thought the municipality should own the land, others that the Provincial Government should purchase, but generally it was felt it should be worked out through co-operation. Resolutions were passed urging action, appointing a committee of council to go to work and arranging for a series of meetings through the counties next autumn and winter.

F. M. Eagleson, O.L.S., of the firm of Abrey & Company, Toronto, is now surveying timber limits south of Eagle lake and in the country lying between Whitefish Bay and the C.P.R., also on Dryberry, Deer and Sturgeon lakes. E. D. Bolton, O.L.S., of Toronto, is south of the C.P.R., east of Ignace along the Gull river, to the height of land between the waters running north and south. E. Seager is on the Winnipeg river and lakes tributary thereto, north of the Transcontinental and the C.P.R. A number of the large limits on Lake of the Woods, surveyed some time ago, are being sub-divided into smaller berths to meet the demand, and they will also be placed on the market this fall.

A Kenora, Ont., despatch says that the Department of Lands, Mines and Forests of the Ontario Government has now several engineers in the field surveying timber limits in that district, with the intention of placing the timber on the market early next fall, not later than the first of September, and probably earlier, so that purchasers will be able to operate during the coming season. The instructions issued to the explorers and surveyors state that the territory is to be cut into berths suitable to meet the requirements of tie men as well as sawlog men. This is to meet the demand of former permit holders. In no case will the limits be as large as they have been heretofore.

Annual Convention of the N.H.L.A.

Inspection Rules unanimously Adopted—Secretary's Report indicates encouraging progress—President Agler Re-elected

The twelfth annual convention of the National Hardwood Lumbermen's Association was held at Detroit on June 10th and 11th, and was largely attended. President O. O. Agler, of Chicago, occupied the chair. An address of welcome was delivered by Mayor Philip Breitmeier, and a reply was made by Mr. John M. Woods, of Boston, Mass.

President Agler in his opening address submitted a review of the events affecting the welfare of the association which had occurred during the past year. The year had not been a prosperous period for those engaged in the lumber trade. It was very doubtful if any other line of business had been more adversely affected by the depression of the past eighteen months. He was pleased, therefore, to note that the association was as strong as it had been a year ago, and probably so far as its organization went, was even stronger. The membership had increased from 634 to 656, a net gain of 22. The only organized opposition encountered by the association during the year had come from the local hardwood association of New York City. This, however, had met with dismal failure. President Agler extended his congratulations to the inspection department upon the volume and efficiency of the work performed by it during the year. Inspection was the keystone of the arch of the organization. Substantial progress had been made in efficiency and in uniform application of existing rules of inspection in widely separated markets.

The secretary, Mr. Frank F. Fish, of Chicago, submitted his report, which showed that since the previous convention a total of 51,167,661 feet had been inspected by salaried inspectors, which, added to the 49,120 feet covered by fee inspectors, give a total of 100,287,661 feet inspected. He said that he believed the coming year was certain to show greater gains in the number of members, as the association now enjoyed the confidence of leading buyers in all markets, and international inspection was recognized as the base for grading hardwood lumber by a large majority of both of the branches of the trade. The report of the committee on the inspection rules was presented by Mr. J. M. Pritchard, of Indianapolis, and was carried unanimously. The report merely made a few corrections in the rules, which were adopted at the meeting at Milwaukee and were put into effect in August, 1908. These rules had been in almost universal use since that time and in the main had been satisfactory. A number of other matters in the way of routine were attended to, including the presentation of reports by the committee on forestry; committee on transportation, and the committee on waterways. The matter of weights and the adjustment of claims against railway companies was brought up by Mr. F. S. Underhill, who introduced a motion to the effect that the association should endorse the weights as adopted and used by the National Wholesale Lumber Dealers Association with the following exceptions: Northern basswood, dry, 2,400; northern soft gray elm, dry, 3,000; northern hard maple, dry, 4,000; northern red oak, dry, 3,800. A lengthy discussion took place upon this subject and it was finally submitted to a committee consisting of Messrs. Ballou, Underhill and Diggins.

The election of officers resulted as follows: President, O. O. Agler, Chicago, Ill.; 1st Vice-President, F. A. Diggins, Cadillac, Mich.; 2nd Vice-President, F. S. Underhill, Philadelphia; 3rd Vice-President, O. E. Yeager, Buffalo, N.Y.; Directors for three years—J. M. Card, Chattanooga, Tenn.; Earl Palmer, Paducah, Ky.; C. H. Barnaby, Greencastle, Ind.; W. E. Hoshall, Eola and New Orleans, La.; J. L. Alcock, Baltimore, Md.; Geo. E. Hibbard, St. Louis, Mo.; John H. Jenks, Cleveland, O.; For two years—C. F. Sweet, Grand Rapids, Mich.; Alex. Lendrum, Kansas City, Mo.; For one year—Chas. B. Dudley, Memphis, Tenn., and A. H. Barnard, Minneapolis, Minn. It was unanimously decided that the next convention should be held at Louisville.

During the convention a number of entertainment features were given, which included special automobile trips to various points of interest, trolley rides about the city, boat trips upon the Detroit river, lunches, and a splendid banquet at the Cadillac hotel. The ladies were also entertained at a theatre party at the Detroit Opera House.

Mr. E. J. Palmer, manager of the Chemainus Lumber Company, reports that British Columbia mills are enjoying much better trade than those of Washington or Oregon, where retailers are waiting for development in the tariff revision question. The foreign trade is very weak and several export mills at Portland, Gray's Harbor and Puget Sound have closed down. A number of the smaller mills in Oregon and Washington have clubbed together for foreign trade because their market in the Eastern States has been practically closed. They are selling at very low prices. Mr. Palmer expects improvement in foreign trade immediately on the settlement of the tariff question. His plant at Chemainus is working at its full capacity, 200,000 feet a day, and the mill is shipping 160,000 feet. Practically all of this is going to the Northwest.

Plant of the Lindsay Lumber Mills

One of Ontario's Most Modern and Well Equipped Mills—Mr. John Carew's Activity and Business Ability Responsible for its Success—Description of the New Equipment

It is characteristic of Canadians that they are not loud or boastful. In many parts of this country men have built up large enterprises from small beginnings and no brass band has sounded their accomplishments. Canadians as a class achieve success through close attention to business and through perseverance along lines that are certain to produce the results desired. The lumber industry has helped many men to "make good," and very few lumbermen are heard to boast vaingloriously about

in a small shingle mill, almost on the site of his own fine sawmill, he filled every position that he now has to offer. Whether in the woods, on the river, or in the various capacities in which men work in mills and yards, the proprietor of the Lindsay Lumber Mills understands from personal experience the work that a man is called upon to perform and what he should accomplish. Twenty years ago Mr. Carew decided to launch into business for himself and, with only a few hundred dollars'

The Lindsay Lumber Mills, Lindsay, Ont., John Carew Proprietor.

their achievements. An example of the type of men who bear their successes modestly is Mr. John Carew, of Lindsay, Ontario, whose mills a representative of the "Canada Lumberman" had the pleasure of visiting recently. Everyone in Lindsay has a good word for "Honest John" as he is called.

Mr. Carew is a self-made man, and he certainly knows the lumber industry "from the ground up." He is a native of Victoria County, in which he is now the largest employer of labor. Starting as an apprentice

capital, started a small sawmill with a staff of six men. The sawmill he is now operating is his third, the second having been destroyed by fire on June 8th of last year, and the present fine mill put into operation on September 17th, having been built during the summer on the site of its predecessor.

Mr. Carew's property is very extensive. His timber supply is procured from his own limits in Victoria, Haliburton and Peterboro Counties, while in Lindsay the property he owns and uses in connection with

Office of the Lindsay Lumber Mills, Lindsay, Ont.

Carew's Planing Mill and Door Factory.

his operations extends for three-quarters of a mile along the west side of the Scugog river. Besides the sawmill and the large yards, there is on the property a fine planing mill and door factory. This latter building was formerly operated by other parties, but was acquired by Mr. Carew about three years ago, and he now handles his product through the various stages from tree to the finest interior finish. Mr. Carew employs an average of 150 men, but during the active season in the woods the force is considerably larger. The timber is transported to the mill by water, the towing being done by two tugs, "Beaver" and "Arthur," one of which is owned by Mr. Carew and the other by the Kawartha Lakes Navigation Company, of which he is president. The timber on Mr. Carew's limits is mostly hemlock, spruce, basswood, pine and cedar, the annual output of lumber being about six million feet board measure. The mills also turn out about eight million shingles, 125,000 railway ties, and large quantities of cedar posts. For many years Mr. Carew found a market in the United States, but latterly his output has been taken mostly in Ontario.

Both sawmill and factory are exceedingly well equipped. The size of the mill is 50 x 112 feet, with a solid brick boiler house 42 x 70 feet. The power in the mill consists of three large Goldie & McCulloch boilers, giving a capacity of 400 horse power. One large engine and two small ones run the sawmill, and there is an electric light plant in the mill and

John Carew, Proprietor of the Lindsay Lumber Mills.

yards. The mill is equipped with a large Waterous double-cutting band saw of the most improved type, two Perkins shingle machines and a lath mill. The foundations for the machinery are of cement.

After buying the factory as above mentioned, Mr. Carew spent nearly \$25,000 in equipping it with the most up-to-date machinery for the manufacture of sashes, doors, frames, interior finish, box shooks, mouldings, and hardwood flooring (bored and end-matched). The building is of brick, stone and cement, and is equipped with a modern blower system which conveys the refuse from every machine to the furnace. The main factory building is 50 x 110 feet and there is a wing 36 x 80 feet. Three large dry kilns are constantly in use, and the factory is operated by a steam plant of 100 horse-power capacity.

Mr. Carew has always followed the injunction "early to bed, and early to rise." He ascribes his success in no small measure to the fact that he has given the closest possible attention personally to the sawmilling operations, being "on the job" from early morning. His mill is always operated for the full season, as he makes a practice of running from the middle of April to the end of November. The property is connected with both the G.T.R. and C.P.R., the shipping facilities being of the best. Mr. Carew is now assisted in the management by his son, Frank, an active and industrious young business man who is said to be "a chip of the old block."

Like most successful business men, Mr. Carew has been called upon to interest himself in outside affairs, and he has been in demand as a director for various commercial enterprises. Besides holding the con-

trolling interest in the Kawartha Lakes Navigation Company, of which he is president, Mr. Carew is a director of the Madison Williams Manufacturing Company, a director of the Horn Bros. Woollen Company, and vice-president of the Dominion Wheel Company, all of Lindsay. He is also vice-president of the Canada Sand Lime Brick Company, of West Toronto, a director of the Algoma Lumber & Chemical Company, Limited, and president of the Bobcaygeon Lumber Company, in which he is largely interested. The Lindsay Board of Trade claims a share of his attention and he is a past president of that body. As a member of the Board of Education and as one of the board of governors of the Ross Memorial Hospital, he has done good service to his town. He was selected last season as president of the Lindsay Rugby team, an organization which put in the field a winning team. A very active spirit is Mr. John Carew. "I wish we had a dozen such men in Lindsay," is the way one citizen expressed local sentiment.

Maine Log Scaling Commission's Report.

The Maine State Legislature in 1907 appointed a commission of three, with the Forest Commissioner an ex-officio fourth member, to investigate the methods of scaling logs and lumber and to report to the next Legislature. On this commission William J. Lanigan, of Waterville; Fred A. Gilbert and Hosea B. Buck, of Bangor, and Edgar E. Ring, Forest Commissioner, of Orono, were appointed by Governor Cobb. It is a commission of practical business men from wood-using industries. After holding hearings in the different lumbering districts of Maine, the following conclusions have been reported in substance:

"The method of measuring manufactured lumber seems satisfactory and no change is recommended. The lack of uniformity in methods of scaling logs leads to great confusion and general dissatisfaction on the different rivers in Maine. The log rules in use, especially the New Hampshire and the Maine or Holland rules, give fair results only for short logs. The board foot is not the proper unit for log measure since it is relevant only in case of lumber manufacture, but entirely irrelevant in pulp, staves, veneer, and other industries. The cubic foot should be the unit of measure, and each manufacturer should calculate the product he could manufacture in board feet, pounds of pulp, number of staves and square feet of veneer, and fix the price accordingly. The contract logger figuring in cubic feet would then be paid according to the weight he handles, whether the logs are large or small. In contracting by the thousand board feet, as is now done, he handles a larger weight of small logs per thousand than of large logs. The commission recommends the substitution of a cubic foot caliper rule as the legal rule for Maine, arguing that besides applying to all industries involved it would aid economical logging and full utilization of material."

If the Maine Legislature adopts the rule recommended, the lumbermen and foresters say the State will be setting a standard rule that may be followed with profit by all the other States.

Canadian Wood in South Africa.

Imports of wood from Canada into South Africa amounted in value, according to the report of the Customs statistical bureau, to the following:

	1906	1907	1908
Wood and timber, unmanufactured, other than teak	£20,494	£21,460	£16,279
Wood and timber, other (planed and grooved) ..	7,903	9,000	4,940
Wood and timber, manufactured (houses, frames and parts thereof)	8,310	4,460	2,034
Wood and timber, manufactured (boxes empty) ..	532	122	275
Match making material	4,268	3,458	4,068
Staves	180	248	5
All other kinds, n.o.d., other than furniture ..	2,347	591	817
Total	£44,034	£39,339	£28,438

The King Lumber Company, of Cranbrook, B.C., whose timber limits cover 3,800 acres, containing upwards of 600,000,000 feet of timber, are now operating two sawmills, and one of the largest planing mills on the coast. The staff of 250 men is under the personal management of M. B. King. At Yahk, 41 miles west of Cranbrook, are located the company's largest sawmills, in the centre of their timber holdings. At this place they operate their own railroad, which runs to the international boundary. About 125 men are employed at this plant under the direction of Mr. Saddler. No. 2 mill is two miles west of Cranbrook. Whatever lumber is not shipped from this mill to the prairies is brought to the Cranbrook planing mill to be finished. The dry kiln has three miles of steam pipes, and has a capacity of 40,000 feet a day.

The work of surveying the timber reserves of Nova Scotia, which has been undertaken by Dr. B. E. Fernow, Dean of the faculty of Forestry of the University of Toronto, under the direction of Hon. Wm. T. Pipes, Attorney-General and Commissioner of Crown Lands for Nova Scotia, will take two summers to complete. Dr. Fernow and his assistants will commence the work at once. The work will be done by counties and a forest map of the province will be prepared.

THE BRITISH COLUMBIA TRADE

Unsatisfactory Trade Conditions Still Prevail.

Vancouver, June 22.—Prices of lumber in British Columbia are still very unsatisfactory, particularly in the lower grades, and this in spite of the fact that mills are busy, and building operations are heavy. Manufacturers are working at cross purposes so far as prices are concerned and the result is that a great deal of rough lumber is sacrificed by those who are in need of money. A case is known where 1,000,000 feet were sacrificed at \$5 a thousand, and several million feet of lumber have been sold at \$9 to \$10 per thousand. These figures are below the actual cost, however, and cannot be considered as affording any means of estimating the prevailing prices. A large part of the lumber is being sent to the prairies and is selling for \$14, which permits of a small profit at the present prices of logs.

The uncertainty of the tariff situation has resulted in quite a falling off in business and the closing down of a number of mills. So far as one can judge from outside appearances and the effects on the market, many of the mills of the United States are curtailing their output. Had this not been the case it was expected that the dull condition of trade on the other side would have resulted in a great quantity of rough lumber being sent into Canada to be slaughtered.

Shingles showed little change during June. They are selling at \$1.85 to \$1.90 in British Columbia, which permits of a profit. The product is going almost exclusively to the prairie provinces. In the United States the shingle situation is reported to be very bad and Canadians are not trying to make sales there.

The standing timber business is experiencing quite a lull. Since doubt regarding the tariff outcome became general, enquiries from United States investors have been much less frequent.

Logs are being put in the water so rapidly that a glut in the market is more than likely. The situation is being aggravated by the shipment of United States logs into Canada, which increases the competition. The cost of getting out fir logs so far as labor and provisions are concerned is said to be much less in the Puget Sound than in British Columbia. Cedar logs in very small numbers have been disposed of in the United States.

In December last it was stated frequently that there was enough logs and lumber in stock in the Kootenays and on the British Columbia coast to last for several months. During the five months of 1909 the log cut on the coast alone has been 173,916,219 feet, which is about one-eighth of the cut of the whole province. This is a large increase as compared with the same five months of 1908. The comparison for the two years by months is as follows:

	1908	1909
January	28,791,559	16,179,114
February	19,514,071	19,793,851
March	17,515,121	35,073,693
April	24,369,700	52,869,561
May	30,385,779	50,000,000
	120,576,230	173,916,219
		120,576,230
Increase of 1909 over 1908		53,339,989

An increased demand for lumber from the prairies has distinctly improved the situation in the Kootenays, according to Mr. W. A. Anstie, secretary of the Mountain Mills Lumbermen's Association. Mr. Anstie reports that stocks have been reduced between fifty and sixty million feet since last January. Ninety per cent. of the sawmills in the interior are now in operation.

A recent despatch from Seattle indicates a revival of buying in the lumber industry. The statement is made that specifications for lumber orders aggregating more than twelve million feet have been received by local dealers from car manufacturers in Chicago, St. Louis and Milwaukee. This, if true, will involve the transfer westward of nearly half a million of Eastern money, which would help materially to relieve the tension now prevailing in Washington lumber circles.

A Spokane despatch says: "Never in past years have lumber prices reached a lower average. Lumber can be bought from \$5 to \$7 cheaper now than at any time in years. The overstocked market and slack times have resulted in curtailment of mill development from 25 to 40 per cent. in large mills, and in many instances cutting in the woods has been stopped and logs secured from outsiders, the companies declining to sacrifice their own lumber."

A Puget Sound correspondent states that the bottom of the shingle market over there has fallen out. In spite of the fact that there is no profit on shingles at the prices quoted on the coast, 90 per cent. of the mills are operating, though a number of them are not running full capacity.

Mr. W. I. Paterson's Experiences Abroad.

Mr. W. I. Paterson, of the Paterson Lumber Company, who has just returned from a trip to Europe has spent much of his time abroad in the investigation of the matter of utilizing mill refuse. During his travels Mr. Paterson visited Germany, Sweden and Great Britain. He found that in the old country there was no waste whatever in the mills, as the sawdust was used for fuel. The small ends of lumber were used for pulp and small wares. Nothing was thrown away.

Mr. Paterson visited many of the larger factories in Scotland, England and Germany where gas engines are used, and told the manufacturers of the invention by Mr. Thomas, of Vancouver, of a method whereby mill refuse and sawdust can be used for the production of gas. He was not greeted with much credulity on this point and was told that in practically all cases where this had been tried it had been found to be impractical on account of the unwieldy size of the burner which was necessary and the unsatisfactory nature of the engines. Mr. Paterson, however, is enthusiastically interested in the Thomas invention and intends to investigate the subject thoroughly.

The matter of shipping Douglas fir to England was also investigated by Mr. Paterson, and he found that it was an impossibility to compete with the wood products of Germany and Sweden where re-forestry had been so well developed that the British Isles took most of their lumber from them. A large pile of Oregon pine which he saw had been offered for sale, he was told by the dealer, at much less than it had cost him to lay it down, yet no sale had resulted, although the pine was for ship planking, of which there had been a great scarcity for some time.

In connection with Mr. Paterson's experience it is interesting to note that some people still have hopes of selling ship timber in England. Matthew Macdougall, of Vancouver, has opened up a new line of export from British Columbia to the United Kingdom in lumber for decking vessels. It will be sent via the Tehuantepec route to the firm of Alexander Macdougall & Company, Glasgow, in the form of large timbers shipped in sailing vessels. The experiment will be watched with interest, for the proximity of supplies in Russia and the Baltic timber countries has precluded British Columbia from attempting to compete with this class of lumber hitherto.

Tehuantepec Traffic Increasing.

Trade between British Columbia and Europe has been developing rapidly for some months past by way of the Tehuantepec route across the isthmus of Panama. Shippers who made use of this route from the first reaped good profits over those who continued using the old routes. Now that the advantages have become generally known, a large volume of trade will doubtless be sent by the new route. Mr. E. H. Munday, general manager of the Tehuantepec Railroad visited Vancouver recently, his main object being to make arrangements for the handling of this rapidly increasing traffic. Mr. Munday stated in an interview that the Harrison and Leyland steamship lines will immediately make provision for improvements in their service across the Atlantic. Since April 3 nearly a dozen steamers from Liverpool and London, Havre, Antwerp, Hamburg, and other European points have landed cargoes at Puerto, Mexico, which have been carried across the isthmus by the railway and trans-shipped at Salina Cruz into Canadian-Mexican vessels, the Lonsdale and the Georgia, and the Jobson line vessels, Ella and Erna. A proof of the growth of trade by the new route is afforded by the arrival in port recently of the Georgia with 1,300 tons of European freight for Vancouver merchants.

Oregon and Washington Association Forms Traffic Bureau.

The Oregon-Washington Lumber Manufacturers' Association have created a department to be known as the traffic bureau, in connection with the association work. The object of this bureau will be to take up all matters relating to transportation. The initial work undertaken will be along the line of collection of claims for the members. A charge of 7½ per cent. on the amount collected will be imposed to help in defraying the expenses of this department. At first it is not expected that the collection returns will be adequate to support the traffic bureau, and proper provisions have been made to take care of the balance of the attendant expense.

Several of the largest mills in Oregon have recently employed a claim expert to go over their expense bills, which had been filed away, taking it for granted that there was no refund due on account of freight paid, or the claims were considered uncollectable. Much to the surprise of these mills, an expert has succeeded in refunding to them quite a handsome sum in each case. The result of this investigating showed the necessity of a bureau where all freight bills could be carefully scrutinized by an expert before they are placed in the dead files, where prior objection to a refund had been made by the railroad.

It is the intention as soon as the claim department is well under

way to take up and investigate the matter of railroad weights and endeavor to co-operate with the millmen and railway companies in securing accurate and reliable weights on shipments.

Timber Licenses Bring Large Revenues.

A. E. Smith, U. S. consul at Victoria, B.C., in a recent report to his Government, says: "One of the most noteworthy events of the recent session of the Legislature of British Columbia was the announcement of the Finance Minister that at the close of the fiscal year 1908 the assets of the province were \$5,979,055, against an expenditure of \$4,541,278, showing a surplus, the first in its history, of \$1,437,777; also, that during the year \$686,000 had been paid for redemption of bonds of the province, not due, and \$168,927 paid into sinking funds. As a consequence, large amounts were voted for construction of bridges, public buildings, roads and trails, etc., throughout the province. It may be stated that much of the increase in the revenue was due to the sale of timber licenses and royalties to American capitalists, and perhaps one of the most important results of the meeting of the Legislature was the announcement by the Premier that next year the Government will pass a law making the timber licenses of the province (in which Americans have invested millions) perpetual, under certain restrictions, instead of expiring in 21 years, as at present. This is very important, as it means a large increase in the value of all timber licenses issued. There is no doubt of the passage of such a law when introduced by the Government."

The Kootenay River on the Rampage.

During the month of June numerous reports were received of the serious losses resulting from high water in the Kootenays. A unique sight never witnessed in Kootenay before was the floating of millions of feet of logs down the Kootenay river, due to the breaking of several booms above Gateway, B.C., where the winter's cutting of timber was sorted. Some, of course, will be recovered, but the saving will be small compared to the loss. Kootenay lake is covered with logs washed down from all parts of the country. The Patrick Lumber Company, on the Slocan river, lost some thousands of logs, but the greatest sufferer was the Bonners Ferry Lumber Company, from whose booms some three million feet of logs escaped. Over 20,000,000 feet of stray timber passed Bonner's Ferry in one week; 3,000,000 feet got away at Libby in one night, and six million feet swung loose at Wardner, B.C., in one night. The timber passing Bonner's Ferry averaged a million feet an hour for fifteen hours.

Warm rains and hot sun have caused floods in the rivers in the neighborhood of Cranbrook, B.C. The St. Mary's river rose very rapidly recently and fears were entertained for the safety of the large number of logs taken out of the Skookumchuck by the C.P.R., if the Kootenay continued to rise. Pugh & Livingstone and the Ross-Saskatoon Lumber Company were also reported to have large numbers of logs in danger. On the Elk river many logs have been lost, as it was impossible to hold them with the booms, owing to the high water and the strong current. The Forster Lumber Company, the Fernie Lumber Company, and the Elk River Lumber Company were the chief losers. The Moyie river also rose rapidly, and one of the East Kootenay Lumber Company's dams was reported to have given away, without damage, however, to their property at Ryan. The King Lumber Company's mill at Yahk was forced to close down on account of high water.

A Contemporary's Inaccuracy.

Everything is grist that goes to some mills. In the language of journalism, this would read as follows: "Everything of interest makes good copy, even if not authentic." This is well exemplified by the use made by the "American Lumberman" of a newspaper report regarding the arrival of the Japanese fleet at Vancouver. The report stated that because the Japanese workers in the sawmills took a holiday for the event, most of the mills were obliged to shut down. The inference was that the mills were largely manned by Japanese. The "American Lumberman" uses this story as an argument against any lowering of the tariff on lumber and gives it prominence at the head of its first editorial column. As a matter of fact, few mills were affected. At these mills the Japs asked for a holiday and it was granted.

Timber Land too Valuable for Agriculture.

When President Stone, of the Vancouver Board of Trade, took his seat officially, he made a strong plea for the agriculture of the provinces. The "News Advertiser," of Vancouver, in referring to this speech, states that the province must make agricultural development a comparatively slow process, as large portions of the public lands are more valuable for timber purposes. Millions of acres in the coast district and around the waterways in the interior are covered with dense forests of timber and forbid more than a small amount of agricultural development being achieved during the present generation. Nor from any economic point of view could the destruction of these forests be justified in order to make agricultural development possible. While a portion of these tracts will

be gradually cleared of the timber, and brought under cultivation, any wholesale denudation of the forest with that object in view would be wasteful destruction of a natural wealth, the value of which is steadily increasing with the disappearance of the forests in other countries, and the growing demand for timber all over the world. One of the most important duties devolving upon the Government is that connected with the management of the forests, so that they may continue to be a regular source of revenue and provide the raw material for one of the most important provincial industries.

Personal Mention.

Mr. W. E. Simpson, president of the North American Timber Company, of St. Paul, Minn., visited Vancouver recently. The North American Timber Company owns some 250 timber limits in British Columbia, and is on the lookout for more.

Mr. G. Saunders, sales manager for the Columbia Lumber Company, at Golden, B.C., visited Vancouver recently. The Columbia Lumber Company own over 900 acres of timber limits, the largest area in the province controlled by one corporation, and the mill is the largest plant in the interior.

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, Ottawa, Ont., called at the Vancouver offices of the "Canada Lumberman" on June 15th. Mr. Hawkins' trip to the West was a business one, and extended as far as Victoria. He intends to return later in the season and spend several weeks in the West.

Mr. P. G. Sills, manager of the Western Lumber Company, with offices in the Molson's Bank building, Vancouver, nearly eclipsed his best record for the amount of eastern business handled last month. He shipped 46 cars, and would have exceeded this figure if the stock had been available. This firm carry an advertisement in the "Canada Lumberman," which no doubt accounts for the many orders coming their way.

Interesting B. C. Short Lengths

The steamer Queen City, back from one of her up-coast trips, has brought word to Vancouver that there is great activity among the logging camps all along the British Columbia coast, every one of them working at its full capacity.

Several of the Vancouver Hoo-Hoo will attend the Concatenation to be held at Edmonton (where extensive onion beds are to be found) on the evening of June 30th. A number of eligible but inexperienced young kittens will be let loose in the greenery, and much sport is expected.

Mr. A. K. Godfrey, of Winnipeg, president of the Western Retail Lumbermen's Association, recently surprised the British Columbia lumber and shingle manufacturers by claiming that they were selling their lumber direct to farmers on the prairies. He declared that tenders for bids on an extensive order submitted by an alleged farmer near Moose Jaw had elicited replies from no less than 26 coast mills. Mr. Godfrey added that this was one of the many cases of alleged unfair dealing his association had in its possession.

A new freight rate for lumber has been agreed upon by members of the Transpacific Tariff Bureau, consisting of the principal steamship lines operating regularly from the North Pacific to the Orient. The rate is lowered somewhat, and large and small shipments are placed on a more equal footing. For shipping lumber from the North Pacific to Hong Kong, Shanghai and Japanese ports, the new rate is reduced from \$9 to \$7 per thousand on lumber up to 40 feet in length. On lumber between 40 and 50 feet the rate is \$8, and over 50, \$9. It is stated that a rate as low as \$7 was frequently granted for shipments larger than 400,000 feet. This was a handicap to the smaller shipper. Under the new rate it is believed all shippers will be able to compete on an equal footing.

The Yale Columbia Lumber Company, of Nelson, B.C., has about seven million feet of logs in its drive on the Kettle river which at last report was not far from the company's mill at Cascade. The Danville Lumber Company's cut for the season is estimated at about three million feet. Both of these companies have made their cut this season on the west fork of the river, while on the north fork, Robinson & Lequime have cut and now have in Smelter lake, above the Granby smelter at their mill there, over five million feet of timber. This latter company has a five-year contract with the Canadian Pacific Railway for all the tie timber they can take out, which this season so far will amount to about seventy-five thousand ties. The company will, at the end of the month, put another crew in the bush for the purpose of cutting more ties during the summer months.

During the fiscal year 1907-8 the Colony of the Bahamas imported 1,142,124 feet of lumber, valued at £6,564. The imports of shingles amounted in number to 1,193,650, valued at £1,218.

English and Canadian Sawmill Methods

What a Visitor to the Old Country Will Note—Handling Appliances are Primitive—Machinery of Forty Years Ago—Small Mills are Multiplying Since Introduction of Electric Motor

BY W. J. BLACKMUR

The difference between English and Canadian sawmills is at once apparent to a Canadian visitor in England. He feels that he is in a land where sawing is yet in its infancy, until he begins to realize that other conditions and qualities alter the aspect of the case. He will perhaps visit the Surrey Commercial Docks, one of the sights of London, and yet unknown to 90 per cent. of Londoners. There he will find an enormous quantity of timber, the greater part from the north of Europe. He will see mile after mile of sawn timber, squarely and smoothly sawn, and all piled up carefully. The greater part is what is commonly known as yellow deal or red fir, a wood that is easy to saw and to plane. Here and there will be a pile of Canadian spruce or pine. It would appear from the size of the timber that it will require very little sawing, until it is understood in what way it is to be used.

In the Surrey Commercial Docks, logs are conspicuous by their absence. A few of hard wood may be found in a shed set aside for them, and a number lie in one of the ponds to keep them from cracking. Throughout the docks, the timber is principally sawn stuff, from $\frac{1}{4} \times 1$ to 3×11 inches, with the exception of Oregon and Canadian pine, the former running very wide and very long. The London mills have been built especially to resaw this timber for the requirements of local customers. On the north side of the Thames are docks containing the logs. However, the number of logs is not so large as one would suppose, considering the manufacturing requirements of a great city like London. The timber coming to England consists of soft woods, principally grown in eastern and northern Europe.

Primitive Machinery for Handling.

In the Surrey Docks, although the number of pieces entering run into millions, there is no machinery for handling the stuff. In the docks of the Millwall Dock Company, one of the competitors of the Surrey Dock Company for the timber trade, there is an arrangement called a transporter for carrying the timber from one side of the dock to the other, but to a Canadian it would seem a cumbersome method of handling. It is simply a series of live rolls set high on a staying, with various landing places to allow egress or ingress to the rolls. It will be seen, therefore, that the companies that have the handling of the greater part of the timber which enters London do not make any special arrangement for handling it in an efficient and speedy manner.

This being the only provision where all the timber is handled, it can scarcely be expected that the London mills will be completely equipped to handle smaller quantities. In some mills that cut logs there is a traveller or crane, to take the timber from the yard to the machine, but there is not a mill yet heard of in London that has a steam nigger. Indeed, the handling of the logs is so different to the Canadian method that the steam nigger would be out of place. The logs are not rolled on to the carriage, but are picked up by crane or block and fall, and are gently placed in position, and this is done so leisurely that it would seem that there was an eternity of time in which to cut the log. The work is not done with the expedition of the Canadian workman, who nearly always is trying to beat his previous best record.

The smaller sawn wood is carried on men's backs or shoulders. A few mills have rails and trucks, but these are mills which are run to make special products, not purposely for sawing. The sawn wood thus carried may be a $24' 3" \times 11"$ or $12' 3" \times 9"$, but as the load is about 200 pounds and the men are specially trained in carrying these deals it would seem that they have created a monopoly which nothing can alter. The great saving that could be made by having rails and trucks would seem apparent to any man with business capacity. Imagine a gang of men carrying these deals over one-third of a mile from the yard to the mill every working hour of the day. One would suppose that if it was only from a humanitarian point of view, the firm would order a set of trucks and lay down a system of rails to carry their wood into the mill.

It may be that this point of view is not presented to them at all in the periodicals they read, or it may be that they are so contented with the mill which was a good paying one when their fathers were alive, that they do not trouble about making any innovations which would mean the outlay of money. Whatever may be the cause, the fact remains that a Canadian cannot fail to be struck with the great waste of human labor in handling the timber, and the apparent lack of knowledge, and of mechanical appliances, possessed by the average Britisher. There should be a big trade for the timber truck manufacturers if they could only present the matter in the right way to sawmill owners in England.

As has been pointed out, the mills are mostly engaged in resawing. The greater part of the wood to be resawn is $3" \times 11"$ Canadian pine,

$3" \times 9"$ spruce, and a great deal of fir, into flatting for carcassing and mouldings, and the mills are fitted with machinery according to the class of wood they have to saw.

The Spruce Sawing Mills.

In the south of London, close to the docks, may be found a great number of mills which are engaged in sawing spruce for the trade. These mills are equipped with deal frame reciprocating machines of varying values for sawing purposes. This may seem a strange statement, yet it is a true one, for there are machines at work which were at work forty years ago, and with one-fourth the sawing capacity of others which have been erected within the last ten years. It is not strange that English sawmill engineers wonder when the sawmillers are going to scrap their old iron. Some of the new saw frames do excellent work but the old ones, although they do exact work, take an enormous amount of power for the work effected. The mills, however, in many cases are used to cut to the requirements of the customers. That is, the owner is a timber merchant as well as a sawmiller, and the income of the firm does not depend on the sawing. A few saw benches may be seen in the mill, but these are employed in cross cutting for thin work, and for cutting very thick stuff. The major part of the sawing is done by the frame saws, these cutting the boards to exact sizes and very smoothly, considering the cross-grained stuff they, at times, have to saw.

The trade mills around the docks depend largely upon circular saw work for their income. A number of suburban timber merchants who have to deliver wood to various customers after it has been sawn (perhaps the stuff may want one cut in it), will send the load to the mill, where it will be sawn in a few moments and repacked upon the van. Some of the mills which depend on this work for their support have not even arranged their machinery to the best advantage, and the load has to be carried in and out of the mill, and a large amount of unnecessary time is spent in carrying the timber to and from the saw.

These trade mills in some cases have extensive piling grounds, and are equipped with a number of reciprocating sawing machines. Their work consists of resawing spruce and pine plank which they take over the ship's sides and pile in their grounds until the timber merchant who owns this timber sells it to a customer, who has to have it sawn at this mill or to pay mill charges. This is an advantage to the timber merchant, to his customer and to the saw miller, who, by having a good stock of timber stored in his piling ground, can depend on a good run of sawing. These mills are equipped principally for thin sawing, a number having thin reciprocating saws and ground off circular saws. The latter is a variation of the swage saw but instead of the ground side being in a straight line it is scooped out to produce a long thin edge.

Cabinet Making Conditions.

In the east end of London the mills are arranged expressly to meet the requirements of the cabinet trade. They form a class entirely by themselves. The larger ones have a vertical log frame for cutting logs, principally birch, mahogany and walnut. They also do a great deal of good work with the ground saw, cutting up wide planks of mahogany and other hardwood from 12 to 18 inches wide. Only a few have a reciprocating saw for deals, these cutting third and fourth quality pine for the carcassing of the cabinet-making work.

A great number of the mills are very small concerns and are placed in unlikely places, especially since the introduction of the electric motor. Some are in cellars and private houses. Indeed, in the east end of London no place seems to be sacred to the small saw miller. Many of the mills are so sublet that there may be as many as thirty to forty different machines in one place, and rented by the same number of tenants. Of late years Jewish aliens have ousted the British cabinet-makers in this industry. The mills also are being run by them more or less satisfactorily. These mills contain band saws for small work and shaper work. The others are fret saws, circulars, planers and lathes. The turners in the east end of London have produced one of the worst paid trades in the woodworking industries, by adopting the system of each being his own master.

The Simonds Manufacturing Company, Fitchburg, Mass., have published an attractive booklet descriptive of "Simonds inserted tooth saws." This is their latest publication in the booklet line, and is a credit to the company. The saws referred to are interestingly illustrated and the descriptions accompanying the illustrations give a great deal of valuable information to saw users.

Senator Aldrich Strikes Back at Quebec.

Senator Aldrich has submitted in the United States Senate an amendment to the tariff provision relating to pulpwood. The proviso is as follows, the words in parenthesis having been inserted by the Finance Committee since the proviso was originally reported:

"And provided further, that in case any such country, dependency, province, or subdivision thereof shall forbid directly or indirectly the exportation (to the United States) of any wood pulp, logs or wood for use in the manufacture of wood pulp (and the President shall be of the opinion that such prohibition unduly discriminates against the United States, and shall issue a proclamation to that effect thereupon and thereafter) an additional duty equal to the rates of duty imposed by this paragraph upon wood pulp shall be imposed on any wood pulp imported from such country or dependency."

Trade Improving in East and West.

Mr. Fred S. Morse, treasurer of the Nepisiguit Lumber Company, of Bathurst, N.B., reports that the company's shingle mill at Bathurst is running along nicely and that this spring they put on an addition which increases the output by 50 per cent. Since they started, a year ago, they have kept their product sold right up to the saw, and they ran practically all winter. The demand in the States, Mr. Morse says, is very sluggish, not alone on shingles but on all kinds of lumber. They hardly think that it will be very much better for the next month or two, but anticipate that there will be some better showing of trade in the fall.

An Edmonton correspondent reports upon trade conditions as follows: "Practically no changes are shown in the western market conditions during the past week. With the stiffening of the Eastern pine markets, making the advance of all stock 50c. per M., one can foresee a similar feeling among the mills and manufacturers of the West. That there will be a realization of this is a hope many of the retailers of the prairie provinces would like to see realized. That there will soon come a return of a period of even basis of prices, though it be on a higher level, is, I believe, the wish of every retailer as well as manufacturer."

"The public press makes note of all these conditions and changes, whether up or down, and exercises an effect that is felt in almost every town and village where merchandizing is carried on. It is a peculiar condition, when you come to think it over, but the seller of lumber, the sales of which usually run to larger figures than most other business transactions in the average town, will note that the larger percentage of purchasers generally have some recent "press" comment at their tongue's end, which they can construe to meet their practical needs in bringing before the seller some reason why he is asking too much for the particular purchase he is about to make."

Miscellaneous News from Various Points

Eight mills in Aberdeen, Wash., are closed and 35,000 men are thrown out of work owing to a strike in the mill yards.

The first cigar-shaped log raft to leave Oregon this season passed out of the Columbia river recently for San Francisco, in tow of the steamer G. W. Fessenden. The raft contained one million feet.

On June 14th Captain McPhaiden, shipmaster of the port of Vancouver, died in his 81st year. He had been a resident of British Columbia for 35 years, and was appointed shipping master in 1896.

During the fiscal year ending March 31, 1909, twenty portable saw or planing mills were imported into Canada, which were valued at \$18,759. There were saws imported to the value of \$73,058.

A fire back of Calais, N.B., chiefly on timber land belonging to the Hon. G. M. Hanson, burned over 1,600 acres in Baring, 3,000 in Calais and 1,000 in Robinston, and is reported entering the township of Charlotte.

The Hoo-Hoo house at the Alaska-Yukon-Pacific Exposition, Seattle, made an excellent beginning, by being the scene of the wedding of Mr. Sydney D. Lagniel Smith, sales manager of the Vancouver Lumber Company, Vancouver, B.C., and Miss Birdie C. Ashtrom, of Seattle.

Announcement is made by President McLean, of the University of Idaho, at Moscow, that a four years' course in practical forestry has been arranged. In addition there will be conducted during three months of each winter a rangers' school. The university has just closed negotiations for 640 acres of timbered land on Lake Coeur d'Alene, near Harrison, Idaho.

The wholesale Canadian lumber house of Bartram & Saxe, Bible House, Astor Place, New York, has been merged with Bartram Bros., Limited, large manufacturers and wholesalers of Ottawa, Can. and will hereafter be conducted under that style. Edward T. Saxe will be president of Bartram Bros., Limited, as well as the resident manager for the

firm in the New York market, with headquarters in the Bible House. W. P. Bartram will make his headquarters at the manufacturing and shipping end at Ottawa.

Large quantities of lumber and many sawmills have been destroyed by forest fires in Bonaventure County, Quebec. The fire was started by a settler, burning rubbish. Among the mills destroyed are those owned by Messrs. Starrack, of New Richmond; Delva, of Irishtown; Barty Briere, of St. Godfroy, and Cure Duret, of Paspébiac. The heaviest losses of lumber were sustained by James Day, William Henry, Tracadie Lumber Company and Elzear Bourdages. The firm of Leclair & Daigle lost heavily, the exact amount not being yet known. The Tracadie lumber mill were also destroyed, while the Edwards and McLaren lumber companies lost a certain amount of lumber. One of the fires in the Nomingue district covered an area 20 miles in extent. Some of the settlers' homes have been burned and others are in grave danger. It is the most disastrous fire that has even visited this district.

United States exports of wood to Canada for the eleven months ending with November, 1906, 1907 and 1908 were as follows:

	1906	1907	1908
Manufactures of wood	\$1,402,378	\$ 1,387	\$1,186,986
Lumber	2,838,140	5,641,105	2,729,933

The lumber and shingle manufacturers, as well as all other public bodies, are strongly memorializing the Government at Ottawa against taxing insurance companies doing business in British Columbia who are not operating under a British Columbia charter. Foreign companies have been reducing the rate of insurance in this province, and manufacturers want them protected, instead of taxed.

It is understood that a national convention for the purpose of considering the preservation of Canada's natural resources will shortly be called by the Premier, Sir Wilfrid Laurier. The gathering will likely be held this fall in Montreal. The Canadian Forestry Association expects to hold a summer meeting in Regina, Sask., and the next annual convention will take place in Fredericton, N.B., in March, 1910.

Conditions Encouraging at Winnipeg.

The Rat Portage Lumber Company, Limited, Winnipeg, under date of June 22, write as follows:

"With reference to current trade conditions in Winnipeg, there is a very large amount of building being done at present, and the demand for lumber is quite heavy. While the price is not as yet exactly satisfactory, still, we think that should the present demand keep up for any length of time, prices will be bound to stiffen, and we do not anticipate that there will be any trouble in getting full list price for our entire output."

"Conditions throughout the country have been somewhat slow during the past six weeks, but with the excellent crop prospects we find that during the past week or ten days the demand has increased considerably, and that the country retail yards are now beginning to dispose of a large amount of lumber. While the most of them have pretty fair stocks on hand any sort of a demand will speedily break them up, and we anticipate a very much improved market from this out. There is a very considerable amount of elevator building being done, which, along with the increased business during the past fortnight, has improved the conditions a great deal."

"We may say that at the present time we are doing practically a normal business for the season of the year."

Canadian Shingles are the Best.

Imitation is the sincerest flattery, and the shingle manufacturers of British Columbia will therefore be interested in the following from the "Mississippi Valley Lumberman": "Shingle manufacturers of the Pacific Northwest are reported to be already feeling the benefits of the movement for the improvement in the manufacture of shingles. Canadian shingles have admittedly been of better quality than those manufactured on this side of the line. One reason for this has been that the cost of timber was so very much lower there, and the manner in which it is secured from the government is so much more advantageous for the manufacturer, that the cost of putting a good shingle on the market has been low enough to give the British Columbia mill men a profit even after paying the shingle duty into this country. The movement for the improvement of our own shingles has, however, gained such momentum that buyers are now content to take American shingles, especially since they can get them for less money than they have been paying the manufacturers across the line."

H. C. Nicholls has sold his interest in 100,000 acres of timber in the Cariboo country to J. M. Kellie, of Revelstoke.

Charles F. Heidrick, of Clarion, Pennsylvania, president of the Pittsburg, Summerville & Clarion Railway, has bought 9,000 acres of timber, 7,000 being on North Valdez Island and 2,000 on the Fraser river, about 75 miles east of Vancouver and adjoining the main line of the C.P.R. He paid \$110,000. The vendors were George Martin, the McLaughlin Lumber Company, D. J. O'Brien and the Gulf Lumber Company, all of Vancouver.

CAMP DEPARTMENT

The Evolution of the Lumber Camp.

Counted by the present day standard, logging camps — the woods homes of the hardy fellows of the forests—have been a matter of evolution. The original logging camp, as one understands the term to-day, was established among the pine woods of Maine. One, or sometimes two, log-high enclosures represented the first-above-ground section of this type of camp. From each side spruce poles were projected in the form of rafters to a meeting with each other sixteen to twenty feet in the air. Cross poles were laid across these rafters and fastened by means of strips of bark. On top of this network were placed spruce or hemlock boughs, with their tops turned downward, which formed an effective shield against snow and a passable one against rain. A large opening was left in both gables, the doors being low and wide, and of sufficient size to admit the hauling in of logs which were used for a great fire that invariably burned in the centre of the camp house. These logs were drawn into the structure by a pair of woods horses and banked up into a veritable bonfire, the smoke escaping through a convenient opening left in the centre of the roof. In the coals resulting from this great log fire were baked the beans, pork and bread. Here the coffee was boiled, and camp eating partook entirely of a very crude picnic affair. The bill of fare was not extensive, but the food, while coarse, was wholesome.

Lengthwise, on either side of the big camp structure, were the bunks, which were equally primitive to the other accessories of camp life. Poles supported from off the ground the spruce boughs that constituted the mattress. This "field bed," as it was called, extended the entire length of both sides of the structure. At the top of the boughs, blankets were sewed together of a length sufficient to reach and cover the spruce boughs. This was the undersheet of the early Maine woodsmen. The upper sheet was an exact counterpart. The pillows—well, for pillows—it was the woodsman's dunnage bag—his "turkey"—a pair of boots, an old saddle or whatever else he could roll up to support his head. The enviable sleeping place in this field bed was near the centre of the row, since it was opposite the fire. The unlucky drew the end of the line, in which position he was often left without any covering, and where he was nearer the realm of Jack Frost outside. The men slept spoon-fashion, and when one turned over the entire line had to do likewise. This in verity was the primitive camp. In not dissimilar structures were housed the horses employed in the logging.

From this crude beginning began the erection of logging camps, in which it was deemed expedient to raise the log portion of the structure to a sufficient height to accommodate a man standing, and it was also found necessary to make smaller and more numerous structures. The bunk house was created, crude fireplaces were put in, which afterwards gave place to the great cast iron stoves which were fed with long lengths of cordwood. Separate cook houses with crude dining-rooms, with kitchen at one end of the building, were built, but the horses had a log barn. The field bed in the camp house gave place to rows of bunks two or three tiers high, in which two men only slept together, and in which straw mattresses took the place of spruce boughs, but blankets, without sheets or pillows, prevailed until within a very few years.

The log shanty gave place, where lumber was available, to camp buildings being made of two thicknesses of cull boards set on end, nailed together, with roof overhead, and, as the camp shanty structure improved, a layer of tar paper was placed between these two thicknesses, which kept out the biting blasts of winter. By this time a few windows were cut into camp houses, to afford feeble light to the inmates.

To-day the modern set of camp buildings are more comfortable than the average hotel in a country town. They are kept clean and sanitary. The lumberjack even has clothes washed at frequent intervals, and sleeps between sheets, and while the covering is a seven-pound army blanket, this also is kept clean. He also has pillows to rest his head on. Oftentimes, in place of the crude wooden bunks, two or three-deck iron beds, set about in regular lines in the camp house, are used. These structures are warm and comfortable. The food has immeasurably been improved and it has reached a point where modern logging operators cannot keep their help on the job unless they have not only the well-cooked substantial of life, but also many of the delicacies as well. Fresh meat and vegetables are to-day employed to feed the labor in nearly every modern logging operation. Many operators build portable camps, mounted on logging trucks, or semi-portable houses, which can be taken down and moved farther into the depths of the forest.

Lumber camp life in the old days represented long months outside the pale of civilization, hard work, strenuous life, coarse fare and much profanity. To-day the husky woodsman has about all the luxuries of life that can be obtained in the best country village in the land. He does not have unreasonable hours of labor; he has the best of food, often cooked by an expert, whose pay envelope contains one hundred dollars a

month; he sleeps in good and clean beds, and his life is not as serious an affair as is generally considered.

This picture of modern camp life may perhaps reflect the conditions prevailing in the North more particularly than it does in the generality of the South country, but camp life is improving everywhere. The old life of filth, fire-water and fighting has given way to wholesome cleanliness, intelligence and decency.

Lumbering Methods in New Zealand.

Lumbering operations in New Zealand are far different from those in vogue in this country. The New Zealand logger speaks of the "cat, pan and jack." The first stands for the catamaran, which is something similar to the humdurgin used in America. The pan is something peculiar to New Zealand; it is generally a piece of boiler plate about 4x5 feet. The front corners are turned up, and it is used in the way of a sled under the front end of a log, and saves sniping it. On rough ground the log does not always stay in the pan. The jack is called the glory of the New Zealand bushman. Who invented it is unknown. It is claimed to be the best logging tool in the world. The first loggers in New Zealand were sailors who came there for spars. The rope and tackle were used in logging in the early days before animals were invented. The native Maoris dragged out heavy timbers by their own exertions. The bullocks came in later, and even to-day it is a question argued frequently as to which is the better, bullocks or steam. It is considered, however, that the bullock will gradually be displaced by the donkey engine. In that country the donkey is called a steam hauler. The first one went to New Zealand about fifteen years ago. The number in use is constantly increasing. There are a number of different log haulers in use, more or less of the same type, with one, two, and three rates of speed for hauling in the logs, with steel cables running from a quarter of an inch to an inch in diameter, logs weighing fifteen tons are handled with ease. Logs are handled within a radius of twenty chains, though occasionally the radius is increased to sixty chains. An average day's work with one hauler and crew runs from 10,000 to 20,000 feet.

It makes one smile to read that the cost of trams is a heavy tax, often running from twelve cents to twenty-five cents per hundred feet; this is for the building. New Zealand is a rough, broken country, and laying out tramways requires considerable skill and experience. On the heavy grades a centre rail is laid, upon which a "clipper break" is used for stopping a load at any time on any grade. The axe and saw are used for felling. Sometimes six men work on one saw.

The timber industry in New Zealand is in very bad condition, alleged to be on account of the heavy shipments of lumber from the coast, manufactured, it is claimed, by cheap labor in British Columbia and carried in subsidized ships. The subsidy exists to the extent of \$50,000 a year, and is on the Alley Line, running between British Columbia and New Zealand. Of this amount of subsidy Canada and New Zealand pay an equal amount. It is alleged that the freight on lumber from British Columbia to New Zealand is only about six dollars per thousand. Several million feet of Douglas fir have arrived and it is claimed to have caused the local mills to shut down.

New Zealand is a country where the labor question is a national issue and the laboring man is a potent factor. It is claimed by the leaders that American lumber is produced by the cheapest labor, working ten hours a day, using modern machinery and with extensive areas of forest. This makes competition in New Zealand very serious. It would appear from the above facts that every country has its drawbacks.

Several Ontario and Quebec lumbermen were grievously disappointed over the eleventh-hour postponement of the sale of Indian lands timber limits, which was to have taken place at North Bay on Wednesday, June 16. They had journeyed to North Bay and made preparations to bid on the 163 lots in the townships of Pedley, Commanda and Beaucage, comprising a total of about 80 square miles, but upon arrival were informed that the Indian Department had ordered the sale to be cancelled. They were therefore out of pocket the price of their transportation and expenses, to say nothing of prospective profits upon intended investments. No explanation was given by the agent at North Bay.

An Eastern college graduate applied for work in a Michigan lumber camp. He was told to get busy on one end of a cross-saw, the other end being in charge of an old and experienced lumberman. At first all went well, but at the end of the second day the young man's strength began to wane. Suddenly the old man stopped the saw and spat.

"Sonny," he said, not unkindly, "I don't mind yer ridin' on this saw, but if it's jest the same to you I wish you'd keep yer feet off the ground."

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue

WANTED—LUMBER, ETC.

WANTED—TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. **SIMCOE WOOD AND LUMBER COMPANY,** 24 Adelaide Street West, Toronto. 11

Wanted

5 CARS OF GOOD COFFIN ELM FOR EXPORT. Apply Box 765, CANADA LUMBERMAN Toronto. 14

Wanted

HEMLOCK LUMBER, LATH, PINE AND spruce flooring. **CHELEW LUMBER CO.,** 74 Van Horne St., Toronto. 13

Wanted

ANY NUMBER UP TO 25 CARS 1" CULL Soft Elm. The **R. E. KINSMAN LUMBER CO.,** LIMITED, Hamilton, Ont. 13

Wanted

BASSWOOD AND BIRCH, 500,000 FT. 4/4 No. 1 common and better. State amount you have and lowest f.o.b. mill price. R-39, c/o CANADA LUMBERMAN, Toronto. 13

Wanted

1" Soft Elm, Coffin Stock
1 1/2", 2" and 3" Soft Elm, Mill Run
Hard Maple Axle Stock.
1" Basswood, Log Run, Dead Culls out
Box 786 CANADA LUMBERMAN, Toronto. 15

Lumber Wanted

SOFT ELM, ASH, BASSWOOD, OAK, Beech, Soft, Maple, Cherry, Chestnut, Hard Maple, and Birch, 1" to 3". Can use log run, dead culls out. State what you have of each kind, when sawn and lowest price. Box 793 CANADA LUMBERMAN, Toronto. 16

Wanted: White Pine Tank Lumber

3 x 6 and 8-18, and 3 x 10-24

Ontario Wind Engine & Pump Co.
Limited
TORONTO, ONTARIO 1

WE ARE OPEN TO PURCHASE THE FOLLOWING stock of the present Winter and Spring's cut:—

350,000 ft. 1" Basswood, log run dead culls out.
100,000 ft. 1" Soft Elm, common and better.
80,000 ft. 1 1/2" Soft Elm.

Also the following dry stock for immediate shipment:—

4 cars 1" Birch, No. 1 common.
4 cars 1" Birch, first and seconds.
3 cars 2" Birch, No. 1 common and No. 2 common.
3 cars 1" Basswood, log run dead culls out.

WANTED—EMPLOYMENT

Wanted

RELIABLE MAN, SIXTEEN YEARS' EX- perience, seeks position as mill foreman or sawyer. Box 794 CANADA LUMBERMAN, Toronto. 14

Wanted

COMPETENT RIGHT HAND BAND SAW- yer, having excellent references and experience seeks position. Apply Box 779, CANADA LUMBERMAN, Toronto. 16

Wanted

POSITION BY AN EXPERIENCED LUM- ber Buyer and Inspector. Box 764, CANADA LUMBERMAN, Toronto. 14

WANTED—EMPLOYEES

WANTED IMMEDIATELY LUMBER IN- spector Shipper, must understand car and boat shipping and able to look after from 25 to 30 million feet of Pine and Hemlock with small quantity of Hardwood. Apply stating salary expected, giving references and experience to Box 795, CANADA LUMBERMAN, Toronto. 14

BOOK - KEEPER AND STENOGRAPHER wanted; must be quick, accurate and good penman, and must have practical experience in retail lumber office where everything in building material is handled. Must be capable of taking full charge of books and willing to act as office salesman and work long hours. Apply at **McKINNON'S LUMBER, OFFICE** or write **M. McKINNON,** Box 337, Cobalt Ont. 11

BUSINESS OPPORTUNITIES

For Sale

A GOOD SAWMILL AND SITE ON LAKE Huron with over 1,000 acres of timber land; will be sold cheap to quick purchaser. Apply at once to **N. H. PETERSON,** Bruce Mines Ont. 13

MISCELLANEOUS

For Sale

ABOUT 40 ACRES OF GOOD TIMBER chiefly Hemlock, some Maple, Birch, Basswood and Elm. About 40 miles from Toronto and 4 miles from station. Address Box 15 Aurora, Ont. 13

For Sale

ONE COMPLETE SAWMILL ROTARY type, capacity 30,000 feet per day; 2 boilers; engine, 125 h.p., belts, etc. Apply to Box 52 Chapleau, Ont. 13

Sale of Valuable Timber Limits

Andrew MacCormack Estate and Other Interests

THE UNDERSIGNED ARE INSTRUCTED to sell by Public Auction en bloc, at the Russell House, Ottawa, on September 30, 1909, at 2.30 p.m. the following Timber Limits situate in Block A Upper Ottawa, Province of Quebec, viz:

Berth 676 Licence No. 580 of 1908-09, south half, Lot 16, Range 4, Block A, 25 square miles; Berth 677, Licence No. 581 of 1908-09, south half Lot 14, Range 3, Block A, 21 1/4 square miles; Berth 611, Licence No. 582 of 1908-09, Grand Lac Victoria, River Ottawa, 19 square miles; Berth 678, Licence No. 583 of 1908-09, south half of north half Lot 16, Range 4, Block A, 9 1/2 square miles; Berth 679, Licence No. 584 of 1908-09, north half Lot 16, Range 4, Block A, 15 1/2 square miles; Berth 680, Licence No. 585 of 1908-09, north half Lot 15, Range 3, Block A, 18 square miles; Berth 681, Licence No. 586 of 1908-09, south half Lot 17, Range 5, Block A, 25 square miles; Berth 682, Licence No. 587 of 1908-09, north half Lot 16, Range 5, Block A, 25 square miles; Berth 696, Licence No. 588 of 1908-09, north half Lot 17, Range 4, Block A, 25 square miles.
Total 183 1/4 square miles.

These limits are all surveyed and are easy of access by a good roadway from Ville Marie to their location. They comprise some of the best pine and pulp wood areas in the Province.

The Trustee reserves the right if the Reserve Bid is not reached, to offer the berths separately. Terms—10 per cent. of the purchase money to be paid down at the time of sale, and the balance in equal instalments at one (1), three (3) and six (6) months thereafter with interest at the rate of 5 per cent. per annum.

For further particulars and conditions of sale apply to the Royal Trust Company (Ottawa Branch), and to Code & Burritt, Solicitors, Carleton Chambers, Ottawa.

Dated this 31st day of March, 1909.

THE ROYAL TRUST CO., Ottawa,
Trustees of Sale. 18

Scrub Pine.

While there is a considerable amount of scrub or Jersey wood standing as timber, it has heretofore been used only in a very desultory fashion, and then mostly as fuel, says the Forest Service. About 500,000 acres, or 20 per cent. of the wooded areas of Maryland, and about 130,000 acres, or 10 per cent. of that of Virginia, is covered with fairly dense stands, while the broad range of tree extends along the Atlantic seaboard from southern New York to South Carolina and back over the Appalachians of Central Indiana, where its largest specimens are found.

While a number of mills have used scrub pine for the manufacture of soda pulp and ground wood, no plans have ever operated the sulphite process. Scrub pine might have been used to good advantage long ago, but for the fact that it did not seem to the practical paper maker even worthy of trial. By only slight changes of the regular cooking treatment which is ordinarily accorded pulp wood in the sulphite process, however, it has now yielded a pulp product which has been favorably commented upon by numerous members of the paper trade as a substitute for spruce sulphite in the manufacture of newspaper.

When a forest of scrub pine is matured, a fully stocked stand will yield 30 to 40 cords per acre, when economically harvested according to the practical forestry methods. At the present time there is practically no general use for the timber, outside of fuel, although a coarse lumber is made of it and it is sometimes used for fencing. An evidence of the low esteem in which this pine is held is the price which the Maryland wood brings when delivered—\$5.75 per cord.

Power Plant Economies.

In woodworking establishments where the problem is to get rid of waste rather than to save fuel, and the boiler furnaces serve the part of destructors, there is little attention paid to economy in the generation and use of steam. Nevertheless, there may be more economies to be had than are apparent at first thought.

The fuel charge is not the only important item in the power plant account. The standing charges for interest, taxes, insurance and depreciation, which increase in direct proportion to the investment, often approach the fuel charge in magnitude.

The use of the exhaust steam in kilns, etc., means less investment in boilers, less water to pump or buy, less scale to remove, fewer furnaces to fire and rebuild once in so often, fewer boiler tubes to clean and less expense in many other ways than in the amount of fuel used.

The barbarous method of getting rid of waste by wanton burning is being outgrown. In the first place

there is a good deal less waste than there used to be. Saws cut closer scarfs and the trimmings are used up to the smallest scrap that will serve even to be glued up with other scrap to make composition board. Higher prices for coal give a greater relative value to this waste as fuel, and in woodworking centres like Minneapolis it is sold quite extensively for this purpose. While its price would not ordinarily warrant going to a great degree of refinement in an effort to save it, its cheapness and availability should not lead to the neglect of possible economies.

A source of economy analogous to the use of exhaust steam in the kilns is the use of exhaust-steam heaters. Here again there is increased boiler power, less torture to the boilers by the feeding of heated water, less scale on account of the throwing down of the impurities which are removable by heat before the water goes to the boiler, and less fuel to handle and fire, with less wear on furnace and grates, even if the fuel is worth little or nothing.

This is written with a full appreciation of the fact that many of the power plants of sawmills and woodworking establishments are models of efficiency, with equipment of the highest class; and simply to offset the still somewhat prevalent notion that cheap fuel is an argument against all effort at power-plant economy.

The Strength of Timbers.

The better grades of timber, weight for weight, are stronger than ordinary structural steel. It is for this reason that the frames of the various flying machines thus far brought out are usually constructed of wood.

Wood has considerable elasticity as well as strength. When the automobile first came into being, the wheels on many cars were made entirely of metal, or with metal spokes and a metal or wooden rim, following the design which had been developed with bicycle practice. It was soon discovered, however, that for heavy auto service wood-spoked wheels were far superior, and to-day wood has practically displaced metal in this field. In like manner some automobile manufacturers are using ash frames for their cars.

Lignum vitæ is a material which practically made possible the steam navigation of the ocean by vessels having submerged propellers. The older bearing materials or metals were either too soft to stand the terrific work imposed by a propeller shaft, or they were affected by sea water. Lignum vitæ blocks set with the end of the grain toward the shaft make a well-nigh indestructible bearing. The wood is naturally oily and very hard.

The stern bearings of vessels are not the only ones in which wood is used to advantage. In many agricultural implements, such as corn planters, hardwood boxes are

used for the shafting to run in. When this hardwood is soaked with oil it forms an excellent bearing, and will work for a remarkable length of time.

In days gone by practically all the bearings about a grist mill or sawmill ran in wooden boxes, and it is simply owing to the fact that with our high-grade machinery of the present day metal bearings can be made more cheaply and accurately, that the old wooden box has been so nearly displaced.

In the case of gearing where quiet running is required, wooden teeth are extensively used in heavy mill drives, just as rawhide pinions are used in smaller gears.

Some of the softer and more pulpy woods, such as basswood and whitewood, are extensively used for brake blocks or friction blocks inside of brake bands or in connection with power clutches. The wood grips the metal face with which it is in contact better than any other substance thus far discovered.

White pine is used for pattern-making, on account of its low specific gravity, its close, fine grain, and relatively great strength, the close fine grain and its softness making it easily tooled or machined into a given shape, and at the same time susceptible of a good finish with varnish.

Boxwood is used for wood engravings and measuring scales, on account of its strength and exceedingly fine strong grain, and the ease

with which it can be tooled to a given form.

American Prices Beaten.

Norwegian and Swedish lumber compete successfully with American products for the packing box trade in England, says J. S. Webster, director of Jas. Webster & Bros., Limited, Liverpool, Eng. In a letter to "Packages," Mr. Webster says: "We are afraid that the packing box trade in England would be of very little interest to the United States or Canada owing to the Norwegian and Swedish timber being delivered to this country at such low prices and the freight being so very much less than from your side. Quite recently we went into the matter with a shipper in the States and showed him the prices at which we had contracts running with Norwegian and Swedish houses, and his reply was that the business was no good to him. We do a little business with some Canadian shippers but the great fault with shippers on your side is the irregularity of their shipments. Now from Norway and Sweden we can get regular weekly shipments. Then again, the quality of the timber is superior to yours. We may say we are very large dealers in packing cases in this country and also ship largely abroad and should be very glad to take up the matter with any good shippers in Canada, but as stated above, we are quite sure it will be no use at all to United States shippers."

Long Logs
and heavy logs are handled
just like any other kind by the

McGIFFERT Log Loader

It does heavy work and lots of it and does it
under many conditions impossible by other
methods. It saves money in skidding too.

May we send our catalogue?

Review of Current Trade Conditions

Ontario.

The improvement in Central Ontario for high grade white pine is not so marked as it was a fortnight ago, but is still encouraging. The market for low grade stuff, however, is very disappointing. There is quite a large stock of low grade stock unsold. Most of the mill men are still hoping to realize last year's prices or thereabouts for the common and better end but it is more than doubtful if they will be able to do so. As to the box mill culls and dead culls there is reported to be a large surplus on the market. Box manufacturers have not been at all busy of late, and they have been substituting cull spruce and other stuff for pine. Cull spruce is cheap and is coming into competition with white pine, with the result that box is off considerably in price. One wholesaler estimates the decline at \$4 a thousand, with mill culls \$5 a thousand down as compared with last year. Some mills are reported to be accepting any price offered for dead culls. United States stocks of low grade stuff are also excessive. One mill man with a stock of 30,000,000 feet has recently sold 15,000,000 at \$11 at the mill. The improvement in high grade white pine has become general throughout the province and affects practically all grades. At Sarnia an advance of \$5 has occurred in 1¼-inch, 1½-inch and 2-inch fine, common and better. Cuts and better have advanced by \$1 to \$4 according to the supply, in the various sizes. No. 1 cuts are up \$1 to \$3 for most sizes. 4-inch is much firmer at \$80, an advance of \$5. No. 2 cuts are advancing in the scarcer sizes, the increase being \$2 on 1½-inch, \$3 on 2-inch, and \$5 on 1-inch, 2½-inch, 3-inch, and 4-inch. No. 3 cuts are firm at \$21 for 1-inch and \$40 to \$45 for 2½-inch, 3-inch, and 4-inch, while 1¼-inch, 1½-inch and 2-inch are \$3 up at \$31. No. 1 barn 1-inch is higher by \$1 to \$6, at \$31 to \$42. No. 2 barn is advanced by \$2 to \$3, at \$29 to \$33 and box lumber 1-inch to 2-inch is selling at a range of \$20 to \$27 in place of \$21 to \$23, the figures previously prevailing at Sarnia. Shipments by barge to New York have commenced from Ottawa and the lumber trade has been improved thereby. An extensive movement of lumber is expected shortly and the first of July is looked to to inaugurate quite a lively trade. This will be assisted materially by the reduction of rates to \$2 per thousand, by the Inland Seamen's Union. The floods have caused considerable losses to lumbermen by damage to piled lumber, which was submerged by from three to seven feet of water. The harbor works in Montreal are creating a good demand for logs, as high as \$18 per thousand feet being paid for some pine logs and \$16 for choice spruce. Hardwoods are generally quiet throughout Ontario. Interior finish, however, is in good demand, as the result of extensive building operations. Carload trade is very slow and furniture factories are not buying much.

Eastern Canada.

There is a fair demand for cedar shingles at St. John in spite of the slight depression noticeable at other eastern points. The prices prevailing to-day are about identical with those of the spring. The hot weather, however, is expected to make trade a trifle duller. "Extras" and "clears" are a little more plentiful at St. John but there is no oversupply. The St. John holdings probably total 4½ millions of "extras" and three millions of "clears." Present prices are from \$2.90 to \$3 for dutiable "extras" and \$2.40 to \$2.50 for dutiable "clears" f.o.b. schooner St. John. Spruce lath are unusually steady. The prices are about \$2.75 f.o.b. schooner St. John for dutiable. St. John stocks are somewhat light, amounting to about six millions. Eastern spruce has been in very dull demand of late at Boston. Retailers are not anticipating their requirements to any great extent as they are looking for lower prices later on.

Their trade is fairly good, but they are carrying on a hand to mouth trade, buying only what they need. Frames are selling at the base price of \$23.50 for 9-inch and under. Southern pine is competing quite extensively with spruce. The demand for random is only moderate with prices scarcely steady. The top price for 2x3 and 2x7 is \$21.50, sales having been reported at \$21, though the reports are not confirmed. \$22 to \$23.50 are reported as the selling prices for larger sizes.

Great Britain.

The London spot market is enjoying a fairly cheerful feeling although the actual business is not large. Dealers, however, are not showing any great desire to get rid of their stocks unless they obtain an enticing profit. Foy, Morgan & Company at their recent auction sale disposed of 6-inch prime unsorted Oregon at £12 10s. and £12 to one buyer, and 4-inch sold at £11 10s. Liverpool reports a distinctly more hopeful outlook. The spruce deal market is steady, shippers being able to obtain fair markets at coast points for their goods. The Lancashire ports are also good buyers of spruce deal. It is reported that better than £8 c.i.f. has been obtained for a large steamer cargo in the Mersey. It is thought that St. John, N.B., cargoes for future delivery would be at that or better on cost, insurance and freight terms. Nova Scotian and other lower port shipments are being disposed of at figures based on St. John, N.B., prices. The spruce season has been well started. Spot prices are very firm though the demand is not brisk. If the demand improves to any extent at all the prices are sure to stiffen. 2½x7-inch has eased in price although stocks are not heavy and the demand is fairly good. Scantlings are scarce with firm prices for 3x6-inch. 3x9-inch seems to have lost its popularity and has sold as low as 10s. per standard above the prices of 3x7-inch. Several parcels of Quebec goods have recently been arriving and the prices are quite firm, with the probability that they will remain so. The demand for fresh first quality spruce is good. Birch planks are in poorer demand although the arrivals are scarce.

United States.

Advances in the price of yellow pine have taken place at Chicago recently ranging from 50 cents to \$1 a thousand, and the improvement in the situation has brought encouragement to dealers. The principal cause for the improvement is the badly broken stocks in a number of items. The curtailment in the south, both voluntary and that caused by heavy rains, has also assisted in the upward tendency of prices. White pine is also showing some improvement at Chicago, both the demand and the prices for shop and better being stiff. The yard trade in Chicago is reported good and the country trade is improving. Hardwoods are about steady, though plain red oak and quarter sawed white and red oak are much stronger. Birch is the best selling article on the market. The arrivals of northern pine have been plentiful at Chicago. Prices for shop lumber are holding firm. Siding and other building lumber is quiet in the country yards, although the stocks are considerably broken. Telegraph, telephone and railroad companies are placing a few orders, but the pole trade is otherwise only steady with unchanged prices. Posts are selling fairly well at strong prices. The railroad demand for heavy timbers is improving slowly, but the demand for fir is unchanged. White cedar shingles at Chicago are not in good demand, although prices are steady. The country yards are not buying much. The red cedar market is unchanged though prices are thought to be much lower than they should be. Lath are only in fair demand with prices firm. It is expected that the depression in the cooperage trade will continue until the fall. At

SARNIA, ONTARIO

Saginaw valley the pine market is steady. The tariff uncertainty is causing hesitation in the Canadian business, so that little pine is coming from that source at present. It is reported, however, that there is not much lumber available from Canada as the entire season's cut has been contracted for. At Buffalo, northern pine dealers are regaining confidence and placing orders on lumber more freely. Intermediate grades are most in demand, the box trade being slow with a possibility of improvement in sight. Spruce at Buffalo is enjoying the same boom as yellow pine, cypress and hemlock, as the result of building activity. White cedar posts and poles show a decided improvement at Buffalo. The telephone and telegraph companies are making extensive repairs, using a lot of poles. There is an urgent demand for the upper grades of hardwoods at Buffalo. At New York the trade in northern pine is light with few indications of improvement.

Market Correspondence

Activity Increasing at Ottawa.

Ottawa, June 26.—The lumber trade has been stimulated by the starting of the summer's shipping by barge to New York and other points. The first barges of the season came in during the third week in June and started to load in the Rideau canal basin with stock of the Shepard & Morse Company. The high water had delayed this part of the lumber industry three weeks compared with other years. In addition to this circumstance the barges are scarce on account of active transportation on the St. Lawrence. A little later a very heavy movement in lumber is expected and dealers and manufacturers figure on brisk business commencing the first of July. All prices are steady.

Lumber shippers are delighted to find the rates of the Inland Seamen's Union lowered to \$2 per thousand feet for Ottawa cargoes going to New York. The rate last season was \$2.25, and that was a marked reduction from previous charges. The saving in freight rates is a considerable item on mill culls and box lumber, which range from \$15 to \$19 and are not firm at that figure. The help of a little more favorable tariff would improve business in these weak lines in such a manner that they would come up to the strength of the finer dressed pines. The unsettled state of the American tariff continues to depress the cheap lines of lumber, and any advantage in freight or tariff is readily welcomed. The barge rates at \$2 per thousand are inviting compared with from \$3.25 to \$3.50 charged on the railways.

The lumber manufacturers are only recovering from the effects of the floods. The repair work necessary to mills and platforms is immense and expensive. Buyers who have just returned from the W. C. Edwards Company yards at Rockland report them as having suffered the worst from the deluge. Lumber in piles was submerged to a depth ranging from three to seven feet, and the value correspondingly affected. Where logs were thrown against farmers' fences compensation for the losses is claimed and lumbermen have a new problem arising out of the high water. There has been a long delay in getting mills to run at night and some of them will not likely start the extra shift at all on account of the disturbance following the floods.

A spirited contest took place in the middle of the month between J. R. Booth and the Ottawa City Council over lumber piles which the manufacturer has in Dalhousie ward. The Board of Control had recommended that the piles be removed, on the ground that they were a menace to the safety of other property and that people had to pay higher insurance rates as a result of the lumber. In response to this J. R. Booth, through his son and manager, C. Jackson Booth, wrote the Council a letter setting out that if the lumber piling ground were denied him he would have to shut down part of the mill, as the space in question afforded room for 14,000,000 feet of lumber. The ground was used as a piling place before it was annexed to the city, and Mr. Booth had gone to considerable expense in equipping it, so that he protested against going elsewhere. He proposed erecting a planing mill in another part of the city where his lumber piles were attacked, as a means of working off the lumber. The argument which appealed most to the city was Mr. Booth's statement: "I am reducing the cut of the mill every year and will continue to do so until I get down to day sawing only, owing to the disagreeable feeling against lumber in the city, but it will mean a loss of \$180,000 a year in wages."

This result foreshadowed in a published statement brought out a large delegation of laborers to the City Council when the time came to consider the report of the Board of Control against the lumber. By a vote of 14 to 6 the Council decided to retain the lumber piles.

Alarming reports of bush fires in the Ottawa Valley limits have reached the city. The mining district along the Montreal river is the centre of the trouble, and the woods around are being destroyed at a rate that promises havoc as serious as last year, when some 200 miles were burned over. The north side of the Kippewa river is another locality suffering from the fires. One prominent lumberman believes the Temagami reserve is in danger. Some of the territory burned over contained

exceedingly valuable timber and the loss is deplored by all the limit holders. But even the least valuable region is laden with timber eagerly sought now, with trees growing scarcer in that region. The necessity for more fire protection is keenly felt by many of the Ottawa lumber kings.

The first raft of the season left Rockland for Montreal on June 18, owned by W. H. Kelly, of Buckingham, who has sold a considerable quantity of timber to be used in the construction of the Montreal harbor. This raft was cut on the Gatineau, and comprises chiefly pine and hemlock. Last year Mr. Kelly shipped four rafts to Montreal, but the shipping has been hindered this season by the high water. The works in Montreal have created a considerable demand for logs. Some pine logs have brought \$18 per thousand feet and spruce \$16, these being choice sorts.

A movement is on foot to organize the mill hands of Ottawa into an international union for the purpose of insuring the continuance of the good wages at present in vogue. Although the times were comparatively dull this season the mill owners did not reduce wages, and there is a very happy relation between the employers and the men. The proposal to bring the mill hands into a union came incidentally after a strike of another class of laborers which indirectly affected the lumber employees.

Log Sorting Enquiry Commenced at St. John.

St. John, N.B., June 25.—Since last writing there have been many happenings of great interest and importance to the lumbermen of New Brunswick and particularly to those whose scene of operations is situated along the St. John river. Perhaps the most important event was the opening of the enquiry of the International Waterways Commission at Van Buren, Me., and the taking of evidence having to do chiefly with the stopping of logs for the purpose of sorting them at the sorting-works of the mills situated in the vicinity of Van Buren.

Among the evidence submitted was that of Mr. Elias E. Jones, of St. Francis, Me., who testified that 40,000,000 feet of logs were hung up on the St. John river from the mouth of the Allegash—a branch of the St. John—to Fredericton. While this is a large quantity of logs and, while it would seem a serious matter to those who own these logs, yet it is probable that many of the logs, particularly those between Grand Falls and Fredericton, which quantity is estimated at 22,000,000, will be eventually gotten to the mills. While, as Mr. Jones states, quantities of these logs have been left, many of them will yet be gotten out by the process known as "sacking the shores," by which term is described the work of a crew of men who go ahead of the corporation drivers rolling into the water the logs which are stranded on the banks. As to the quantity of 18,000,000 feet above the falls, the outcome is still problematical and there is little doubt that all, or the greater part of them, will be left until next year.

The findings of the commission mentioned above will be awaited by local people with the keenest interest as it has been recognized for years that the matter of stopping the logs at Van Buren for sorting purposes is one which has a very unfavorable effect upon the successful driving of down-river logs and that its importance cannot be over-estimated.

The situation as regards forest fires has been greatly relieved by an opportune fall of rain. The actual damage by fires was probably not as important as some newspaper accounts would indicate. The most serious fires were in the Miramichi section, where they were somewhat severe and where considerable quantities of standing timber was destroyed.

The slight depression, which was mentioned in the letter of June 8th, in the cedar shingle trade has had but a slight effect upon local prices and the current prices at present writing are practically the same as has been the case throughout the spring season, although in many cases it is probable that a loss of confidence in the cases of some of the manufacturers, might result in a slight shading of the figures which were mentioned at last writing. A local dealer said to-day that the approach of the hot weather invariably brought a lethargic tone to the cedar shingle market and that the present year would probably be no exception. Local stocks of "extras" and "clears" have augmented somewhat during the present month but in no case can it be said that the wharves or yards are overstocked. Four and one-half millions of "extras" and three millions of "clears" would be the correct figures to designate the local holdings of cedar shingles. The volume of business in this line has also been lighter than that of the previous month so far as local holdings are concerned. But, with all these indications to the contrary considered, local shingle manufacturers expect to market their entire output without any concessions in the way of prices that could be called really important. An enquirer for cedar shingles would be quoted on "extras" from \$2.90 to \$3 per thousand on the dutiable article, and from \$2.40 to \$2.50 per thousand on dutiable "clears" f.o.b. schooner St. John.

The trade in spruce lath has shown few developments during the past month; this line of trade, usually prolific of changes, has been marked, for some months past by a sameness in prices and in conditions which is quite remarkable. Prices have hovered in the vicinity of \$2.75 (on the dutiable goods, f.o.b. schooner St. John) for some months past. The figure named is, as nearly as may be figured, a representation of the local value to-day of this line of goods. Local stocks are fairly light; six millions would cover the quantity available in the local market.

News of The Pulpwood Situation

United States Senate Agrees Upon \$4 a ton Duty.—Canadian and American Opinions Differ

The U. S. Senate has agreed upon an amendment to the \$2 a ton duty on print paper fixed by the House of Representatives. The Senate's amendment places the duty at \$4 a ton, which is two-thirds of the present rate, according to the Dingley Law. The vote was a close one, being 44 to 42. Senator Aldrich in speaking to the amendment said that there was a great international question pending before the Senate which had not existed when the House passed the tariff bill. The Province of Quebec, he said, had adopted a policy, announced by its Premier, by which it was intended to effectually prevent the export of logs or pulpwood. "We ought to make the duty on print paper so high," he said, "as not to permit the carrying out of such a plan."

Quoting \$27.59 as the price of producing a ton of print paper in Canada, he continued: "The result of our investigation, made through the books of paper companies themselves, covering a great variety of mills, under a great variety of circumstances, led me to the conclusion that the cost in this country is \$31.51 a ton under the most favorable circumstances." The duty of \$4 a ton was not, therefore, in his opinion, sufficient to cover the difference in the cost of production between the two countries. Referring to the report that the International Paper Company had purchased 12,000 square miles of woodland in Canada, Mr. Aldrich suggested that that company might be caught in the Canadian trap, preventing them from bringing that wood across the line.

A Nebraska Senator's Views.

In a discussion upon the duty on paper in the United States Senate, Senator Brown, of Nebraska, recently said: "Canada is our only competitor in this market. The seas and the inferior product of other countries than Canada protect the mills of the United States against all competition worth mentioning. Canada had an investigation into the subject in 1901. The testimony in that investigation showed that the American mills had an advantage of \$5 per ton in the cost of production of print paper. Following that report the manufacturers of Canada petitioned their Government to continue the 25 per cent. ad valorem duty on paper importations."

"Our consul in the Province of Quebec reported that the laborers in the Canadian mills receive as high if not higher wages than those in American mills. It is undisputed by the testimony taken by this committee that many of the workmen in the Canadian mills are American citizens, and receive higher wages than when in the United States."

Senator Brown drew the following conclusions at the end of his argument:

"Our pulpwood supply is nearly exhausted. The pulpwood supply of Canada is apparently inexhaustible. Free pulp would tend to conserve our pulpwood. The production cost of print paper is less in the United States than it is in Canada. A ton of news print paper costs in Canada \$29.54 to manufacture. In the United States it costs \$27.74 per ton. The print paper market is controlled in the United States by combination, and whatever duty the law may fix will assist the combination in that control in violation of the law of competition to the injury and outrage of the public."

The subject was introduced by Senator Aldrich, who, as chairman of the Finance Committee, proposed an amendment increasing the duty on print paper from one-tenth to two-tenths of a cent per pound, which, he said, equalled \$4 a ton. The Dingley Law placed the duty at \$6 a ton, and the House reduced it to \$2 a ton.

Senator Brown declared that the print paper industry needs no protection. These paper mills, he insisted, have an advantage over every foreign print mill, whether they are in Scandinavia, Germany, or Canada.

A Canadian Manufacturer's Opinion.

"Canada has smitten the United States on one cheek and now the United States is smiting herself on the other," was the conclusion drawn by Mr. Carl Riordon, of the Riordon Paper Mills Company, Limited, when his attention was drawn to the Washington despatch announcing that the Senate Committee on Finance had practically decided to place a duty of one-twelfth of a cent per pound on pulp coming from countries which impose a countervailing duty on like articles imported into those countries from the United States.

"This duty on ground pulp," he said, "will apply only to Canada. Whatever the United States does she cannot get away from the fact that she must get her mechanical pulp from Canada. It has been shown that although last year the demand for pulp was less than in 1907, yet the price had increased, and that, although the price of Canadian pulp is \$2 dearer than American pulp, yet there has been a large exportation from Canada to the United States. This, even without the testimony of the American forestry officials, shows clearly that the United States cannot get along without our mechanical pulp."

"Therefore this duty, if finally accepted by both Houses of Congress, cannot but militate against the American consumers. It will simply mean so much added to the price which will be already boosted by the prohibition of the export of unmanufactured pulp from this country."

Quebec in Position to Dictate Terms.

The situation in regard to the export of pulpwood from Quebec is well treated in a statement made by a prominent Montreal lumber dealer in the following language:

"Premier Gouin has announced that the Quebec Government intends to adopt the same policies as the Ontario Government, with regard to the exportation of logs from Crown Lands. In every license for the cutting of logs on Crown Lands in the Province of Ontario there is a clause forbidding the exportation of any of these logs from Canada, unless manufactured into either lumber or pulp. The Quebec Government stated some years ago that they would not change any of the conditions of their license until 1910, so that this new condition will be inserted in their licenses then."

"At the present time there are probably more than 200,000 cords of pulpwood cut from Quebec Crown Lands and exported to the United States per year. The president of the American Pulp & Paper Association has stated, under oath, before a committee of Congress, that the United States pulp and paper makers cannot do without Canadian wood, and the Chief Forester of the United States has stated the same thing in a published letter. The United States Census Bureau has just published the statistics covering the consumption of pulpwood in the United States last year, and this shows that, although they took much less wood from Canada than the year before, on account of the depression, they had to pay a higher price for it. This shows they must have Canadian wood and that there is not enough of it offering to supply their demands."

"It is clear, therefore, that they cannot do without the wood that comes to them from the Quebec Crown Lands and that they must either move their mills to Canada or get Canada not to put these further restrictions on wood exported, by removing their tariffs on all paper and pulp made from wood, and on lumber. The fact is that as the Quebec Government controls the wood that they admit they must have, it is in a position to get what terms it wants from the United States tariff makers, through the Dominion Government. The terms it wants are such as will build up the greatest paper and pulp industry in the world, for which it alone has the resources. This is especially important, as this part of Canada is farthest behind in development, because its agricultural resources are not as good as those further west. Quebec has lost a considerable part of its population because they have wanted industrial employment, and have gone to New England to get it. There are plenty of paper and pulp towns in New England where French is the principal language."

"Europe has increased its exports of pulp and paper to the United States in recent years, far more than Canada has, because their Governments encouraged the development of the industry, and so it was able to supply the demands of the United States, which that country was no longer able to supply on account of the decreasing quantity and the increasing cost of its pulpwood."

Recent Patents of Interest to Lumbermen.

The following patents are included in the March Canadian Patent Office Record

117,112—Woodworking machine, Dana S. Courtney, Chicopee, Mass., U.S.A., March 9, 1909, 6 years.

117,270—Logging engine, Jesse E. Knight, Bellingham, Wash., 16, 1909, 6 years.

117,286—Sawmill, Norman Earl Rice, Zenia, Cal., U.S.A., March 16, 1909, 6 years.

117,308—Gang edger, James T. Stoddard, Portland, Ore., U.S.A., U.S.A., March 16, 1909, 6 years.

117,354—Feed mechanism for planing and moulding machines, James Baird, Galt, Ont., March 23, 1909, 6 years. This patent covers a sleeve with projecting lugs detachably secured to the shaft of the feed roll, a gear with projecting lugs loosely mounted on the sleeve, and means to drive the gear. It also covers a pair of feed rolls, sleeves with projecting lugs detachably secured to the shaft of the feed rolls, gears with projecting lugs loosely mounted on the sleeves and an intermediate gear to drive the said gears.

117,479—Method of impregnating timber, Frank L. Middleton, Washington, D.C., U.S.A., March 30, 1909, 6 years. This patent covers the process of preserving wood which consists in impregnating timber and the like under hydraulic pressure with a solution of salts of heavy metals with the addition of an aluminium salt and in carrying on the impregnation at a temperature ranging between 60 and 98 degrees.

117,547—Band resaw and double jointer, James McWilliams, Chicago, Ill., U.S.A., March 30, 1909, 6 years.

A Machine for a Great Variety of Work.

A new machine, of which an illustration is presented herewith, designed to meet a growing demand for a combination machine, adapted to a great variety of work, has been manufactured by the DeLoach Mill Manufacturing Company, of Bridgeport, Alabama. The company assert that the "Multi" mill is a high grade picket machine, a high grade rift flooring machine, a high grade lath mill, of large capacity, a lath bolter, a power-feed rip saw and a gang edger, and is also adaptable to many other kinds of work.

It has the open side that will take in stock of any width from 5-16 of an inch to 7 inches thick, and is guaranteed to operate successfully with ten saws. This is made possible only by the use of the variable friction feed by which the feed of the rolls may be reduced to anything desired, thus protecting the machine from severe strain.

The variable friction feed is reversible and in connection with it is used a powerful system of planetary gears encased and run in oil, which protects them from dust and makes them very durable. They are geared 20 to 1, making the feed equal to all demands.

The frame is 6 feet long and about 30 inches wide; the extended table is 12 inches wide; arbor, 2 3-16 inches; feed rolls, 5 inches in diameter, and chain oiling boxes. The machine is quoted with six 20-inch inserted tooth saws and the weight is 2,400 pounds.

The variable friction feed combined with the planetary gears is a novel and valuable feature, and this mechanism has been manufactured and introduced by the DeLoach Company in connection with various kinds of woodworking machines, such as planers, shingle mills and gang edgers. On account of the high compounding of the gears and the power, it is adapted to driving automobiles and any similar work.

For 25 years the variable friction drive has been a favorite feature

The DeLoach "Multi" Mill.

with Mr. A. A. DeLoach, the president of the company, and many successful applications of this idea, which is being adapted by many manufacturers, have been developed during the time.

Very soon Mr. DeLoach expects to begin the manufacture of boats, in which he will employ this feed, claiming thereby to be able to vary the speed of the propeller to suit any load, any wind or any condition, and to save 15 per cent. to 20 per cent. of all power or give 15 per cent. to 20 per cent. better results with any given power.

For descriptive literature and information address DeLoach Mill Manufacturing Company, Bridgeport, Ala.

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

738. Paper.—A large American firm doing business in Havana, Cuba, desire to be placed in communication with Canadian manufacturers of wrapping and toilet paper.

739. Box shooks.—A thoroughly reliable young American broker in Havana desires correspondence with Canadian manufacturers of box shooks.

743. Veneers, maple blocks, wash boards, handles, etc.—A representative of one of the largest firms of dealers of wooden goods in Birmingham, Eng., is in Canada with a view to making arrangements for supplies for the coming year. Will be pleased to call on manufacturers of the above goods.

745. Birch slabs.—A Lancashire firm wishes to obtain prices of birch slabs free from large knots in sizes 2 feet by 2 feet $\frac{7}{8}$ -inch wide by $\frac{1}{2}$ -inch thick, in three standard lots, c.i.f. Manchester or Liverpool from Canadian manufacturers.

748. Laths.—A Lancashire firm asks for prices of plasterers' laths all sizes from Canadian manufacturers.

749. Spruce boards.—A Manchester firm desires to correspond with Canadian exporters of spruce boards.

750. Birch deals.—A Manchester firm asks for prices and dimensions of birch deals from Canadian exporters of same.

751. Box boards.—A Manchester firm asks for quotations of box boards from Canadian manufacturers.

753. Plasterers' laths.—A Manchester firm asks for prices of plasterers' laths 3 feet, 3 feet 6 inches, 4 feet, 4 feet 6 inches, from Canadian exporters.

756. Pine doors.—A Lancashire firm asks for prices and dimensions of pine doors from Canadian manufacturers.

758. Spruce boards.—A Lancashire firm asks for prices of spruce boards, all sizes, from Canadian exporters of same.

759. Pine logs.—A Manchester firm asks for prices of pine logs from Canadian exporters of same.

760. Fruit boxes.—A South African Government asks for quotations for fruit boxes, of spruce or pine preferred.

781. Wood.—A South African Government railway asks for quotations from exporters of hickory, pine and all woods employed in coach and truck building.

782. Wood. A South African Government railway asks for quotations from exporters of maple or other woods suitable for decorating coaches.

783. Sleepers, wood.—A South African Government railway asks for quotations from exporters of sleepers, hardwood, or if soft wood same must be creosoted.

802. Maple roller blocks.—Inquiry is made for the names of shippers of maple roller blocks located in western Ontario by a firm in the north of England.

Lumber Matters in the Courts.

Risk of Results in Sawing Oak.—Chief Justice Parker has given the judgment of the Full Court of New Brunswick on the motion of the defendants in the case of F. E. Sayre & Company, Limited, v. Rhodes, Curry & Company, Limited, to set aside the verdict for \$1,224, for the plaintiffs for oak sold and delivered to the defendants and sawed for them also. Defendants claimed that the oak did not turn out as ordered and that the plaintiffs had assumed the risk of this. They based this claim on a telephone conversation. The plaintiffs denied that the telephone conversation placed the risk upon them and showed that by previous written correspondence they had expressly refused to accept this risk. The matter resolved itself solely into one of fact and the court agreed with the verdict of Judge McLeod in the first hearing of the case. The motion was dismissed and the verdict for plaintiffs upheld.

Dispute Regarding Purchase of Ties.—Before Mr. Justice Metcalfe, in the court of King's Bench, at Winnipeg, the case came up recently of John L. Hyland, trading as John L. Hyland & Co., v. D. A. Scott and E. Gilbault, carrying on business under the firm name of Scott & Gilbault, and the said Scott & Gilbault. The plaintiff claims that he agreed to advance to the defendants, \$10,000 in instalments for which they agreed to deliver 25,000 railway ties by July 31, 1907. The plaintiffs claim that they advanced the \$10,000, but only received 16,815 ties. Plaintiff seeks to recover \$695, being the amount of the balance of the ties not paid for. An agreement was arrived at between the parties and the case will stand on the list until finally adjusted.

Payment for Sale of Logs.—The Green Bros. Lumber Company, of East Templeton, lost their appeal in the Montreal Court of Review from the judgment of Judge Rochon in the Hull Superior Court, which dismissed an action brought by them against the East Templeton Lumber Company for \$4,500. Green Brothers contended that this amount was due to them from the sale of a large quantity of logs. Defendants pleaded successfully that they owed nothing but that they had really paid \$1,800 too much on the transaction. They therefore made a counter-claim for this amount and were given judgment in their favor.

The Forestry Branch of the Department of the Interior has recently issued the first sheets of a new "forest atlas," which will include plans of the Dominion forest reserves, of which the surveys are now being carried on. The "legend" is now being sent out; this designates the marks used to denote natural features, the different species of trees and the amounts of timber that can be obtained per acre from timbered areas, entries of various kinds (such as homesteads, mineral lands, etc.), burns or brules, cuttings and sales, roads, trails, railways, canals, flumes, telegraph and telephone lines buildings, etc. One of the smaller forest reserves—that known as "The Pines," situated near Prince Albert, Sask.—has already been mapped, and the map of the Riding Mountain Forest Reserve, in northwestern Manitoba, is now in preparation. As surveys of the forest reserves and other forested districts are completed, maps of these will be prepared and added to the atlas. It is hoped that the general scheme of indicating information, such as the different colors for stands of timber of various densities, and the other special signs adopted by the Forest Service of the Dominion, may be put into general use throughout Canada, so that forest maps may be uniform in plan and may be easily compared.

Does a saving of from 25 to 50 per cent of your power cost interest you?

Mr. Manufacturer:—

You know that your one best step towards greater profits is reduction in cost of production.

You also know that one of the big items of cost is power—perhaps the biggest.

Now wouldn't it interest you—wouldn't it mean money in your pocket—if you could save from a quarter to one half of what your power is costing you to-day?

Now it is just that saving we wish to tell you of. Even though your plant is equipped much above the average, it is to your interest to know about this still better system.

We want to give you all the facts about Western Electric Induction Motors and prove to you conclusively what saving in dollars and cents and what increase in efficiency that system of power will effect in your plant.

CIRCULAR SAW

Look your plant over and figure out how many tons of metal you keep rotating over the heads of your workmen and how many square feet of belting you keep travelling at express train speed.

It takes power to keep that mass of non-productive machinery moving. Power that costs you money and adds nothing to the production of your plant.

Twenty-five to fifty per cent of power developed by your engine is lost by the line shaft and belt transmission system.

This fact has been repeatedly proven by actual tests.

You can save this loss—add it to your profits by installing Western Electric Induction Motors.

They can be mounted on the floor, wall or ceiling as required, or on the machines which they are to operate, thus eliminating all belts and hangers.

Western Electric Induction Motors are the simplest of all electrical machines. In operation they are as simple as a shaft rotating in its bearings and require no attention beyond that given to bearings.

The individual motor driven machines form compact units in themselves, thus allowing the workmen to get around them better and do better work. Besides this you pay only for the power used in actual production—only the machines which are actually employed in turning out your product need be kept running.

Western Electric Induction Motors are the result of 30 years of untiring efforts at improvement. That the Western Electric Company have produced \$230,000,000 worth of electrical apparatus during the last five years is a significant fact that speaks volumes for the efficiency of their apparatus.

These are but a few of the facts about Western Electric Induction Motors. If you are interested in increasing the efficiency of your plant—if you are interested in cutting down the cost of your power—write to-day for Bulletin No. 607.

We would be glad to have our engineers look over your plant and prove to you by actual figures what a saving you can effect by installing Western Electric Motors. This service is absolutely free and puts you under no obligation to us.

Write to-day for Bulletin No. 607 and full particulars.

The construction of a large paper mill is projected at Fort Frances, Ont. Address Warren Curtis, jr.

One hundred and twenty tons of pulp per day is being turned out by the Spanish River Mills at Espanola, Ont.

Graves, Manbert, George & Company will cut about 8,000,000 feet of hemlock at their mill at Midland. The mill at Byng Inlet is running night and day and the cut will probably exceed last year.

The ratepayers of Campbellford, Ont., have passed a by-law to grant a fixed assessment of \$2,000 for ten years on a pulp mill to be erected by the Northumberland Pulp Company near Ranny Falls.

The equipment of L. Christie's sawmill at Fort Frances is completed, and E. Clairmont, of Parry Sound, has taken charge. The mill has a capacity of 35,000 feet a day, the planer 50,000 feet, and the lake mill 40,000 feet.

The Bruce Mines Sawmill Company, Limited, Bruce Mines, Ont., has been incorporated with a capital of \$60,000. Incorporators, F. H. Lawrence, of Macdonald Township; J. O'Flynn, G. W. Goodwin and T. J. Wilcox, all of Sault Ste. Marie, Ont.

W. H. Rowley has been appointed to represent the Ottawa Board of Trade at the meeting of the Chamber of Commerce of the British Empire in Sydney, Australia, in September. Recently, as chairman of a committee of manufacturers, he secured the adoption of a uniform bill of lading for Canada.

A charter has been granted to the Kingston Pulp Company, which will deal in sulphite and wood pulp, paper, cardboard, fibre, etc. The capital stock of the organization is \$100,000, and the head office is at Kingston, Ont. The incorporators are Daniel Smith, C. A. Macpherson, Francis King and Hugh Macpherson, of Kingston, and F. H. Hooper, of Brownsburg, Que.

The most serious of the northern Ontario fires, which have been raging recently, are reported to be under control. Hon. Frank Cochrane, Minister of Lands, Forests and Mines, has received a brief communication from the provincial superintendent, in which he states that his staff has been so busily engaged in the active work of fire-fighting that they have as yet had no opportunity to make an estimate of the amount of damage done. "I fear, however, that the damage will be considerable," said the Minister, in an interview. "This has been what we call a bad year for the protection of standing timber, as there has been scarcely any rain." Hon. Mr. Cochrane has decided officially to investigate the origin of the other big forest fire which occurred in the Temiskaming region at the end of the T. & N. O. Railway near Cochrane.

Eastern Provinces

The lumber mill of B. W. Titus, at Upham, N.B., was recently destroyed by fire.

The Peribonca Pulp Company, of Peribonca, Que., will rebuild its mill, which was burned last year.

The Smith mill, at Burton, N.B., is being operated by the newly organized firm of the McLellan & Smith Lumber & Pulp Company.

Forest fires are reported along the line of the Moncton & Buctouche Railroad in New Brunswick, which have already destroyed much timber.

The St. Maurice Industrial Company is preparing plans for the erection of a large pulp mill at La Tuque, Que., and is now putting up a roasting mill.

The Nordin Company will build a large up-to-date woodworking factory and lumber mills at Tide Head, N.B. A large quantity of machinery has been ordered from Sweden.

The Nepisiguit Lumber Company, composed principally of American capitalists, has purchased the New Brunswick mill and timber lands of Adams, Barnes & Company and will erect modern new buildings.

The St. Lawrence Paper Mills Company is about to install machinery to handle old magazine stock at its mill at Mille Roches, Ont. It is understood that the company is thinking of opening an office in Toronto.

Destructive forest fires have been devastating eastern Guysboro, N.S. The drought made the forest as dry as cinder and forest fires started in six places within sight of Guysboro. Driven by high wind, the fires spread rapidly and large belts of valuable timber were wiped out.

Dr. F. S. Pearson, a prominent capitalist of Montreal, has just taken up an option on the Murphy lumber district in Mexico. Dr. Pearson has been acting in conjunction with the Mexican Transportation Company, of Canada, and together they have put up \$3,000,000 for the property. This tract covers about 500,000 acres of timber land in Mexico adjoining the extensive property of the Sierra Madre Land & Lumber Company, which the Pearson interests also contemplate taking into their fold, together with two Mexican railroad properties, the Chihuahua & Pacific, owned by Moore & Schley, and the Sierra Madre & Pacific, which Colonel Green constructed for the purpose of opening up his own lumber properties, the Sierra Madre.

A new industry is now being promoted on the Miramichi river by James Feinbrook, who has developed a project for extracting turpentine, tar, wood alcohol and wood oils from the stumps of tree tops and lumber left by the lumbermen. Mr. Feinbrook has been successful in extracting a quantity of each of these products by a secret process, and the turpentine is pronounced to be as good as that produced in Sweden. Mr. Feinbrook had eight men at work all winter at McKenzie's Brook, near Doaktown, making preliminary tests. He has also secured a concession of a large tract of land for ten years, and in order to exhaust this area an expenditure of \$100,000 will be necessary. He is planning the formation of a \$1,000,000 company to carry on the project.

British Columbia

J. H. Potts, of Victoria, paid \$12,000 to W. Piggott for seven timber berths on Portland canal.

G. Tanner has bought his partner's interest in the Part Hammond Lumber Company at Port Hammond, B.C.

The steamer *Clan MacInnes*, of the Australian mail line, loaded lumber at Hastings Mill in June for Sydney, Australia.

Heavy rains have killed off practically all the bush fires in British Columbia, and thus prevented further loss of standing timber.

New York and Iowa people have bought 75 sections of timber on Moresby Island, B.C., with the intention of building a mill at Skidegate.

McNail and Skeens, of Vancouver, paid \$70,000 for 33 sections near Alberni canal, Sproat Lake and Great Central Lake, Vancouver Island.

The Lamb-Watson Lumber Company has started up its mill at Kamloops with 110 men employed. A new addition has been erected, costing \$20,000.

The Mayook Lumber Company, of Mavook, B.C., had its lumber stock destroyed by fire, with a loss of about \$50,000. It was covered by insurance.

The dry kiln of the Independent Shingle Company in New Westminster caught fire on June 11, but the blaze was extinguished before much damage was done.

William Robertson has gone from the Rat Portage Lumber Company's office in Kenora, Ont., to take charge of the interests in British Columbia. He will reside in Vancouver.

The big steamer *Gymeric*, of the Weir line, is taking on a cargo of lumber at the Fraser River Mills, for Australian ports. Other vessels are awaiting their turn to tie up at the docks.

The Arrow Lakes Lumber Company's mills at Kamloops, B.C., have reopened for the season, over \$20,000 having been expended in repairs and additions. A force of 110 men is employed.

Andrew Anderson heads a syndicate which has purchased the property of the Hartley Bay Lumber & Manufacturing Company. This company was started by Capt. McCoskrie, of Vancouver, who acted as general manager.

Fires started recently in several Vancouver Island districts. The worst outbreak was in the Jordan river country along the west coast. It was feared, if the hot weather continued, that a large area of valuable timber would be destroyed.

The sawmill at North Vancouver owned by Mr. J. S. Emerson has been sold to McAllister & Urquhart, who are now overhauling the plant preparatory to starting operations. The new firm will do business as the North Vancouver Lumber Company.

The Fraser River Lumber Mills, of New Westminster, is importing eighty French-Canadians as an experiment in the adoption of white labor in their mills. They will be given every encouragement, and if the test is a success, others may be brought west.

An order has been placed by the Fraser River Company for a 750 kilowatt steam turbine engine with a capacity of 1,000 h.p., which will be direct connected with a dynamo to be used for lighting the entire plant. This will be the first engine of this type to be installed in the province.

The British barque *Hawthornbank* is loading lumber at Hastings Mill for the West Coast, after unloading at Eagle Harbor, a cargo of creosote from Terneuzen, Holland. Capt. Ballantyne came near capturing the record for a slow passage, flat calms and head winds alternating.

A large shipment of spruce to be used on the new yacht of the Emperor William of Germany has been cut at the Swanson Bay Mills, British Columbia. It includes 20,000 feet in all. The timber was sent out on the Blue Funnel liner *Antilochus*. It is extra fine spruce and is to be used on the decks of the new yacht.

Papers have just been drawn up for the incorporation of the Westminster Mill Company, at New Westminster, B.C. The company will build a shingle mill now and a sawmill later. The incorporators are William A. Bailey, J. L. Batley, F. Eugene Ward, Wm. Proctor, C. J. Vultor and G. W. Beach, Seattle, Washington.

It is reported that the Elk Lumber Company are considering the feasibility of taking a drive of logs from Elk river via the Kootenay to Nelson. If their plan is put into operation successfully, it will overcome the driving of the Elk, where there is an annual waste of thousands of feet of logs which get away during the spring freshet.

The furthest north belt of fir has been sold by J. M. MacKinnon, managing director of the Canadian Pacific Sulphite Pulp Company, of Vancouver, to Thomas Meredith, of New Westminster, and R. W. Gibson, of Victoria, both of whom are already largely interested in lumber mills and timber in British Columbia. The purchase comprised 70 sections, for \$250,000.

The Michigan Pacific Lumber Company, of Grand Rapids, Michigan, who recently acquired extensive interests on the Jordan river, fifty miles west of Victoria, have announced that a large lumber and shingle mill will be built. The resident officials of the company are J. W. Moore, manager; Aldebert Hankin, superintendent, and W. Harlowe, foreman of camps. The headquarters of the company are in Victoria.

Mr. George McKay, provincial forest ranger, who has returned to Vancouver after a ten weeks' trip among the woods along the north coast, reports that there were very few complaints of trespassing. Some of the logging camps were rather idle, especially where cedar logging was carried on, as there is to be little demand for this wood at present. In the fir woods it was more active, about 40 per cent. more men being employed this year than last.

The Fraser River Lumber Company, in order to facilitate logging operations in the Comox limit, on Vancouver Island, is laying down seven miles of standard gauge track, to cost \$150,000. The line will be in operation in September, and will have a capacity of handling 200,000 feet of logs daily. Mr. A. D. McRae, of Winnipeg, president of the company, and Mr. Peter Jansen, vice-president, of Beatrice, Nebraska, were in Comox recently on a visit of inspection.

The quarter million dollar plant of the Mundy Lumber Company, located at Three Valley, a few miles from Revelstoke, B.C., was totally destroyed by fire recently. The conflagration was started by a spark from the refuse burner. The mill fire brigade managed to save the timber in the yard near by. The chief stockholder in the company is Mr. E. F. Mundy, of Bradford, Penn. The mill is to be rebuilt at once, and will be ready to commence cutting in September.

Mr. G. A. Disque and Mr. John W. Little, from Erie, Pa., have completed a deal involving the purchase of a large tract of timber lands on the mainland 100 miles north of Vancouver. The purchase was effected mainly as an investment. A sawmill may be established on the property, or, on the other hand, the timber may be sold on the stump, or the whole tract may be disposed of, all depending upon what may appear most advantageous in the future. Both buyers expressed themselves as highly pleased with Vancouver and its fine opportunities for investment.

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies are guaranteed never to fail when used as directed. You get your money back if they ever do.

They are

Johnson's Horse Liniment No. 1.

A penetrating Alcoholic Liniment. Put up in one gallon jugs, with full directions, per imperial gal. \$4.50

Johnson's Horse Liniment No. 2.

A combination of the best oils used as liniments, imp. gallon . \$3.00

Johnson's Horse Colic Remedy.

A sure and speedy cure for colic. Imperial gallon \$5.00

Johnson's Veterinary Healing Ointment.

Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada.

Put up in 2 lb tins, each . . . \$2.25

or in 1/4 lb tins, per dozen . . \$3.50

Johnson's Condition Powders. (Concentrated).

Put up in bulk, per lb. 30c.

These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to \$100.

YOUR OUTPUT

of FLOORING, CEILING and SIDING improved and increased by adopting a SYSTEM OF SHIMER CUTTER HEADS

which systemize the work in planing mills and solve the problem of economical woodworking. They last long and cost little. Made of Steel Forgings of 60,000 lbs. tensile strength they represent the strongest combination possible to meet every emergency.

The illustrations herewith show the compact and workmanlike manner in which the Shimer Cutter Heads are constructed—how the vital principle of clearance is applied to all leading bit points—how the alternate and shearing effect of the cut reduces to a minimum the tearing out tendencies in working cross-grained lumber. A study of the illustrations will also show that the Bits have the exact shape in their exterior circles, insuring that a uniform product will be maintained indefinitely without extra trouble and expense. Through the "make-ready" built into the Shimer Cutter Heads your workmen are relieved of the labor connected with filing and re-filing straight bits to pattern—the lining up of such knives and other needless worries.

They are not an expense, but they save expense by giving you an easier and faster way of getting out your work. Address

The Old Reliable Gordon Hollow Blast Grate

"The grate with the reputation"

Covered by six patents, the last issued on August 25, 1903. Others pending.

Burns Sawdust.

Saves Wood.

**Increases the Efficiency
of a Boiler**

Makes Firing Easy.

Sample Testimonial (One of over 600)

"GORDON HOLLOW BLAST GRATE CO.,
Greenville, Mich.

"Garvin, Okla., March 18, 1909.

Gentlemen:

"It is a pleasure for us to state that since we put in three sets of your hollow blast grates in our battery of saw mill boilers we have been able to surprise some of the old timers in the saw mill business.

We have been informed by a great many practical saw mill men who professed to know, that

We would never be able to Keep Up Steam on Cottonwood Sawdust.

However, we are pleased to state that at the present time

We have no trouble whatever in Firing Three 72 x 18 Boilers on,

Cottonwood Sawdust Exclusively,

using but one fireman, and the greatest trouble we experience is to

Hold the Pop Valve down and Keep the Negro Fireman Awake.

If you have any 'Doubting Thomases' who do not believe this, kindly send them over, and if we do not convince them of the above facts, we will pay the freight both ways, no matter where they are located.

"Yours very truly

"CHOCTAW LUMBER & VENEER CO."

Sold on Approval. Thirty days given for trial, counting from date of installation. In case of rejection, We Pay the Freight Both Ways.

In writing for prices state number of boilers and whether you have ordinary furnaces or Dutch ovens; and give width and length of grate surface or surfaces.

Gordon Hollow Blast Grate Co.

We Make Filing Room Tools

Sectional View of Hanchett Band Saw Swage

The sectional view of our swage shows our new spring bracket which permits the swage to tip forward during the operation of swaging. In this bracket we have preserved our compact construction features. It is practically as strong as a solid bracket, is impossible to get out of order, and is easily adjusted to give any amount of spring desired, or to be rigid and allow no spring.

This new feature of Hanchett swages still further increases the efficiency of a swage which without this improvement has for a number of years been quite generally conceded to have the lead over any other swage manufactured. The spring bracket, in conjunction with the action of Hanchett dies, proves unusually effective in bending the tooth forward so that it may be faced perfectly with little grinding. With this spring bracket with its perfect adjustments, added to the unusually wide range of adjustment of Hanchett swages, the filer can swage his saws to a nicety, and adjust his swage to place the points just where he wants them, and get any amount of hook wanted. We have already received some very enthusiastic letters from filers who have tried the new spring bracket, and they state that with the Hanchett swage thus equipped it will never be necessary to knock the teeth down with a hammer or use any other device for this purpose, as the spring bracket enables the swage to put the point just where it is wanted, and keep a full back. These brackets will fit all the old Hanchett Swages, so that our old customers can avail themselves of this improvement by purchasing from us the new spring bracket.

When the swage is used upon a gang saw, a fork is furnished that has no forward projection, thus making it more convenient for swaging the last teeth at the lower end of the saw.

Hanchett Band Swage Shaper

For the obtaining of the most desirable results, the swage shaper has become an indispensable unit in the filing-room. The utility of the swage shaper for fitting band saws has been demonstrated for many years. The "Hanchett" Band Swage Shaper combines all the elements that go to make an ideal finish to the work of the saw swage. By the shaper every tooth is pressed into perfect shape, as in a mold, widest on face, widest at extreme points, tapering downward from the points and backward from the face, thus making a perfect shape and a perfect clearance. Added to this quality is that of making the shape of all the teeth absolutely uniform.

Let us send you our new 1909 Filing
Room Catalog No. 6. It will interest you.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

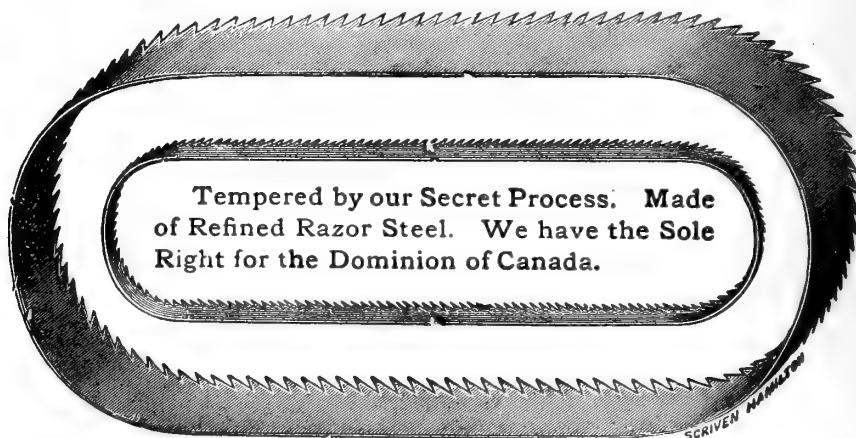

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

JUST OUT The New Waterous Band Mill

8 ft., 9 ft., 10 ft., Sizes—Single and Double Cutting

The latest most up-to-date mills on the market.

Upper guide of patented safety saw centre swing design adjustable vertically and horizontally. Is fitted with quick opening device; is water coated and non-breakable.

Upper guide arm raised and lowered by power mechanism.

Lower saw guide designed on same principle as upper to swing above centre of saw. Is quick opening and under control of tail Sawyer.

The product of our 50 years experience in saw-mill business.

Columns solid, rigid, giving wide range of adjustment to upper wheels.

Upper wheel raised and lowered by jack screws and gearing.

Tensioning device acts independently of position of upper wheel and removes all jar from saw by patented self-cushioning tension weights.

CUT of 8"—DOUBLE CUTTING.

Tilting Device Improved and Simplified.

Frame very Heavy and Extends Completely Around Mill.

Cross Lining Adjustments also Supplied.

PETERBORO SAW MILLS

Sawmill Machinery that has Run for Twenty Years Without Costing Anything for Repairs

A few days ago, one of our salesmen called on a sawmill man who was talking of putting in a new Jack Works and a Husk Frame.

“ Said the Millman: I am going to put in a Hamilton outfit, the same as———’s; he has had it in use for over twenty years and has never spent a cent on it.”

The best of such a statement is that it is true of more than one of our installations—other mills have had the same good results.

Surely machinery which will run season after season for more than twenty years without breaking down is good enough for anybody.

But—can you afford to buy machinery that is NOT built as well as that?

Nothing less than reliable machinery is of any use to you.

That’s the kind we make—the “ twenty-year ” kind, practically repair proof.

It is only with sturdy, properly built machinery that you can cut good lumber or run your business at a profit, and that’s the only kind we know anything about.

**Our Catalogues show everything for a Sawmill,
shall we send them to you?**

The Improved Hot Blast Grate

Style "B" for Mill Furnace

Developes more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one:—

Berridale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited,
Orillia.

Dear Srs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

"I Am Convinced
**Simonds
 Shingle
 Saws**
 Have Saved Me Money"

A man bought nine 40 inch Simonds Shingle Saws. He wanted the best and paid the price. He knows whether he won or lost on the deal. A careful record of Shingle Saw cost was kept, with the result that after a few months the record showed, in that mill, the saw cost per thousand shingles cut to be slightly less than one-half of one cent. About 9 cent saw cost for twenty thousand shingles. That is why this Millman said he was convinced Simonds Saws are *money makers* because they are *cost savers*. This is a statement of fact. We have the proofs and

will gladly show them. If you want low cost use the right saws—Saws made of Simonds Steel, made by Simonds Methods. Dollar for dollar value is given. A saw to sell for less money than the Simonds cannot be as good. It cannot run as economically, and it will not make the same profit for you in the long run. More shingles mean more money from the same block of wood.

For shingle saw prices and particulars, address our nearest office, giving size, number of teeth and gauge of saw desired.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 29

Toronto, July 15, 1909

No. 14

B. C. Lumbermen Support C. L. A.

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, has been visiting British Columbia recently in the interests of the Association, and has met with most encouraging success. The object of Mr. Hawkins' visit was to enlist the interest and support of the lumbermen of the West in the work of the Association and to persuade them to become members. He has been successful in obtaining a large number of new members. According to a press report, which is published elsewhere in this issue, he has secured as members "practically all the coast lumbermen." This will be welcome news to those in Ontario and eastern Canada who have been active in the organization of the Association and have done a great deal of the pioneer work in its formation. Some anxiety was felt at first as to the attitude which western lumbermen would adopt toward the new Association, as the interests of the West and the East have not always coincided with one another. Apparently the lumbermen of the West have taken a large view of the situation and have readily realized the great usefulness which the Association will have for them, as well as for all lumbermen in Canada.

The Canadian Lumbermen's Association will work hand in hand with existing local associations of lumbermen, and it is believed that its interests will not clash at all with the interests of others. Its main objects will be to look after the legislative interests of its members and to represent the lumber interests of Canada before such bodies as the Dominion Board of Railway Commissioners. Already it has done an important and successful work before the Railway Board, and the indications are that its field of usefulness will be greatly enlarged from time to time. In the United States similar associations have been in existence for some time and have established records of continually increasing usefulness. They have secured a better public appreciation of the interests of lum-

bermen and have assisted greatly in overcoming difficulties which could not be handled by local bodies.

There are so many questions which can be taken up by the Canadian Lumbermen's Association to the advantage of the lumbermen throughout the country that it is no wonder that the people of the West have been quick to recognize its value. With the increased influence afforded by the support of the West the Association should enjoy during the present year and in the years to come even greater success than the already large measure which it has secured through the activity and conscientious efforts of those who have done the work of organization. It is interesting in connection with this matter to note that Mr. Hawkins is impressed by the good prospects for improvement in the lumber business. In an interview he corroborated the views which have frequently been expressed of late by others who have had an opportunity of investigating conditions at first hand. He believes that there will be a rapid return of normal lumber prices as a result of the success of the crops on the prairies.

Market Conditions for Low Grades

The views of a number of manufacturers and users of box lumber in Ontario as to the conditions which prevail in the market for box lumber and boxes will be found in another part of this issue. They make interesting reading, especially because of their remarkable lack of unanimity, and also because, while all agree as to the dulness of the market at present, none agree entirely as to its cause or as to the probable outcome of the present conditions. There are one or two points, however, upon which most of them agree. The present dulness has continued for a year or more and has been coincident with the depression in general business conditions which commenced in 1907. Previous to 1907 the market for box lumber was extremely brisk. There was a good demand and prices soared. They soared so high that several substitutes took advantage of the situation and secured a much stronger hold upon public favor than they had previously enjoyed. While prices were so high manufacturers contracted a habit of producing all the lumber they could, a habit which has been difficult to correct. Its evil effects, in fact, are still felt.

There was nothing to worry about so long as prices remained high. When the change came, however, matters took on a different appearance. Manufacturers who had formerly had difficulty in filling all their orders found their trade dwindling rapidly and competition became very keen. Price cutting became common and before long the margin of profit had been wiped out. Conservative manufacturers then called a halt and refused to manufacture or sell at less than it cost them to produce, but, as is generally the case, some were found who, it is claimed, sought to retain their trade by carrying it on for the time being at a loss. This policy was based upon a mistaken idea that the depression in business was to be only of a fleeting nature, but now that it has lasted for the best part of two years the situation has become serious. At present there are three alternatives ahead. Trade may improve and do away naturally with the evils of price cutting and poor demand; price cutting may be done away with willingly by those who indulge in it, or it may continue, and credits may become so strained as to bring disaster to those who have been least conservative in their dealings. There is no necessity for the latter alternative to come to pass and there should be every incentive for manufacturers to persuade them to give up trying to force an unwilling public to buy.

The present is a time when one would expect reasonable men to do their utmost to pull together for the benefit of all concerned. With reasonable co-operation, manufacturers to-day should be able to secure enough business at fair rates to keep them all going along until business conditions improve. With price cutting, nobody can make money and somebody may lose a lot of it.

Aside from the difficulties which price cutting present, the manufacturers whose opinions have been sought took strangely different views of the present situation and its probable outcome. One believed that the fall would see some improvement. He thought nothing of the stories of the substitution of paper, fibre, yellow pine, gum spruce, etc., for white pine, and in this he was upheld by another, who declared that white pine was king so far as the box business was concerned. Another believed that white pine had lost business to paper which it would probably

never recover. One thought that the box manufacturing business would pick up in the fall, another thought it might do so, and a third believed that the price of white pine stumpage in Ontario had become so high that perhaps the days of profitable lumbering in Ontario had come to an end and the box-making industry, along with the lumbering industry, would dwindle unless the demand for lumber became great enough to make manufacturing profitable even at the present high cost of stumpage. He believed, however, that under the policy of selling timber berths to the highest bidder there would always be someone ignorant enough of actual conditions to bid more than a berth was worth and so keep matters pretty well in the same situation as they are to-day.

It is difficult to strike a happy mean between these extreme views, but there is reason to believe that the safest opinion to agree with to-day

is one on the side of optimism. General trade conditions are improving everywhere. Statistics show that manufacturing is increasing and that the demand for merchandise in general is increasing also. Coincident with such conditions as these the demand for lumber must improve. If more goods are to be manufactured there must be greater facilities for moving them. More freight cars must be built and more boxes must be manufactured. There is a fairly general opinion to-day that the lumber market has already improved considerably since the beginning of the present year. The turning point was apparently passed this spring, and though the full tide of prosperity may not be expected to flow until after another crop has been garnered and the tariff uncertainty in the United States has been removed, both these events seem about to come to pass within a short time.

Conventional Lengths Cause Large Waste of Lumber

The fact that great waste occurs in ordinary lumber manufacturing, because short and odd lengths and widths are not used has been mainly blamed on the lumberman. The truth is, however, that the lumberman is practically helpless. He can find a paying market only for the lumber cut from logs of regulation length, as called for by the builders and architects. If specifications were drawn for the sizes actually used, the short logs would be in demand, and the tremendous present waste due to this cause would be saved.

This fact has recently been brought out in connection with the study of forest utilization now being made by the United States Forest Service for the National Conservation Commission. One of the schedules of inquiry sent to lumber manufacturers contained a query as to the extent to which more careful specifications of material might reduce waste. Replies to this query show that in some cases as much as 25 per cent. of the felled trees are never hauled from the woods, simply because specifications cling to conventional lengths.

Thus, lumber in long lengths is frequently ordered for use in lengths of from one to six feet, and yet the short lengths, which would exactly and economically meet the requirements, cannot be sold. An example is the case of bevelled siding. "I have just taken a book issued by a prominent architect," writes the secretary of a prominent lumber association, "containing about 200 designs of houses, and on all of these designs, I believe that 40 per cent. of the siding on these houses is under six feet in length. At the same time, the contractor will order lengths of from 12 to 16 feet in order to build them."

"It has always been the custom to sell lumber in even lengths only, and our prices on lengths under ten feet in almost any material, are from

\$2 to \$10 per thousand less than for lengths above ten feet. In cutting any kind of finished product, such as flooring, ceiling, bevelled siding, etc., in order to grade the lumber in an economical manner, there is bound to be from 5 to 10 per cent. of the lengths under 10 feet long. It is the rule with most manufacturers to burn up all lengths under six feet, as there is absolutely no sale for them. While, on the other hand, the architect and the contractor order their lumber in long lengths with the idea of cutting it up into lengths from one to six feet when placing it on the building."

The same writer says that 10 or 20 foot lengths are commonly specified for the flooring of porches five feet wide. He concludes by making the following estimate of the waste occurring from this practice of disregarding the saving of waste in building specifications. "I think the waste in our timber products, caused by this one fact, which you will readily see, prohibits a man from going to the expense of taking any timber out of the woods that he might cut into these short lengths and find a market for, and which gives him no market for the short lengths that do accrue in the ordinary manufacture of logs in longer lengths, will easily run to 25 per cent. of the timber on any section of land."

It would be a great mistake to charge such waste as this to the voluntary device of the lumberman, who wastes only what he cannot use in his business. The closer drawing of specifications, with a better knowledge of the timber situation, and with more careful regard to the possible use of the short lengths now ignored would not only help the lumbermen to larger profits but greatly prolong the duration of the lumber supply.

Factory Inspectors Make Suggestions for Mill Owners

In the reports of the various factory inspectors of Ontario, for the year, mention is frequently made of the dangerous machines used in sawmills, and of the necessity for having them thoroughly guarded. Inspector R. Hungerford suggests that mill owners are either indifferent or ignorant of the law and fail to report the accidents happening in their mills. His recommendation is that the inspector should visit sawmills as frequently as possible. Mr. Hungerford's remarks on sawmills are as follows:

"Though I have seldom seen a report upon the subject of a sawmill, I have during my short experience as an inspector arrived at the conclusion that it should be rated among the important industrial institutions of the province—important because of the vast wealth involved, and the great number of citizens employed during the winter months in the lumber woods and in the mills during the summer.

"It may not be generally known to those having no interest in the lumber or sawmill industry, that we have many thriving little towns in the northern part of the province the male population of which are almost exclusively employed in sawmills, some mills employing in the neighborhood of 300 men.

"From the inspector's standpoint, the sawmill is of a very different character from that of other mills or factories. It is seldom, if ever, necessary to enquire very closely into the sanitary condition of a sawmill owing to the fact of their being almost without exception situated

on the shore of a healthy lake or river in a sparsely populated part of the northern country.

"Ventilation is another feature of the sawmill, which seldom requires the strict observation of the inspector, as in a very large percentage of the mills the employee is as well supplied with fresh air as if he were out in the middle of the lake.

"There is also the temporary character of the mill to be considered, being usually built where timber can be conveniently procured. When the timber in the locality becomes exhausted it becomes necessary in many cases to remove the mill back to the forest where timber is more plentiful. In consequence of this, the great majority of sawmills are of but a temporary character, and are not built with any view of permanency, as most other factories are.

"There is no mill or factory to my knowledge requiring more attention by the inspector than the sawmill, owing to the frequency of accidents and the great dangers in their operation. I feel perfectly safe in saying there are more accidents in sawmills than in any other factories or mills employing the same number of men. I may say that out of three fatal accidents reported in the district assigned to me within the past year all occurred in sawmills. Whether through indifference or ignorance of the law, it seems to be extremely difficult for us to get the mill owners to report accidents happening in their mills. In consequence it is not an easy task for us to form even a reasonable idea or publish an

accurate report of accidents happening in mills of this character.

"I have experienced some little trouble in sawmills owing to the employment of boys under fourteen years of age; or, rather in the lath mill, which is a part of every mill of any considerable size. The cutting of lath is generally given over to one man by contract, who, in his desire to make all the money possible, hires boys at a low rate of wages to perform some branches of the work, at which, it is said, they soon become quite expert and, in fact, just as useful as men. I have also found boys under the required age engaged in packing shingles, another adjunct to the lath mill.

"One of the most dangerous machines used in the sawmill is the gang edger, which, fortunately, is not in general use owing to the ex-

treme danger in its operation. They are, however, in use in some few mills, and should not be used without a guard. The great danger in the use of the gang edger is in the lumber jamming and catching on the top of the saws, and being thrown back with great violence, thus greatly endangering the lives of those operating it. A guard has been invented by a Peterboro man, which I have seen work, and I think it is a capital safeguard. This guard makes it impossible for the lumber to fly back, even though the saw catches it.

"Considering the tendency to work boys in mills, and realizing the necessity of guarding so much dangerous machinery, I would deem it advisable for the inspector to make his visits to sawmills as frequent as possible."

Improvement Indicated by Railroad Buying and Crop Reports

There is no need for lumbermen to wear rose colored glasses to obtain an encouraging view of the market situation to-day. There are always people who will not admit that things are looking brighter until they are dazzling, and whose delight is to discourse upon the troubles with which they are blessed. To-day there are many of this class left from the ranks of those who have felt the pinch of hard times during the last year or more. The chronic grumbler has had a long innings, but the indications are that he will soon be bowled out. He must even now be feeling nervous when he considers the crop reports which are coming in from all parts of the country. Last year's crop was a good one and furnished the foundation for the return of prosperity which a good crop this year is certain to bring. Up to date the crop reports have been of the most promising nature. Larger areas under cultivation and an abundant yield are indicated from practically every point. Farmers at present are securing unusually high prices for their products and farming has become one of the most profitable of employments. New settlers are going into the Canadian prairies and into the United States southwest by train-loads. Farmers who have already become settled are showing their faith in the prosperity of the country by completing the long-delayed arrangements for new houses and barns. The farmer and the business man of Canada have awakened once more to the great opportunities which lie before them, and when the country is in full realization of these there is no telling how great its achievements will be.

In addition to the good crop reports there is another indication which is just as certain a barometer of the state of trade. The railways have again come into the market with their demands for lumber and equipment of all kinds. When the railroads commence to buy, lumbermen know that there is good reason for confidence. The stoppage of railroad purchases is a storm signal and the wise ones lose no time in taking cover. The large United States railroads commenced to make enquiries a couple of months ago and to-day they are making purchases. Canadian railroads are not so important a factor of this sort as those in the States because they are in the habit of keeping their equipment in better condi-

tion and not allowing it to be neglected so much in dull times. The United States railroads stop their purchases almost entirely on the first sign of business depression.

The appearance of the United States railroads on the market as buyers has had a splendid effect upon lumber in the United States and the improvement was also quickly felt in Canada. The situation as viewed by the "American Lumberman" is briefly expressed in the following language: "Signs of returning activity are everywhere, and are marked in such plain figures that those who run may read. The best evidence of this is found in the increased activity in the railroad purchasing departments. Practically all of the important equipment companies report that May brought them better business than they have had in twelve months. The first signs of improvement became perceptible in April, and in May the long looked for equipment buying by railroads developed to such an extent that in some cases plants that had been long idle had to be reopened and new men employed to meet the increased business. This does not mean that business has improved to anywhere near the level of the prosperous year 1907, but, compared with the period of idleness last summer and fall, is an encouraging gain. The present operation of large companies is said to represent gains of from 20 to 50 per cent. over the low mark last year.

"Equipment company officials predict a continued improvement. They emphasize the fact that not since early last year until in June have the railroads bought either cars or locomotives to an extent worth considering and that they must eventually come into the market to renew rolling stock that has meantime deteriorated or "died." That the railroad companies are already beginning to do this is already evidenced by the number of fairly large orders for passenger and freight cars that have recently been reported. The best buying of equipment thus far has come from the Harriman lines and the Pennsylvania and Gould roads. The fact that these important interests were the first in the market is taken in equipment circles as significant of full confidence that the country is on the eve of a period of great prosperity."

British Columbia Loggers Again Want to Export Surplus

A movement is on foot to persuade the Provincial Government to suspend again the law which prohibits the export of cedar logs from British Columbia. Last year the Government suspended the operation of the law for a limited period, to afford those who could not dispose of their cedar locally an opportunity to do so across the line, so as to get rid of second and third grade logs which could not be sold in British Columbia. It has not been the intention of the Government, however, to let the United States deplete our forests of the cedar we can use ourselves. It is claimed now that cedar logs have been accumulating, and that there are now 50,000,000 feet in the water, which will nearly all be lost unless they are shipped across the line.

Some will ask, however, why, in the face of the prohibitive law, loggers should continue to cut cedar logs until they glut the market? The question has two sides. On Puget Sound cedar is not so plentiful as in British Columbia, and if the mills on the Sound, protected with an exclusive tariff on shingles, can get our logs, they can turn them into shingles and keep our shingles out of the United States market. Many lumbermen believe that the British Columbia law against the export of cedar logs should not be suspended at this juncture at any rate, particularly in the face of the aggressive policy of the United States authorities in proposing to increase the tariff on Canadian shingles from 30 to 50 cents a thousand.

During the month of April the products of the forest imported into Canada amounted in value to \$522,922. The exports of domestic forest products were valued at \$1,642,465, against \$1,579,794 in April, 1908, and \$1,618,714 in April, 1907.

A movement is on foot, promoted by the London, Ont., Board of Trade, for the holding of a conference of expert representatives, conversant with the inspection and construction of all kinds of boilers, to formulate a boiler inspection act for uniform use all over the Dominion.

Box and Low Grade Lumber Markets

Widely Different Views Held by Various Manufacturers and Consumers—The Substitution of Paper, etc.—The Price Cutting Evil—Is Ontario Stumpage Too High?

The low prices which have prevailed for box and other low grades of lumber products in Ontario during the last year or two, have assisted in bringing about an unpleasant situation at present. One hears from manufacturers and dealers frequent reference to low prices, overproduction, competition of substitutes, etc., which it is difficult to harmonize entirely with the more optimistic views taken by other manufacturers and dealers. With a view to presenting the situation as viewed by different eyes, opinions were recently sought by the "Canada Lumberman" from a number of manufacturers, dealers and users of box lumber, the chief of which are published herewith. The "Canada Lumberman" would be pleased to publish the views of others upon this question or upon any other question of importance to its readers.

The manager of a large firm of manufacturers and users of box lumber stated that their business was improving and the demand had increased for all classes of mill culls and box and common shorts. Consumers of boxes appeared to be using more boxes than they had for a year past. The improvement had commenced to be noticeable about the first of June and the indications were that it would continue. Prices were steady and fairly good. In discussing the conditions which had led to the long continued depression in the market for box lumber, he assigned it to a large extent to the falling off of the demand for bacon boxes for export. For the last eight or twelve months bacon had been so high in price in Canada that the export had dwindled to practically nil. The bacon exported went largely in boxes, while domestic sales were made to a great extent in bags. He believed that with a return of general business activity it was almost certain that the demand for boxes would increase and the low grade lumber would feel the benefit. He did not expect any decided improvement in price at present or for some time to come, but thought that the improved demand would result in the large stocks of low grade lumber being more easily disposed of.

"Trade is not picking up much," stated another box manufacturer, "but the prices for box lumber are not so low as I expected. This is not because of any strength in the demand, but rather because the lumber is in the hands of those who can afford to hold it until better prices prevail. You can form some idea of the conditions so far as we are concerned, from the size of our staff. We can handle our business at present with a much smaller staff than we used to employ."

Better Prices in the Fall for Low Grades.

One of the largest firms of box lumber producers in Ontario, who are also manufacturers of box shooks, took a much more pleasant view of the situation than others. The trade was not any worse than it had been, anyway, their manager in Toronto stated. As to the demand, the Southern pine was coming in in such large quantities as to take away a great deal of the trade from Ontario white pine, but white pine was still "king," and those who could buy it at reasonable figures never failed to specify it. It was easy to account for the depression in the market which had been prevalent for so long, and which, however, was disappearing. The main reason was the general stagnation which the business world at large had gone through. The stagnation had now largely passed away. The demand for box lumber on both sides of the international boundary was increasing. The fruit trade was using a greater number of packages now than it had formerly, and box business on both sides of the line was greater than it had been at this time last year. "The glass factories also are now in the market," he stated, "and I see here and there signs which make things look very hopeful. On the other hand, I have to admit readily that there are no sales being made at any advanced prices. There are not two buyers for every lot of stock, nothing of that sort. The only thing that I base my views on is the general improvement in business which has taken place since the spring. I received an order this morning from one of the railroads for quite a good bill of stuff. It happened to be an order for hemlock, and did not affect the low grade lumber market to any extent, but it showed that the railroads were again in the market for lumber. As soon as the railroads begin to buy, Southern pine and other classes of lumber begin to move more freely. I think the general tone of the market is better. That is all I say. As to the box business to-day, there is not a dollar to be made in it, but business will soon improve."

"The stocks of low grade lumber on the Georgian bay are pretty heavy but there is a greater percentage of mill culls in them than there was some years ago. For this reason the actual amount of stock should not be compared with former quantities. However, the amount of stocks must be out of balance with normal conditions, because the demand to-day is mostly for common and better white pine. The demand for these grades is good, but for the mill culls there is no demand."

"I am inclined to believe that late fall sales of low grades will show an advance, but that midsummer sales will be on the present basis. The white pine box situation has more of promise in it now than it has had at any time in the last six months. The demand of the railroads is the key to the whole situation. Other consumers keep on buying most of the time, though perhaps to a limited extent only, but when stagnation sets in, the railroads shut off their purchases entirely. Their appearance in the market at the present time is the most hopeful sign to be found."

"With any reasonable resumption of business, stocks will clear away all right. We are not in the doldrums by any means. We are simply just in the balance. We are doing a fair amount of business. So is everyone else. All we need is a little of that ginger which puts snap into business and makes pleasure of it. At present there is no money in the business for anybody."

"This bugbear about substitutes such as Southern pine is hardly worth bothering about. It has been with us for many years and will probably remain, but in spite of it white pine is still king."

No Immediate Improvement Expected.

A rather different view of the situation was taken by the manager of another large firm of manufacturers and users of box and low grade lumber. In spite of the improvement in the demand for the better grades of lumber which had been noticeable during the last two or three weeks, the market in general, he believed, had a number of unsatisfactory features which were causing uncertainty and anxiety to manufacturers and dealers. The prices of low grade lumber in Ontario, especially box lumber, were low and the market very dull. The low grade business was entirely of the hand to mouth character and the manufacturers in the Georgian bay district who had been accumulating stocks for almost two years, were in such a position now that they seem inclined to do almost anything rather than to increase their stocks still further. They were looking to the box manufacturers for some relief, as this was their busy season. Box manufacturers, however, were in almost as unpleasant a situation as the manufacturers of box lumber.

When the prices of pine stocks went up so high two years ago in Ontario, box manufacturers naturally sought for substitutes, he said. These were found in gum, yellow pine, spruce, etc., and the United States demand for Ontario pine stocks, as well as the Ontario demand, fell off greatly. At the same time users of boxes found substitutes for the wooden articles when the high price of white pine stock sent up the price for boxes. Paper boxes came into use and in some cases largely took the place of the wooden articles. In one instance a consumer of 10,000,000 feet of box lumber found that for 3,000,000 feet, paper could be used profitably as a substitute. The paper proved satisfactory and its use would probably be continued. This large business had been entirely lost to the makers of wooden boxes, and the same had been the case in other instances.

Although the prices of box lumber had fallen off largely during the last two years, box manufacturers had been unable to take advantage of them for anything except a hand-to-mouth business. Some manufacturers of box lumber had been trying to make sales in large quantities by offering special inducements, but the box manufacturers could not afford to stock up with material, in the face of poor demand and the strong competition of successful substitutes. Manufacturers of box lumber, however, seemed to be expecting an advance in prices. They argued that the settlement of the United States tariff, which was now in sight, and the general improvement in business throughout the country, would do a great deal towards bringing about a better demand for the low grades of lumber. Some of them were reported to be holding out firmly in the expectation of better prices in the immediate future. It was difficult to see, however, that they had any really strong reason for counting upon this betterment in the face of the depression of the box industry.

With returning business activity it was natural to expect that the demand for lumber would improve, but the situation in regard to low grade lumber in Ontario contained factors which rendered the matter of improvement quite problematical. The substitution of yellow pine, gum, spruce, etc., for Ontario white pine had been so general, that one could not help believing it would be difficult to oust the substitutes from the market. A large amount of the trade which formerly came to the producers of Ontario white pine culls would now go to the substitutes. This would probably prevent a complete restoration of the conditions which formerly prevailed.

There was still another factor which was peculiar to Ontario. The cost of lumbering in Ontario had been increased artificially by the Ontario Government to such an extent that it was questionable whether the days

when fortunes could be made out of Ontario lumber were not entirely in the past. The charges made by the Ontario Government were so arranged that the cost of a permit to cut lumber was now so great that it could seldom pay those who bought a berth, to work it. As an instance of this, the recent sale of No. 2 berth of the Dokis Indian Reserve was interesting. The price paid for the berth was \$64,700. This was a Dominion Government sale, but the same thing applied to it, and he believed that the purchasers would be unable to make any money out of the berth. Whatever the ultimate effect of the high cost of lumbering in Ontario might be, in the way of preserving the timber supply, the immediate effect was that the cost of producing lumber in Ontario was growing rapidly, while at the same time competition from other sources, and general business depression, had conspired to make lumber manufacturers question seriously how long they would be able to stand the strain.

To come back to the original question, it became increasingly difficult to understand how one could expect, at present, any decided betterment in the prices of low grade lumber in Ontario. Many things would have to occur before it could be brought about. The substitutes would have to be cut out of the market. The United States demand would have to pick up greatly. Large accumulations of stock at the mills would have to be sold, and the tariff uncertainty would have to be settled. These things might all happen, but the chances were against them.

Price Cutting the Real Cause of Trouble.

"Lumber is holding its own pretty well," said the manager of another company who manufacture and use box lumber. "From the box maker's point of view it would have been better, however, if it had kept up at the figures of 1907. When lumber dropped \$1 a thousand the users of boxes immediately thought there ought to be a drop in the price of boxes. The amount of lumber in a box is so small that in order to make any reduction at all the decrease had to be about \$4 or \$5 a thousand.

"The demand for boxes is better than it was at this time last year, but there are more factories to turn them out and the capacity has been greatly increased. There are so many new ones in the business that some of the older factories are not running more than 50 per cent. of their capacity. It looks now as though there will be no improvement in prices until some of the weaker manufacturers have been obliged to go out of business.

"There is not any too much dry stock offering. If there is any offering a man should be very careful about buying it, and see what is the matter with it. It may be, however, that it is all right and that the owners may have to move it so as to make room for new stock.

"All this talk about white pine being depressed because of the competition of substitutes such as paper, fibre, etc., is wide of the mark. There is no substitute for white pine. The substitution talk is simply an argument to help make something for nothing by putting prices down. The railroads will soon get tired of carrying that stuff, as they have to pay so much more upon claims made for damages to the stock carried in paper packages. On the other side people who receive their stuff in these bad packages are complaining greatly. I think we are following suit too much. It is partly the consumers' fault for not being more particular about the condition of the package when he receives it, and it is partly the fault of the manufacturer for taking too much notice of the customer who wants lower prices, and producing thinner packages to meet competition.

"The quality of lumber we are putting into boxes to-day is better than it has ever been. This is because of the low price of mill run which we are using now. The culls from which we used to make boxes contain a much greater amount of waste than the mill run.

"In three or four weeks I expect that the canned goods factories will be opening up again and will be needing many boxes. I do not know what the canners are going to pack this year, though I am inclined to think that they are carrying a heavy stock in the warehouses, heavier than the public are aware of. I am told that they have not made contracts with the farmers as yet to any great extent. This would make it look as though they might need fewer boxes than usual. There will be lots of small fruit, however, I think.

"According to the Customs receipts and the railroad reports, business is increasing generally and if the people in our business were sane there would be more money in it. There has been far too much price cutting. Some big manufacturers are selling below cost and a number of small ones have been doing the same. I know of contracts which we figured on and which were filled by others at prices 25 per cent. less. The prices we offered were as close to cost as anyone could get. If these people would put a cost system of accounting in operation they would see that they are losing money and the matter would be fixed, as no one ever wants to give away something for nothing."

The Board of Railway Commissioners has made an order disallowing certain advances in Supplement 1 to Canadian Classification 14, as follows: It was proposed to advance the ratings on joiners' work in carloads from sixth to fifth class, and to increase the minimum carload weight on hoops from 24,000 to 30,000 pounds. Some of the changes were serious, representing a considerable advance in rates.

Gum Manufacturers Will Curtail

Decision Reached at General Meeting—Campaign Proposed for Stopping Competition of Paper Boxes

The manufacturers of gum lumber in the United States who are credited with having done much to injure the market for low grade white pine products, seem to have gained little or nothing by the forcing of their product upon the market. At a meeting held recently at Memphis, Tenn., the unsatisfactory condition of the market was freely discussed and many speakers declared that they were not obtaining for their product the cost of labor, to say nothing of the price of the stumpage. In this, they are on a par with the producers of many other classes of low grade lumber, and although it is not a matter to rejoice about, it is a pleasant thing for the producers of Canadian white pine to learn that the producers of one of the most important substitutes for white pine have at last looked the situation squarely in the face and decided to seek an immediate remedy by way of the curtailment route.

The meeting referred to was largely attended and the most important address was one delivered by Mr. R. M. Carrier, president of the Hardwood Manufacturers' Association of the United States. Mr. Carrier said that the meeting had been called for the purpose of seeing if something could not be done for the betterment of the gum market. They were confronted, not by a theory but by a condition, and a bad one at that. Their object was to determine whether the product they placed on the market netted them more or less than it actually cost to put it on sticks. He was of opinion that they were not making money, and he especially urged all of the manufacturers of gum lumber to cease cutting their gum stumpage as much as possible until gum lumber should have reached a price which would net a legitimate profit. Gum stumpage was very valuable and it was only a question of a short time until this value could be obtained. Already a number of plants had stopped cutting gum or would do so in the very near future. Among them were the following: Three States Lumber Company; Lamb-Fish Lumber Company; Houston Brother's; Knott Lumber Company, and the Carrier Lumber & Manufacturing Company.

"There is another point I wish to take up," said Mr. Carrier, "and that is the substitution of paper boxes where wood was formerly used. This is something which is badly affecting the low grade lumber market, which product is sold very largely to the box manufacturer or made into shocks by ourselves. We should do everything in our power to stop this substitution. Those of us who run commissaries in connection with our other business should absolutely refuse to accept goods packed in paper boxes (except small cartons).

"Your wholesale merchant will tell you that he has not these goods on hand packed in wood. That is just what we want. Refuse to buy them at all, and he will soon get them packed the way you wish. Ask your friends, the grocerymen, to demand wooden packages, show them where it is impossible to use a paper box over again, and that the goods are very frequently damaged in shipping. It is my intention to have our local paper publish an article upon this subject in an effort to show the local grocerymen how it will be to their advantage to receive goods packed only in wood, and in addition to the reasons pointed out, I will show to him that every time he receives a paper package, he is crippling a home industry, our box factory and plant in general, and, therefore, directly crippling himself. You should also go among your railroad friends and show them why they should raise the classification on goods shipped in paper. Show them where they lose freight, not only on the lumber to make the boxes, but on the weight of the boxes themselves when packed. If all of the lumbermen will do this, it is bound to cause an increased demand for low grade lumber.

Mr. Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, also addressed the meeting. He stated that the gum lumber business was in a disastrous condition at present. A number of people who tried to hold their lumber until the market improved, found that the lumber perished while on the stick and became unmarketable. The only plan which would improve the conditions was to shut down the mills until a natural consumption again prevailed. Box makers stated that there had been in the last year a loss of nearly 40 per cent of business as a result of the substitution of paper, fibre and pulp board in the making of boxes. In advocating a policy of purchasing only goods done up in wooden boxes Mr. Doster said that four reasons for the good of the storekeeper could be given for this policy, as follows: (1) The country storekeeper can use these boxes again for reshipping purchases in the outlying districts of his locality; (2) The storekeeper of more inhabited localities save their boxes and sell them or use them for reshipping purchases, giving them a cash income which they cannot receive from the paper or pulpwood boxes; (3) They are received by merchants in much better shape than those shipped in paper or pulpwood; (4) The wooden boxes resist dampness and you all know how paper will soften when placed in such condition.

Resolutions following out the suggestions of the speakers were adopted by the meeting.

Ontario's Timber Statistics for 1908

Revenue from Timber Dues—The Largest in the History of the Province—The Forest Reserves and the Fire Problem.

The annual report of the Minister of Lands, Forests and Mines of Ontario, for the year 1908, has just been published. The report, regarding woods and forests, is in part as follows:

"The total revenue from woods and forests was \$1,786,338.99, consisting of bonue, \$100,879.39; timber dues, \$1,618,242.58; ground rent, \$65,150.87; transfer fees, \$2,066.15. The revenue from timber dues was the largest in the history of the province. Of this amount, however, \$496,000 accrued during 1907, but owing to financial stringency, payment was not enforced during that year. The collections proper for 1908 were \$1,224,243, and we carried forward into 1909 \$235,368, owing to inability of lumbermen to pay. In the history of the department it has never been the practice to insist upon payments being made if the parties

ing the dry period, many of them reckless and careless as to the danger of leaving fires burning when they move camp, etc. The ideal state would be to keep everybody out of the forest, allowing no burning by settlers for clearing land during the summer months, etc., and that is what some people think should be done. Practically, this cannot be done; in the very nature of things, it would stop the clearing up of the lands for farming, create bad feeling and lead to the setting out of fires with malice, which can be easily done without discovery in an immense forest area. The ideal state being unattainable, practical efforts have been made to improve the situation, and the belief of the department is that a sound public opinion has been created upon this question among the denizens of the forests, that consequently forest fires are neither so fre-

Statement of Timber and Amounts accrued from Timber Dues, Ground Rent and Bonus during the year ending 31st December, 1908.

were shown to be in circumstances where the enforcement would ruin them. They were extended every leniency if the security was sufficient, interest at the rate of six per cent. per annum being charged on all balances unpaid at the end of the year. The situation of the lumber trade has slowly improved during the past year, and the recent stringency would seem to be passing away. One effect of the stringency of last year has been the curtailment of the output of the present winter, as from reports received the output of this year will be very much below that of last."

After outlining the measures which have been taken by the Government to preserve the forests from fire, the report says:

"The department is always pleased to receive suggestions as to the improvement of this service, and to give consideration to whatever appears desirable for that purpose. The only recent suggestions of any importance have been that the number of men should be increased, and that their pay should be added to. The department considers that the territory is pretty well guarded now, except, perhaps, in a few dangerous localities, as to which special action can be taken, and as to the increased remuneration, the department feels that it should be undertaken by the parties receiving the largest proportion of benefit from the service, that is the timber licensees.

"Of course, forest fires have occurred in spite of all the care and efforts we have made to prevent them. It is impossible to watch every one of the thousands of people who are wandering through the forest dur-

quent nor so disastrous as they used to be, and that the situation is yearly improving. The system has never been regarded as perfect, and we are consequently frequently inquiring of those experienced in such matters as to suggestions whereby the system can be made more effective. Last year we had some serious fires, but no great losses took place; where the timber was damaged we were able to offer it for sale before it became a loss. The reports we have received from timber licensees do not show any serious loss on licensed lands, and where the damage has occurred, they too, having prompt reports from the fire rangers, were able to arrange to cut the damaged timber before it went to waste.

"On licensed territory we had last year 376 men, at a cost of \$46,621.45; on railways, 147 men, at a cost of \$53,236.71; on lands of the Crown, 58 rangers, at a cost of \$17,398.52. Then, the licensees paid an equal amount to ours for rangers on licensed lands, viz., \$46,621.45. On forest reserves we had 111 men, costing \$45,805.18, so that there were on duty as fire rangers in the forest during the summer months, 692 men, at a cost of \$209,682.29."

The report also deals with the parks and reserves which have been established in areas which are valuable for their pine timber. In dealing with these the report says in part:—

"The first park established in the province was the Algonquin Park. At the time it was established, the territory covered by it was all under timber license, part of it for the cutting of all kinds of timber and part of it for the cutting of pine timber only. A careful inspection was made

The Development of Prince Rupert

A Lumberman's Views of the Embryo City—An Important Market for Lumber

of this territory, and finding it was unsuitable for agricultural purposes, contained a network of rivers and lakes, covered the head waters of seven or eight important streams, it was felt that it would be a public benefit to withdraw it from settlement, put a staff of rangers in it in order to protect it from trespass and fire, as well as to preserve the game, and as far as possible keep it in a state of nature. In this park we have a chief ranger with a staff of rangers under him to prevent fire and trespass. The area of this park is 1,216,000 acres.

"Rondeau Park is a small park containing about 5,000 acres. It is situated in one of the garden counties of Ontario, the county of Kent, on the shores of Lake Erie. Here are to be found specimens of all the ancient forest trees of Ontario, which it is almost impossible to find in any other locality.

"The Temagami Forest Reserve, the most important in the province, contains a large quantity of pine timber, which has been estimated at from three to four billions of feet. The pine timber is of good quality, and easily lumbered, part of it can be driven down to Ottawa city, and also to the Georgian bay or Lake Huron. It is being blocked out by surveys, and the quantity of timber on these blocks is being estimated from year to year for the purpose of ascertaining with closeness the actual quantity of timber there is in the reserve. There is a chief ranger in charge of this reserve, who had under him last year a staff of seventy rangers, at a cost of \$30,000. There were no serious fires in the reserve although in the vicinity of Gowganda lake there was a fire that did some damage. The quantity of timber was estimated and offered for sale and was sold for \$18 a thousand bonus, in addition to the Crown dues of \$2. This reserve has been carefully protected, but it is the subject of a good deal of anxiety just now. The pine timber is growing on the surface, and beneath it there are silver mines. Thousands of prospectors have gone in there, which will render a large increase in the ranging staff necessary. The area of this reserve is 3,563,600 acres.

"The Nipigon Reserve has an area of 4,670,080 acres. There is a considerable body of pine in this reserve, but it was to protect the spruce and pulpwood growing on this area and to preserve the game and fish that it was primarily set apart. Here there is a chief ranger with a staff under him. Owing to the construction of the Transcontinental Railway, there is a continual stream of travel through this reserve, as the line of construction runs through the north end of it. There have been some fires during the year, but none have done any serious damage. Twenty-two rangers were on duty there last year at a cost of about \$9,000.

"Thunder Cape Reserve is a small reserve, eighty miles in extent, which was set apart to protect the timber on the promontory called Thunder Cape. The Crown Timber Agent at Port Arthur is in charge of this reserve.

"The Mississauga Reserve is situated on the tributary to the Mississauga river, which flows into the Georgian bay of Lake Huron. This reserve contains 1,920,000 acres. The quantity of pine timber on this reserve is estimated at from three to four billions of feet. There is no settlement or mining in this vicinity, and therefore it is reasonably safe from fire. The department is also blocking this reserve out by survey and estimating the blocks so as to get an accurate idea of the quantity of pine timber in it. We had a supervising ranger and staff of twenty-two rangers under him on duty in this reserve last year at a cost of about \$7,600.

"There is a large block of timber lying on the Quetico river, in the Rainy River district, which it is under contemplation to create into a forest reserve. The estimated quantity of timber on this area is about one and a half billions of feet."

Canada's ability to build ships should be given close attention by the Dominion Government if it intends to launch out upon a naval programme. The indications are that the Government has such a plan under consideration, and if it is to be adopted, the Canadian shipbuilding industry should be given an opportunity to handle the construction end of the programme. The resources of Canada equip the country splendidly for the establishment of an enormous shipbuilding industry. At Victoria, Collingwood, Toronto, Montreal, Halifax and other places, a good start has already been made and successful shipbuilding plants have been in operation for some time. The shipping interests of Canada, moreover, have obtained large proportions and are greatly in need of better facilities for repair work. These considerations should weigh heavily with the Government in persuading them, if they go in for a naval programme, to have the ships built in Canada.

The new transcontinental tariff naming class and commodity rates by railway from points in eastern Canada to north Pacific coast terminals, which became effective on June 1, 1909, contains advances corresponding with those which went into effect from eastern United States points on January 1, 1909. Being uniform, they place the eastern Canadian and United States manufacturer in the same relative position as before. The fact of advances having been made from shipping points in the United States is not considered by shippers in Canada as sufficient reason for advancing rates in Canada, and unless some additional reason is given as justification, steps may be taken to oppose the change.

As the Pacific coast terminal of Canada's new transcontinental railroad—the Grand Trunk Pacific—is bulking large in the public eye just now, many of our readers will be interested in the following account of an interview with Mr. C. H. Gillis, of the firm of C. H. Gillis & Company, wholesale lumber and builder's supplies, of Vancouver. Mr. Gillis, who has visited Prince Rupert several times on business connected with the recent establishment of a branch office and warehouse at that point, expressed himself to a representative of the "Canada Lumberman" in part as follows:

"The 550-mile run north was made on the steamer Princess May, of the C.P.R. line, a fast vessel with first-class accommodation. I was impressed with the fine harbor facilities, but, speaking frankly, I experienced a deep feeling of disappointment on viewing the townsite for the first time, and further acquaintance but confirmed my first impression. Possibly no other harbor on that part of the coast offered equal facilities from a shipping point of view—at any rate, the reasons impelling the choice must have been weighty indeed to offset in the minds of the promoters the many and serious disadvantages which become apparent to the visitor upon the most cursory inspection of the site chosen for the great city which we are told is to spring into being in the near future.

"At the present time Prince Rupert may be classed merely as a typical western town. True, the wharfage accommodation is better than might be expected, and there are several first-class buildings, but, eliminating these features and the somewhat pretensions plank roadways—constructed on piles sunk deep into the morass beneath in order to give solidity and evenness not otherwise obtainable—the heterogeneous collection of shacks and tents scattered here and there wherever a bit of solid ground could be pre-empted, would suffice to stamp the place as a town in embryo.

"The boundaries of the new city, as mapped out, embrace an area of about 2,000 acres. Centre street, the main thoroughfare, runs up from the new dock, and comprises the present business section. Knoxville, where most of the squatters are to be found, is a motley collection of shacks occupied by working men and cider vendors.

"The situation of the town site, and the soil characteristics, are bound to prove serious obstacles to rapid development. No doubt Prince Rupert will be a city some day, but a great deal of work will be involved, and the cost of levelling some of the lots by filling in the morasses and blasting away the rock found everywhere, will be a large item.

"Now for something of a more cheering trend. From the viewpoint of picturesqueness there is no fault to be found with Prince Rupert's location on Kaien Island. Majestic mountains bound the view on all sides, while the water vistas are a delight to the souls of all lovers of the beautiful. From a sanitary point of view also, there is nothing to be desired. Over \$800,000 has already been expended on the clearing of the townsite, the construction of streets and roads, and the installation of water and sewerage systems by the Provincial Government, the work being done in the most thorough manner. Visitors need not dread any deprivation of material comforts, as the hotel accommodation and cuisine are first-class.

"The climate is a vexing problem. I was shown a diary kept for two years by a resident, and a glance over its pages led me to conclude that the rainfall is heavy. On the other hand, the Grand Trunk Pacific Company's comparative weather report as between Vancouver and Prince Rupert is distinctly favorable to the latter. The consensus of opinion, however, would appear to indicate that Vancouver has many inches less rainfall annually.

"The company are pushing the construction of the line from Prince Rupert to Hazelton, and when this is completed a most dangerous stretch of river navigation, from Port Essington up the Skeena, will be done away with, and the carriage of supplies thereby greatly facilitated. But there remains about 400 miles of difficult mountain construction as yet practically untouched, and this will take time. In my opinion, at least, four years must elapse before the first G. T. P. transcontinental train passes over the bridge which will connect Kaien Island with the mainland.

"You might add that a most hopeful spirit animates every business man and resident of Prince Rupert. They have no fears for the future of the city, and are planning big things. The decision of the owners of the townsite to withhold from sale a number of lots in each block is regarded as a hardship, the object, no doubt, being to scatter the buildings over a wider area and at the same time impart to the reserved lots an added value in the way of unearned increment.

"Most of the rough lumber required for building will be furnished by nearby mills, but finished stuff and all other supplies will be ordered through Vancouver and Victoria dealers, who are bound to benefit very largely by the upbuilding of the new western city."

British Columbia News

A Secretary Enrolling Western Members.

The following despatch from Nelson, B.C., will prove interesting to members of the Canadian Lumbermen's Association: "Indications point to a rapid return of normal lumber prices. The success of the crops in the prairies is now practically assured and a good year in the wheat belt cannot but result in a very large increase in building operations. This statement was made yesterday to a representative of 'The Daily News' by Frank Hawkins, secretary of the Canadian Lumbermen's Association at Ottawa, when asked as to the prospect for an increase in the present prices of lumber.

"Mr. Hawkins is in British Columbia for the purpose of gaining additional members for the Association, of which he is the representative, and which was formed less than twelve months ago. He has already visited Vancouver and other coast cities and been successful in obtaining as members practically all the coast lumbermen. With regard to the objects of the Canadian Lumbermen's Association Mr. Hawkins explained that its function was not to in any way interfere with the existing organizations, such as the Mountain Lumber Manufacturers' Association, but to assist them in obtaining such modifications of proposed or existing statutes as thought advisable, in making applications before the Railway Commission and in many other ways too numerous to be mentioned. It had been thought that although the smaller organizations for the protection and assistance of the lumbermen were doing excellent work, they could be considerably strengthened by some such association as that represented by Mr. Hawkins, which could act with the moral effect of the whole lumber interests of Canada behind it.

"One of the questions already taken up by the new Association was that of the freight rates in Quebec and Ontario. This case has been described as being one of the most important ever brought before the Railway Commission, and, if successful, is likely to have the most far-reaching effects, and Mr. Hawkins stated that he had every reason to believe that the Association would win out. It was for such work as this that it was formed. Every year the new Association will hold a huge banquet at Ottawa to which will be invited members from all parts of the Dominion, and also a number of railway men and others interested in the industry. It is thought that such occasions as this will do much to both foster the business and bring the lumbermen themselves into closer and more friendly relations."

Personal Mention.

Mr. Roland D. Craig, secretary of the Adams-Powell Lumber Company, Vancouver, has been making a trip through the firm's limits "up country" for the past three weeks.

Mr. James A. Moore, of Seattle, president of the Irondale Steel Company, was in Vancouver recently. He intimated that he might start a large iron and steel works in Vancouver and develop the deposits of iron on Quatsino Sound.

Count von Faber Castell, owner of the world famous manufactory in Austria, was in Vancouver recently. He is on a tour of the world, studying markets and methods affecting his business. The Count is accompanied on his trip by his general manager.

Mr. F. W. Kelsall, of the staff of the Wattsburg Lumber Company, British Columbia, has a delightful holiday trip ahead of him, having captured first place in a "Free Trip to the Old Country" subscription competition launched by the London "Overseas Daily Mail." Mr. Kelsall will receive a cheque for twenty-five pounds and a first-class passage to and from the old land.

August Blum, vice-president of the First National Bank, Chicago; H. Von Der Weyer, cashier of the National German Bank of St. Paul, and W. H. Bucholz, cashier of the Omaha National Bank, visited Vancouver recently and expressed themselves as delighted with the city and its location, and impressed by the evidences of rapid growth in size and volume of business transacted.

Inspector E. A. Pelletier, of the Royal Northwest Mounted Police, spent a few days in Vancouver early in June, being on his way back to Regina from White Horse, Yukon, where he spent a holiday. The inspector, while in conversation with the "Canada Lumberman" representative on the subject of his thousand miles overland trip to Hudson Bay last year, said it was a mistake to imagine that the timber in that part of the Dominion was valueless—the pulpwood alone would satisfy all possible demands for a couple of centuries.

Mr. Manuel T. Tellez, late Mexican consul at San Antonio, Texas, has been appointed by the Mexican Government to take charge of its first official consulate in Canada. Vancouver has been selected as the consular point. Mr. Tellez is a firm believer in the trade possibilities between British Columbia and Mexico by way of the Canadian-Mexican steamship line and the Tehuantepec Railway across the isthmus, owned

and controlled by the Mexican Government. In his opinion, there will always be plenty of freight offering for the reason that even with the canal in operation the railway route will be three days shorter, and will thus attract all perishable goods.

Lumber Charters more Numerous.

Lumber chartering has been somewhat more active during the past fortnight, although freights are not firm. To Guaymas and other Mexican ports the rate has been dropped from \$5.50 to \$5, and the same is true of Hawaiian Islands ports and Santa Rosalie, Cal.

The barque "Springbank," Captain Royal, arrived at Hastings Mill on June 28th to load lumber for the West Coast.

The German steamer "Ella," of the Jobson & Ostrander service, is on her way to Mexico with 250,000 feet of lumber loaded at Vancouver.

On July 2nd the British barque "Cissie" was towed into the stream, having taken on a cargo of 1,405,000 feet of lumber at Hastings Mill, consigned to the United Kingdom.

It is considered probable that the steamers of the Lloyd General Italiano Company will in the near future make Vancouver a port of call. The Italian company is arranging a round-the-world service.

The Canadian-Mexican liner "Georgia," on her last trip took away 50,000 feet of lumber from the Brunette Mills at New Westminster for Mexico.

The steamer "Katanga," just in from Guaymas, Mexico, where she delivered a cargo of coal from Comox, B.C., has been chartered by Henry Lund & Company to carry lumber from Gray's Harbor, Washington.

The steamship "Antiochus," of the Blue Funnel line, took on 100,000 feet of lumber at Victoria on July 1st, consigned to the United Kingdom.

The barque "Puritan," which recently ran aground in the Fraser river, after taking on a cargo of lumber at the Fraser River Mills, Limited, left for Esquimalt on Friday to be resurveyed. The jettisoning of the deckload of lumber will have to be borne by the underwriters.

The charter of the British ship "Hesland," which was to load at Hastings Mill, has been cancelled, and the "Springbank" has taken her place. The Chilean barques "Curzon" and "Royal Sovereign" are also en route here to load lumber for Iquique, while the schooner "J. H. Lunsman" is en route from San Francisco to load for Japan.

Two Chilean sailing vessels, the "County of Linlithgow" and the "Curzon," and the British ship "Rosalia," are loading lumber at Vancouver, the first two for Chili and the last named for Australia. The British steamer "Tymeric," of the Australian mail line, is loading lumber at the Fraser river for Australia.

The British barque "Puritan," which grounded in the Fraser river while being towed to sea by the tug "Pioneer," had a cargo of 1,950,000 of lumber on board for Melbourne. A good portion of the deckload was removed before the ship could be floated. The "Puritan" was swerved shoreward by the swift current and swung broadside to the land. The Pilot Board called a session to fix the blame for the accident, but no decision was arrived at.

Capt. Ballantyne, of the barque "Hawthornbank," now loading at Hastings Mill, is paying his first visit to Vancouver in 22 years. When he was an apprentice on the ship "Cape Verde" the vessel called at this port for lumber, but since then until the present visit a charter has never called him to this port. It is interesting to note that on the occasion of the captain's visit 22 years ago the Hastings Mill—then a very small concern—furnished the cargo for the "Cape Verde."

Increasing their Western Stock.

The millmen of British Columbia and the prairie provinces will, no doubt, fully appreciate the latest display of enterprise for their benefit made by the famous Simonds Canada Saw Company, at their Vancouver branch, 98 Powell street. It consists in the establishment there of a fully equipped saw repair works, modelled on the lines of the plant at Montreal for the benefit of eastern customers.

Mr. Geo. E. Hunter, an expert from the eastern factory, has been in Vancouver for some weeks looking after the equipping of the various departments and the setting up and adjusting of the machinery required for the operations of re-grinding, hammering, re-toothing, brazing, and other kinds of saw doctoring. Any size or make of saw can be handled and the necessary repairs made quickly and with the utmost precision. This department has been a long-felt want, and sawmill operators will feel grateful to the Simonds firm for supplying it. They will save money as a result, and in addition will be enabled to keep their equipment of saws in better shape than heretofore.

Mr. C. A. Nelson, office manager of the Simonds Canada Saw Works, reports a brisk demand for the firm's goods from all parts of British Columbia and the prairie provinces. He is planning to double the quantity of stock carried for the western branch. In addition to all makes of the Simonds saws, the firm handle Hanchett filing room machinery, Morton emery wheels and American steel split pulleys.

Mountain Lumber Trade Improving.

W. A. Anstie, secretary of the Mountain Lumber Manufacturers' Association, Nelson, B.C., in a recent report to the "Canada Lumberman" says: "Conditions in the mountain district of British Columbia with reference to the lumber business are much improved and the outlook at the present time is better than we have enjoyed during the past two years. Our mills are all in operation and report a fair amount of business on hand, and stocks have been reduced by about 33 per cent. since the first of the year."

"From one end of the prairie to the other we receive the most encouraging crop reports and there is no question but that a very considerable influx of desirable settlers has occurred already this year. Altogether, prospects warrant an optimistic feeling, and although as yet prices are still far too low to be satisfactory, there is a reasonable expectation that they will be restored to a profitable basis within the next few months."

Miscellaneous Items of News.

Fully 90 per cent. of the sawmills in the interior of British Columbia are now in operation in consequence of the heavy demand for lumber in the prairie provinces.

The Duncans Lumber Company, whose mill and limits are located at Duncans, on Vancouver Island, has made an assignment for the benefit of creditors.

A number of the sawmills in the Kootenay district are running twelve hours per day in order to make up for time lost during the prevalence of high water a month or so ago.

A deal involving the transfer of sixteen sections of very fine timber south of Prince Rupert has just been closed at Victoria by Mr. A. T. Frampton, the purchasers being Messrs. Hanbury and Evans, of Vancouver.

Surveying parties are going over the proposed route of the Victoria and Barclay Sound Railway, which will tap the west coast of Vancouver island with deep water terminal at Esquimalt harbor. The line will open up a new timber country.

The Okanagan Lumber Company suffered a severe loss on June 28, when their lumber yard at Deep Creek, near Armstrong, B.C., was swept by fire. How it originated is a mystery, as the yard is located a considerable distance from the mill, and beyond reach of a flying spark. The loss will be heavy.

The Vancouver Board of Trade has passed a resolution asking the boards of trade of the Northwest to use their influence to have the Dominion Government establish a duty of \$2 on rough lumber and 30 cents on shingles imported into Canada. This resolution is due to the fact that last year's importations of lumber from Washington State amounted to over four million dollars.

The mill owners of Aberdeen, Wash., at a meeting decided to start up all their mills on July 6th. This action was not brought about by any improvement in market conditions, but is to be ascribed to the fact that the mill employees are feeling the pinch of hard times owing to enforced idleness caused by the closing down of the mills some weeks ago. The owners have agreed to operate their plants as long as they suffer no loss by so doing.

More Doukhobors have arrived in the Kootenays. About 80 men have located at Trail. The community are operating a portable sawmill which cuts 5,000 feet a day; another larger mill has been purchased, and is at present at Castlegar. This will cut 40,000 feet a day. The output will be used to build houses for the colony. At Pass Creek the community has purchased 2,000 acres of land; at Grand Forks the community owns 1,000 acres of land. The colony now numbers about 1,500 men and 500 women.

According to the reports of sawmill men in the Kootenays the demand for lumber in the prairie provinces is stronger than at any time during the past two years. Nearly every mill is in operation, and despite the large output, stocks, which last January amounted to about two hundred million feet, have decreased to about one hundred million feet. With a good crop an improvement in the lumber conditions next fall will be a certainty. Prices at present, however, are showing no tendency to increase.

Washington mills are receiving heavy orders for lumber. The Chicago, Burlington & Quincy Railroad has closed a contract with one mill for 1,500,000 feet of lumber, and the Puget Sound navy yard is in the market for 545,000 feet. The railroad company's order is to be delivered at half a dozen points where there are shops. The contract calls for lumber for box-car building and material consisting of siding, flooring and car joists. The order for the navy yard is marked "urgent," and is one of the largest bills ever called for from that yard. It consists largely of planks and timbers, and will be an easy order to handle.

Mr. C. W. Gladwin, Provincial Fire Warden, states that the Provincial Government is determined to leave nothing undone to protect the forests from fire. This year, in addition to ten regular fire wardens and three assistants, all the Government road superintendents have been

sworn in for fire patrol duty, so that there are forty men patrolling the districts along the Pacific coast. Three men will guard against forest fires in the north Vancouver district opposite Vancouver. The worst fire, thus far, was one that started at the foot of Grouse Mountain and burned over ten acres of timber. It was evidently started by careless campers, who left fires burning behind them.

B. C. Timber Commission Appointed.

It is reported that a commission has been appointed by the British Columbia Government to take evidence in the timber question, consisting of Hon. F. J. Fulton, Commissioner of Lands; Mr. A. S. Goodeve, M.P., and Mr. A. C. Flumerfeldt, of Victoria.

The principal question which will come before the Commission will be the perpetuity of titles. Those holding timber pay to the Government annually \$140 a square mile on the coast and \$115 in the mountains. They wish a guarantee that they may hold this land until the timber is cleared off, or may transfer it with that assurance to another. On the other hand, the Government is anxious to prevent the licenses being trafficked in by speculators. Another feature of the case is that sawmill operators do not want to purchase licenses and erect mills without some assurance of continuity of license beyond the present limit of twenty-one years, because the initial expenditure for a sawmill plant is enormous. It is claimed that perpetual licenses would prevent indiscriminate slaughter of timber in order that the trees might be cleared off before the license expires.

It is the intention of the Commission to tour the province, examine witnesses and also study every phase of the lumber industry. One of the points to be considered is the question of adopting better regulations against fire. Of no less vital importance is the future policy of the Government. In order to be in a position to make recommendations the Commission will hear the views of mill owners, loggers and holders of timber leases and licenses.

Trade Conditions in Barbados.

S. P. Musson, Son & Company, Barbados, report under date of June 19th as follows: Lumberstuffs—W. Pine—Arrivals during the fortnight consist of the tramp schooner "Lord of Avon" from St. John, N.B., with 300M feet, and the tramp schooner "Reliance" from Shelburne, latter to selves, with 223M. feet, both of which cargoes were sold to arrive at \$29 for merchantable, and \$21 for second quality. These cargoes have supplied present requirements, but there will be an opening for another small cargo a little later on. Spruce—The only arrival to report is a small lot of 54M. feet ex "Reliance" which we sold at \$21 for merchantable. The crop being now virtually over, there is very little demand for this class of lumber. Pitch pine—No arrivals, and stocks in dealers yards are being gradually reduced. Shingles—Receipts consist of 662M. cedar laying ex "Lord of Avon," which were sold at \$1.90, and the schooner "Minnie T." with 1,200M., which were sold to arrive some time ago at same price. No receipts of Long Gaspe, which are in fairly good demand. Shooks—No arrivals, but stocks are ample. Wood Hoops—Receipts consist of 400 bundles, imported by a dealer—market is fully supplied.

U. S. Tariff Reaches Its Third Stage.

The United States tariff question, along with the rest of the tariff, has reached its third stage. The House of Representatives and the Senate have each dealt with it, and now it is the subject of the conference between the two bodies. The present tariff on lumber and the tariffs proposed by the House and by the Senate are shown in the following table:—

	House.	Senate	Present Law.
Rough	\$1.00	\$1.50	\$2.00
Finished one side	1.50	2.00	2.50
Finished two sides	2.00	2.25	3.00
Finished three sides	2.50	2.62½	3.50
Finished four sides	3.00	3.00	4.00
Shingles30	.50	.30
Lath20	.25	.20

It is believed that an agreement will be reported within ten days.

It is reported that a German has invented a process for extracting alcohol from sawdust. This is a death-blow to the temperance cause. Of what use is prohibition when a man can take a buck-saw, go out into the woodshed, and get drunk on a stick of stove wood?

However, we are not advised that the Gordon Hollow Blast Grate Company, of Greenville, Michigan, have as yet discontinued the manufacture of their celebrated grate for burning wet, green or frozen sawdust, so it is possible that it is still too early to feel greatly alarmed.

The Board of Railway Commissioners has held its final hearing in regard to express rates, classification and conditions of carriage. It is expected the matter will be dealt with without much further delay.

THE WOODWORKER

A Solution of the "Stickerman's Problem."

The "Problem for the Stickerman," which appeared in the "Canada Lumberman and Woodworker" of June 15th, appeared simple enough on a casual consideration, but contained elements which required more than a passing thought. A concise and well worked out treatment of the matter is submitted by Nap. J. Millette, St. Johns, Que. Mr. Millette is to be commended for so interesting a treatment of the subject, and his ideas will be read with interest by stickermen. The "Canada Lumberman and Woodworker" would like to have the opinions of other readers on the same subject, or on other subjects of interest. Mr. Millette's communication is as follows:

Editor "Canada Lumberman":—You are investigating a very important point of interest for millmen, with your article, entitled: "A Problem for the Stickerman," published in the "Canada Lumberman" of June 15th, 1909.

If I had to answer your question briefly, I would say "No." The

right angle with same, and to cutter line, on true circle from centre of head. Then at any desired point, at a right angle with cutter line, the ends of these two lines are squared out, forming part of fig. 3. All intermediate lines are extended out, following the same process. To complete fig. 3, space the size of fillet at all points from 11 to 19 as designated at fig. 2, and mark out same at corresponding points on fig. 3. By tracing a line touching these points we have the true cutting edge of cutter to perform fillet as at fig. 2.

Fig. 4 can be made any desired shape to suit the operation, following the cutting edge.

In taking close notice of cutter line between figs. 3 and 4, we find that this line is slightly curved. The cause of this is the fact that the closer we work to the head, the more the cutter is slanting, changing the working angle at every degree of revolution. Therefore, if we require a curved edge cutter to perform straight work, we can plainly see that we cannot fit two cutters made to produce reverse shaped moulding.

reason of this is quite difficult to explain, however, I will try to do so as clearly as possible.

If the face of the cutter was straight and at right angles with the tangent of a circle described by the head when running, the cutter would be exactly the reverse shape of the moulding, and therefore could fit a cutter made to produce a moulding of reverse shape. But, as sticker heads are all made to have cutters work on angles of various pitches (according to design), requiring a longer cutter to operate, than the thickness of the stock to be operated, the surplus length of the cutter is unevenly crowded in its whole length, according to the angle at which it is held in revolving on its centre, when passing the thickness of the stock.

To illustrate the "unevenness" of the crowding, I submit a sketch of plain straight work.

Sketch No. 1—Fig. 1 represents a cross-section of an ordinary four-sided sticker head. Fig. 2 represents a fillet, having three sides straight. Fig. 3 represents a lay-out of fig. 2, made the whole length of the cutter, having same width at intermediate points. Fig. 4 represents a portion of what should be the cutter, made to perform fillet as shown at fig. 2, dotted line at edge next to fig. 3 shows curved working side.

Referring to fig. 2, sketch No. 1, let lines 1 and 9 represent the full height of the fillet, divided by intermediate lines 2, 3, 4, 5, 6, 7, 8, which are used to determine the different points referred to, at which the cutter reaches the stock when operating.

Extend extreme lines 1 and 9 on fillet, fig. 2, to working line at a

Sketch No. 2 shows a mode of laying out moulding cutters which I have found to be satisfactory. It is very simple in itself and I believe that every stickerman could master this problem at once.

If any points of this correspondence would need further explanation I would be only too pleased to give further information.

Necessity for Guards on Dangerous Machines.

Factory Inspector Fred Kellond in his annual report to the Ontario Government says:

"Modern industry is becoming increasingly more dangerous, and in the many varied processes involved many cases of accident, resulting in the injury, sometimes in the death of the employee, inevitably occur. The utmost precautions on the part of both employer and employee might reduce the number of accidents, though one can never hope to entirely stop them; but every effort should be made to decrease the number and to reduce the possibility of injury.

"The guarding of machinery and dangerous places forms a very important part of an inspector's duties. I have been able during the past year to have a large number of guards put on different machines as well as have dangerous places, such as holes in floors, drive belts, etc., guarded. I have experienced very little difficulty in having my wishes carried out, especially after the second visit. I say second visit, for perhaps in this connection, if in no other, frequent inspection is fruitful of good results. In previous years the small number of inspectors in the province

rendered it impossible for inspectors to see that their recommendations of improvements in factories were followed up; but with the increase in the staff more frequent inspection is possible, and the procrastinating manufacturer gets a reminder in the person of the inspector, who drops in to see "how that guard works." Another difficulty, I regret to say, that I have met with is the statement that "My men will not use guards." This is most frequent in woodworking machinery. Jointers, saws, and shapers are the machines in connection with which this statement is made. While I believe this statement to be true in a number of cases, my opinion is that if an employer can make certain rules which he expects his men to observe, i.e., "no smoking," "start at 7 a.m., work till 6 p.m.," and the employees breaking these rules are promptly discharged, why can he not make a rule that guards must be used, and further see that they are used?"

A Canadian's Useful Invention

An interesting invention in the direction of improving the feed gearing of planing and moulding machines for woodwork has been patented by Mr. James Baird, of Galt, Ont. The invention applies to machines in which the work to be planed or moulded is carried through the machines by means of rolls or revolving slats.

The object of the improvement is to provide a suitable mechanism between the driving gears and the rolls or slats to compensate for any variation of speed that may occur between the different rolls, as the rolls rise and lower over the varying thickness of boards or planks that are being planed to a uniform thickness, and to prevent the locking and binding between the rolls and gears that takes place when thick or thin boards follow each other through a planer and moulder.

These objects are attained by the mechanism illustrated in the accompanying drawing, in which fig. 1 is the top view of the rolls and gears removed from the machine. Fig. 2 is an elevation of rolls and gears of planer or moulder, showing a section of table with lower rolls in position. The gearing to drive the lower rolls is similar to the gearing that drives upper rolls and is not shown. Similar letters refer to similar parts in both views.

Diagrams of Compensating Gear Machinery.

comparing drawing, in which fig. 1 is the top view of the rolls and gears removed from the machine. Fig. 2 is an elevation of rolls and gears of planer or moulder, showing a section of table with lower rolls in position. The gearing to drive the lower rolls is similar to the gearing that drives upper rolls and is not shown. Similar letters refer to similar parts in both views.

Rolls A and B run in bearings which are mounted on suitable slides or are hinged to the central shaft C, so as to allow the rolls to rise and fall with the varying thicknesses of lumber passing through the machine. These rolls are held down by springs or weights, not shown, to secure

a positive feed. At the outer end of roll shaft D are keyed driving sleeves E and F, with projecting lugs G and H. On sleeves E and F are mounted loosely (without key) gears I and J, with protecting lugs K and L.

The mode of operation is as follows: The driving gear M, revolving in fixed bearings, drives gear J in the direction of the arrow, bringing the projecting lug L in contact with the lug G on the sleeve F, thus driving the roll B. As lumber is fed to the machine, roll B rises to accommodate the surplus thickness, and the projecting teeth sinking or being pressed

Compensating Gear for Planing and Moulding Machines.

into the lumber drive it forward to roll A. The teeth on roll A then seize the lumber and the roll A starts to rise, but the moment roll A starts to rise the action of the teeth on gear I, rolling on the teeth of gear M, whose centre is fixed, causes roll A to revolve faster than roll B. The teeth of both rolls being embedded in the lumber, roll A draws the lumber ahead faster than roll B is being driven, consequently roll B and the projecting lug G on sleeve F draw away from the driving lugs on gear J. Gear J, being loosely mounted on sleeve F, allows the sleeve to accelerate its speed for the instant and relieves the tremendous strain that takes place between the gears and rolls. This strain otherwise often results in locking the gears and stopping the feed, sometimes breaking the parts and causing a great deal of extra wear.

The invention is based on the principle that any feed roll of a planer or moulder will increase or decrease its speed as it rises and lowers to suit the varying thickness of lumber.

Mr. Baird has sold the Canadian rights in the invention to Messrs. Cowan & Company, of Galt, who are now applying it to their line of moulders, and in every case it is reported to have given entire satisfaction, being a great saving on the gears of the machine as well as making them easier to run and causing less trouble all round than the common rigidly keyed gears.

The compensating gear is illustrated also in the accompanying half-tone engraving, which gives a clear idea of the principle involved.

Patents of Interest to Lumbermen.

Below will be found a list of patents issued by the Canadian Patent Office on June 22nd, 1909, relating to inventions of interest to lumbermen, and furnished by Fetherstonhaugh & Company, Ottawa, Russel S. Smart, resident:

118,985—J. C. W. Stanley, Vancouver, B.C.; process of preparation of wood pulp.

118,995—G. Binder, Louisville, Ky.; sawing machines; assigned to Kentucky Gear Machine Company.

118,996—G. Binder, carriage feeds for sawing machines; assigned to Kentucky Gear Machine Company.

118,998—F. L. Smith, Chicago, Ill., and T. B. Williams, Orange, Mass.; rotary cutting mechanism.

119,000—R. S. Orr, Pittsburg, Pa.; poles; assigned to Pittsburg Reinforcing Pole Company.

119,015—B. Miller and J. Dore, Wetaskiwin, Alta.; machines for underbrushing.

The employees of R. Laidlaw & Company, Toronto, to the number of between three and four hundred, held their annual picnic to Beaverton on Saturday, July 10th. Practically all the employees and their families from the two yards, two factories, two planing mills, and head office attended the picnic. Games of all kinds were indulged in and a fine time was enjoyed by all. The east and west yards held their annual baseball match and some startling plays were brought off. The result was a victory for the east after a close struggle, the score being 6 to 5.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

A Distinctive Single or Double Surfacers.

The most recent product of the S. A. Woods Machine Company, Boston, is the No. 59 single or double surfer, which embodies distinctive features making it easily possible to turn out the highest grade of work at a feed of 100 to 150 feet per minute. The machine has a wide range, and is adapted for use in any factory where large output and high grade of surfacing are required. The company claim that its unusual capacity and its ability to turn out, at a high rate of feed, the same results as have heretofore been considered possible only at a low rate, qualify the machine for any class of work, from furniture and cabinet dressing to box boards and the so-called rougher classes of surfacing. It is especially successful in the marking of cotton wood and gum.

Fast feed and large capacity are attained through the latest and most original features of the Woods machines. Prominent among these is the patent, solid back, round cutter-head. This is possessed of exceptional stiffness and strength, the strain of the cutters being taken entirely on the solid metal of the head. The bolts are not depended on to hold the knife in resistance to the strain of the cut as in the ordinary cutter-head. The round head lends itself to perfect balancing and is especially designed for use with high speed steel knives, which render simple the maintenance of perfect balance.

Of still greater importance is the patent truing device, by means of which the knives can be trued and sharpened while running. This, the

to end. If accidentally sprung the round head may be readily reground or turned to a perfect cylinder. Each knife is set at exactly the same angle as in the case of the square head. Distortion is avoided by the method of holding the knives in place by means of a series of independent blocks in which are pocketed the points of square-headed set screws.

The construction provides a solid back for the knife and block so that the strain is brought upon the metal of the head itself, and not upon a series of bolts. The round head gives the maximum amount of metal for a given diameter of cutting circle; over 40 per cent. in excess of that in a square head.

The tendency of shavings to pack under the lip is avoided and the danger of breakage is reduced. All cutter heads are given a thorough running balance before being placed in the machine; the heads, knives, bolts and blocks being first independently balanced and then all tried collectively while the cutter-head is run at full speed.

The radial gauge, which is provided for setting the knives correctly, is designed on the theory of a pair of calipers. It consists essentially of two curved arms connected by a shaft. These arms hook over the journals at each end of the head, the gauge being easily locked in position by means of springs. Two setting rolls, having a close sliding fit on the shaft, serve, by means of delicate touch, to set the knives with exactness.

Truing devices designed for truing the knife edges while in motion are provided for both top and bottom heads. Both devices are per-

Woods No. 59 Surfer.

company say, is undoubtedly the most radical feature and the greatest improvement added to planing machines in recent years, as it makes possible the attainment of results which are otherwise absolutely impossible.

The combination of these two distinctive features insures a knife mark for every knife upon the cutter-head. The result is finer finish and faster feed. For example, with four knives upon the cutter-head running at 3,800 revolutions per minute, there would be produced about 13 knife marks to each inch with a feed of 105 lineal feet per minute. This result is obtained in daily practice and is worthy of comparison with the results ordinarily secured under the old method.

In former practice, wide machines have been used, so that the desired output could be obtained by running two or more boards at a time. With the improved construction and the high rate of feed which is possible, it is in many cases advisable to use narrow machines speeded to a higher rate of feed. The same output is obtained as with the former method, but with a machine of lower first cost, that occupies less floor space, is more easily maintained, and less expensive in the matter of upkeep.

As a general proposition it is wiser to install a machine of a size no more than sufficient to take the maximum width of boards run than to put the feed of a single line of boards to the limit of the operator to keep the machine full. When desired the machine can be adapted to feeding short stock, and will handle it as short as seven inches.

The cutter head is the vital feature of the machine. Upon its accuracy depends the character of the work. An entirely new type of solid back, round cutter-head has been designed. This is stronger, stiffer and safer than a square head with the same diameter of cutting circle. Made in a single piece, of the same grade of fine crucible steel as the standard square head, it is turned to cylindrical form and parallel slotted from end

manently attached to the machine. In each case the device consists of a perfectly straight slide bar and a slide accurately fitted thereto which carries an emery stock. The slide bar, which is permanently attached to the machine, is set absolutely parallel to the cutting cylinder. During the process of sharpening the slide is slowly moved from end to end while the cutter-head is revolving at full speed. The truing process can be completed without stopping the machine or raising the top cutter-head.

The frame and bed of the machine are given unusual stability; the patent adjustable wedge platen makes it possible to change the cut quickly, or to convert the machine into a single surfer. Divided rolls permit of running different thicknesses of stock at the same time; patent narrow rolls may be furnished, each of which has an independent yield to accommodate varying thicknesses individually. The feeding-in and feeding-out rolls are tensioned separately through the medium of springs and weights.

The top head is adjustable by hand, and the bottom head has a sliding fit in the frame and may be adjusted vertically in a parallel plane. Both the head and the yoke may be drawn out from the machine on the working side.

The cutter-head boxes are of the swing clamp type, which provides for fine adjustment. The design is such that the cap is not forced down upon the journal, but settles into place by its own weight and is there clamped. A large oil reservoir provides for continuous lubrication.

By means of the belt-releasing device the belts may be quickly and easily slackened or tightened by the motion of a lever. The cutter-head pulleys are provided with serpentine grooves which prevent air cushioning. Chip breakers and pressure bars are provided, the former being made in sections and fitted with removable tempered steel spring shoes. The machine is adapted for driving by tight and loose pulley, by single pulley with belt binder, or by flexible coupling for direct motor connection.

POSITION BY AN EXPERIENCED LUM- ber Buyer and Inspector. Box 764, CANADA LUMBERMAN, Toronto. 14

WANTED—EMPLOYEES

WANTED IMMEDIATELY LUMBER IN- spector Shipper, must understand car and boat shipping and able to look after from 25 to 30 million feet of Pine and Hemlock with small quantity of Hardwood. Apply stating salary expected, giving references and experience to Box 795, CANADA LUMBERMAN, Toronto. 14

BOOK-KEEPER AND STENOGRAPHER wanted; must be quick, accurate and good penman, and must have practical experience in retail lumber office where everything in building material is handled. Must be capable of taking full charge of books and willing to act as office salesman and work long hours.
Apply at McKINNON'S LUMBER, Office or write M. McKINNON, Box 337, Cobalt Ont. 11

BUSINESS OPPORTUNITIES

For Sale

Good Business Chance

PORTABLE SAWMILL IN GOOD SHAPE, latest improved, with 25 h.p. Engine, cable feed friction set works, inserted tooth saw, double edger slab saw, trucks, wagon, sleighs, also quantity of timber in the yard, also 50 acres of good clay loam, good building. Bargain. Will sell together or separate.
For particulars apply to Box 563 Newmarket, Ont. 11

MISCELLANEOUS

For Sale by Tender

Planing Mill and Lumber in Toronto

TENDERS FOR LOTS 249, 250, 251 AND 252, Plan M 2, Spadina Road, Toronto, together with building, machinery, and about \$10,000 worth of lumber, the property of the late Jesse Cook, will be received by the undersigned up to the 24TH OF JULY. As a going concern, real estate subject to mortgage of \$4,500. Terms 25% cash, balance 30, 60 and 90 days secured. For further particulars apply to MARTHA E. COOK, Executrix, Zephyr, Ontario. 14

SALE OF McCormick & Moore Timber Limits

The undersigned are instructed to sell by Public Auction, as one Parcel or separately to suit purchasers, at the Russell House, Ottawa, on

September 30th, 1909,
at 2.30 p. m.

the following Timber Limits situate in Block A, Upper Ottawa, Province of Quebec, viz:

Parcel 1. N. 1/2 Lot No. 8, Range 4, Block A, Upper Ottawa, Que., 25 square miles.

Parcel 2. S. 1/2 Lot No. 8, Range 4, Block A, Upper Ottawa, Que., 25 square miles.

These limits are surveyed and are easy of access—the Ottawa River and Branches traversing both limits.

Terms 10% of the purchase money to be paid down at the time of sale, and the balance in equal instalments at One (1), Three (3), and Six (6) months thereafter with interest at the rate of five per cent. per annum.

For further particulars and conditions of sale apply to The Royal Trust Company (Ottawa Branch) and to Code & Burritt, Solicitors, Carleton Chambers, Ottawa.

Dated this 7th day of July, A.D. 1909.

THE ROYAL TRUST COMPANY,
Trustees for Sale. 18

Sale of Valuable Timber Limits

Andrew MacCormack Estate and Other Interests

THE UNDERSIGNED ARE INSTRUCTED to sell by Public Auction en bloc, at the Russell House, Ottawa, on September 30, 1909, at 2.30 p.m., the following Timber Limits situate in Block A, Upper Ottawa, Province of Quebec, viz:

Berth 676 Licence No. 580 of 1908-09, south half, Lot 16, Range 4, Block A, 25 square miles; Berth 677, Licence No. 581 of 1908-09, south half Lot 14, Range 3, Block A, 21 1/2 square miles; Berth 611, Licence No. 582 of 1908-09, Grand Lac Victoria, River Ottawa, 19 square miles; Berth 678, Licence No. 583 of 1908-09, south half of north half Lot 16, Range 4, Block A, 9 1/2 square miles; Berth 679, Licence No. 584 of 1908-09, north half Lot 16, Range 3, Block A, 15 1/2 square miles; Berth 680, Licence No. 585 of 1908-09, north half Lot 15, Range 3, Block A, 18 square miles; Berth 681, Licence No. 586 of 1908-09, south half Lot 17, Range 5, Block A, 25 square miles; Berth 682 Licence No. 587 of 1908-09, north half Lot 16, Range 5, Block A, 25 square miles; Berth 696, Licence No. 588 of 1908-09, north half lot 17, Range 4, Block A, 25 square miles.
Total 183 3/4 square miles.

These limits are all surveyed and are easy of access by a good roadway from Ville Marie to their location. They comprise some of the best pine and pulp wood areas in the Province.

The Trustee reserves the right if the Reserve Bid is not reached, to offer the berths separately.

Terms—10 per cent. of the purchase money to be paid down at the time of sale, and the balance in equal instalments at one (1), three (3) and six (6) months thereafter with interest at the rate of 5 per cent. per annum.

For further particulars and conditions of sale apply to The Royal Trust Company (Ottawa Branch), and to Code & Burritt, Solicitors, Carleton Chambers, Ottawa.

Dated this 31st day of March, 1909.

THE ROYAL TRUST CO., Ottawa,
Trustees of Sale. 18

Limits for Sale

Timber Limits For Sale

IN THE PROVINCE OF MANITOBA, 84 square miles of standing timber, adjoining Lake Winnipeg. These limits are comprised principally of Spruce and Tamarac suitable for marketable lumber, railway ties and poles. In connection with these will be sold a well equipped mill, steamer and two barges. For terms apply to H. P. MACMAHON, Traders Bank Chambers, Winnipeg, Man.

Log Boiling for Veneers.

As the result of a number of interviews with vat and box men, the conclusion is reached, by "Packages," that it is not possible to formulate any fixed rule for boiling or steaming logs for veneer work or bolts for staves. It seems to be entirely a matter of practice and observation. Two logs of about the same size and sometimes from the same tree will each require a different length of time to get them in a proper condition for the veneer lathe. A butt cut will take longer to boil than a cut from the upper part of the tree. The want of any means of testing the condition of the log other than that afforded by putting it in the machine is one of the reasons for the absence of any certain or reliable rule for guidance in this sort of work. The changing from live to exhaust steam will often upset the calculation of even old and experienced men. It is also noticed that a log that is "off" in the boiling will increase the defects in the timber when under the knife by reason of its not cutting clean and materially increases the difficulty of working. If there were some means of trying a log, like sticking a fork in a potato, it would help the matter considerably, and in that case some cheap boy would take the place of an experienced man.

Preservation of Timber.

In recent years the importance of preserving timber from decay by the use of various antiseptics has been generally recognized. The value of properly seasoning timber before such treatment is not so generally known, though it is one of the most important features of the treatment.

There are three main advantages to be derived from the proper seasoning of timber, namely: The increase in strength of the timber, the greater ease of injection of antiseptics for preserving timber, and saving in freight charges due to the decreased weight.

From thorough tests made by the Forest Service on various pieces of timber, it appears that thoroughly air-dry or seasoned timber has about double the strength of the green material. It is well known

to all operators of wood-preserving plants that antiseptics are not only difficult to inject into green wood, but that it is practically impossible to obtain a uniformly satisfactory treatment of such material at an economic cost, for the purpose of insuring a prolonged life.

The last item would at first seem too trifling to be worthy of discussion, but from data obtained only recently it appears that western yellow pine lost 50 per cent of its green weight after three to five months seasoning. This means a saving of 50 per cent. of the freight charges and a corresponding saving in the handling of the timber, and is, therefore, a far too important point to overlook.

Considering these three points, it will be seen that there is not only a material saving in the seasoning of timber, but also a proportionate increase in the value of timber as a structural material. The seasoning of timber is never an expensive operation, even when done artificially. In the southern part of the United States, a satisfactory degree of seasoning could be obtained by exposure of the timber to the air for a period of three to six months. In some of the northern States, however, a somewhat longer period is necessary to secure satisfactory results.

An Oak Flooring Campaign.

Of the immense quantities of flooring used in the United States, it is estimated by leading oak flooring institutions that only about three and a half per cent. is oak. Maple flooring, owing to diligence and advertising acumen, has secured a much larger percentage of the trade. At the present time the oak flooring manufacturers of the country are planning an elaborate campaign of education among flooring users in an attempt to at least double the present output of this highly valuable flooring material. Beyond question, for high class flooring purposes oak has no equal for beauty and lasting and hygienic qualities. An office building, a parlor, a library, hall or dining room is half furnished when it is laid with a handsome oak or parquet flooring, in which oak plays an important part.

The move on the part of oak flooring producers to present the merits of their product to users is to be highly commended, and there is no question of failure in wonder-

Review of Current Trade Conditions

Ontario

Dulness is the principal feature of the Ontario lumber trade according to reports from most localities. High grade white pine goods continue steady, but the lower grades are quiet and the demand is small. Collections are reported to be unusually good. Out of 150 accounts reported by one firm only two had to be renewed. Hemlock seems to be the bane of the market at present. Offerings are much too plentiful and prices are sagging. This is having an adverse effect on other lines, as consumers, noticing the low prices for hemlock, think pine prices should also decline. Reports from travellers in western Ontario indicate that price cutting is going on quite extensively and making good business hard to get. In spite of these drawbacks, however, a fair amount of trade is in progress and when one compares prices with those of a year ago the improvement is very noticeable. In the Ottawa valley, lower prices are reported, particularly for lath and shingles, though white pine and spruce are not changed materially. Large producers, however, are not allowing the dull market to affect their quotations. The decline in lath amounts to from 25 cents to 75 cents per thousand. The 32-inch lath are far too numerous and are selling at 90 cents. Prices of shingles are also weak for upper grades and steady for lower ones. Spruce and hemlock are firm for regular sizes. Mill run spruce is steady at \$17.50 to \$18. There is an excellent demand for selected lots. Hemlock is firm at \$13 to \$15, and is cutting into mill cull and shipping cull pine. Railway ties are dull and telegraph poles are in good demand. Long length telegraph poles are scarce.

Eastern Canada.

Recent important developments in the New Brunswick lumber trade include a stiffening of prices in spruce deals for export to the English markets. Cedar shingles, on the other hand, have weakened a trifle, although St. John dealers are not inclined to look upon this as serious. Spruce clapboards are unusually scarce. This line has been continually growing scarcer for some years past, and manufacturers are able to obtain good prices for their product. The prevailing quotations are: "Extras," \$42; "clears," \$39, and "2nd clears," \$37, f.o.b. St. John. Encouraging reports are coming to hand regarding the English spruce deal markets. It is believed that a general upward movement in prices of this line has commenced. Prices became stronger about a fortnight ago, and buyers are making many more enquiries than formerly. It is not thought, however, that the improvement will tempt any manufacturers to increase their season's output, or even to enlarge their winter's logging operations. The tendency is, in fact, towards continued conservative methods of operation. There are about six and one-half or seven million feet of English spruce deals in St. John stocks, and prices are from \$14.50 to \$14.75 for specifications containing 50 per cent. sevens and eights, 40 per cent. nines and 10 per cent. elevens and wides, f.o.b. steamer St. John. The hot season is expected, as usual, to result in dull trade for cedar shingles in the New England States, but improvement is confidently looked for as soon as cooler weather sets in. Prices are \$2.75 to \$2.85 on dutiable "extras" and \$2.25 and \$2.35 on dutiable "clears," f.o.b. schooner St. John. Boston has shown a dull demand for eastern spruce during the last fortnight. Buyers believe there is still some decline due, before the bottom is reached. Some manufacturers are shutting down for a few days at a time so as not to get ahead of their orders. This will perhaps help the market to remain steady. Frames, 9-inch and under, are selling at \$23. Random is easier and the demand is quiet. Small sizes have been offered by several mills at as low as \$20.50. Large random is in poor demand at \$23, and some buyers expect lower prices.

Boards are in moderate demand only and prices are easier. Red cedar shingles at Boston are easier on account of more plentiful offerings. Good cedar extras have sold as low as \$3.75, and it is doubtful if many would pay this price to-day. There is very little activity to the demand. Lath are not in active call and prices lack strength. Sales of 1½-inch are reported at \$3.35, although \$3.40 is the general asking price. Demand for 1⅝-inch is quiet. Prices range from \$3.75 to \$3.90.

Great Britain.

A comparative statement and review of imports, consumption and stock for the first half of the year 1909, issued by Edmiston & Mitchell, Glasgow, states that conditions have been unsatisfactory during that period. No briskness has been experienced and, although a slight improvement has occurred latterly, it is of such an unappreciable nature as to be scarcely worthy of mention. The market remains in a more or less apathetic condition, with little prospect of any material betterment during the latter half of the year. In white or yellow pine logs the stock on hand is 933 loads, mostly small and second-class wood. Deckwood holdings are practically nil. There is some demand for the latter. Square pine stocks are ample. Quebec birch logs are low in stocks and the demand is slight. Birch planks are easier. Elm log values are well maintained. Oak logs are in poor demand and stocks are heavy. The fact that consignments of Quebec goods at this early date of the season are meeting with little favor speaks volumes as to the state of the market. Great difficulty is being experienced in selling any of the regular grades and sizes, and a decline in values has been recorded in most instances. Low port deals are moving very slowly, and values show no appreciation. Current values are given as follows: First pine deals—Broad, £34 to £35; 11-inch, £32 to £33; ends and non-dimensions, £22 10s. to £23 10s. Second pine deals—11-inch and up, £23 10s. to £25 10s; ends and non-dimensions, £16 to £18. Third pine deals—11-inch and up, £15 10s. to £17 10s.; ends and non-dimensions, £13 10s. to £14 10s. Red pine deals—9 and 11-inch, £10 to £11; narrows, £8 to £9. First pine sidings and strips,—9 to 10-inch, £23 to £24; 11 to 12-inch, £24 to £25; 13 to 14-inch, £27 to £28. Spruce deals—9-inch and up, £9 to £10; 7 and 8-inch, £8 to £8 5s. Lower port pine and spruce—9-inch and up, £8 10s. to £9; 7 and 8-inch, £7 10s. to £7 15s. Liverpool reports indicate a healthier tone, but the lethargy in trade continues and the best that can be said is that things are more hopeful. Sawn timber is in poor demand. Prime lumber is firmer. Inferior grades are too plentiful. Spruce deals are strong but the market is tender. Birch is plentiful. Ottawa and Lower Port pines are weaker. Hemlock is just about steady.

United States.

The fourth of July celebrations in the United States made business of all kinds dull. The volume of the lumber trade was materially affected. Many lumbermen went away on holiday trips. At Chicago the yellow pine situation continues to improve and several of the items which were weak have been advanced. Manufacturers evidently are maintaining the strong stand, recently taken. Hardwoods in Chicago are only steady. The upper grades are in good demand and prices are firm, but the low grades are difficult to sell at any price. Some improvement is noted in hemlock at Chicago, which is probably due to the betterment of yellow pine conditions. At Minneapolis the northern pine market shows no change, although midsummer dulness seems to be near at hand. The June business was fairly large and probably supplied most of the active demand until the fall. City retail business has fallen off somewhat. It is believed that the fall trade will almost be normal. Dimension timbers at

SARNIA, ONTARIO

Minneapolis are weak. Lath are cheaper, although there is no over-supply. Uppers are firm and some items are stiffening. Siding is scarce. Low grades remain dull. Box factories are not buying until business increases and railways have not yet commenced buying grain-door stock. Red cedar shingles are quiet though holding the advanced prices. For coast shipment they are firm at \$2.63 for extra stars, and \$3.14 for clears on a 55-cent rate. Supplies continue to decrease and receipts are light. West Coast fir and red cedar are not in so strong demand. At Buffalo the demand for northern pine continues to improve. There is even some betterment reported in the low grades. Pattern stock is moving freely. List prices are firm. Hardwoods are dull at Buffalo, though inquiries seem to be increasing. The demand for common grades of oak is fair. Chestnut is also inquired for fairly well in both upper and lower grades. Birch, beech and maple are the most active hardwood, and gum is quiet. A shortage of hemlock stocks is reported at Buffalo, with the demand good. At Chicago, car building material orders are turning up in small quantities. Fir is becoming more of a favorite for car and tank material. Timbers are in poor demand. Red cedar shingles at Chicago are firm at \$3.27 for clears and \$2.75 for stars. White cedar stars are easier at \$2.80, though some firms are getting \$2.90. Hemlock lath are firm and scarce. At New York, northern pine wholesalers are a little more optimistic. Suburban yards are getting lower in their stocks. During the last fortnight orders have been slightly increased from these sources. Hardwoods are dull in New York. Cooperage at Chicago is dull and prices are unchanged.

Market Correspondence

Low Prices Prevailing at Ottawa.

Ottawa, July 12.—The lumber trade in the Ottawa valley has been marked by some recent lowering of prices. Dealers and manufacturers assert that in the main sorts of white pine or spruce no permanent changes have taken place, but lath and shingles are noticeably cheaper than a month ago. Pine dressings, shorts, sidings and mill culls generally sell for the minimum rate given in the classified list in the "Canada Lumberman." Where large lots are bought the sale is sometimes made even below this scale. With the rather dull market, quotations might be expected to sustain a further slump, but the big producers refuse to submit to any such conditions. Several middlemen told the "Canada Lumberman" that they were not receiving as much for lumber as they did a year ago, but inquiry at J. P. Booth's mill, where the largest shipping is done, elicited the information that no change had been made in the prices there since the summer of 1908. The unsettled state of the American tariff is given as a reason for the falling off in sales to many of the buyers across the border who in other years would place large orders. The small amount of duty that is in dispute would not affect the contracts for its intrinsic worth, but the importers desire to know exactly what the Customs rates are before ordering. Considerable as is the influence of the tariff situation on sales, the hindrance to shipping is still greater and frequent notices are received not to forward lumber until the American tariff bill is passed. Some 40 million feet of the J. R. Booth output goes to the United States, and much of that is being held until the Customs' rates are settled.

Lath has dropped from 25 to 75 cents per thousand. The market is flooded for the time with the 32-inch variety, which sells usually from \$1 to \$1.50 per thousand and sometimes as low as 90 cents. The short lath can be made from slabs that would be unfit for the four-foot lengths, and sawmill owners have put an abnormal quantity of them on the market, Hawkesbury and the Temiskaming district being the chief sources of supply. It is believed that soon the longer lath will improve in demand and consequently many holders of the stock are keeping the prices up.

The active demand that existed some time ago for the upper grade of shingles is not so apparent now and prices show a downward tendency. The XXXX and clear butts are from 25 to 50 cents cheaper than a year ago. There is a firmness in the lower sorts, due chiefly to the brisk building operations in Ottawa and vicinity, which has not been equalled for many years. This boom does not affect the general consumption of lumber enough, however, to stimulate the market and the benefit is felt chiefly by the dealers.

Spruce and hemlock are sought more than pine in many quarters of the Ottawa valley. Prices are rather firm for regular lengths and widths of spruce, for instance, 13-foot pieces $1\frac{1}{4}$ x 9 inches, and pieces 14 to 16 feet $1\frac{3}{4}$ x 9 inches are much in demand by New York buyers and command from \$19 to \$20 per thousand. The mill run of spruce is merous that handlers of lumber find it pays to do the sorting, though it steady at \$17.50 to \$18. The inquiries for the selected lots are so numerous that it is hard to compete on the Montreal market with the shipments of this lumber from the East. The price of hemlock is firm at from \$13 to \$15 per thousand, and the increase in its use has depressed the value of mill cull and shipping cull pine a dollar or so a thousand.

The market in railway ties is dull but lumbermen who handle them nearly all supply telegraph poles also, and the buoyancy in that branch of the trade makes up for the quietness in the tie market. Long telegraph poles are almost impossible to get. The 60-foot length with 7-inch top bring from \$16 to \$18 each; lengths from 40 feet to 55 feet, 7-inch top, range in price from \$4.25 to \$13.50, the advance being three or four dollars for each additional five feet when lengths surpass 40 feet. The 25-foot lengths, 6-inch tops, are plentiful and are quoted at one dollar each; 30 feet, \$1.50; 35 feet, \$2.50. These figures are only for 6-inch tops, and the same lengths are considerably dearer in 7 and 8-inch tops.

Water power is at its best in the Ottawa river and all the mills are producing to the full of their capacity. The drive is coming down satisfactorily, the only complaint being from pulp manufacturers. The E. B. Eddy Company is short of pulp wood on account of the enormous quantity of pine logs in the Ottawa river, and it is proposed that the large mill owners, including Booth, W. C. Edwards Company, Hawkesbury Lumber Company and Shepard & Morse store some of their logs in the main stream in order to let the spruce timber pass to its destination, and no doubt this will be done.

Spruce Deals Stiffening at St. John.

St. John, N.B., July 9.—Since last writing important developments have occurred in lumber trade circles and in the particular lines in which local manufacturers and dealers are interested. The chief of these has been the long expected stiffening of prices in spruce deals for export, to the English markets. Another has been the slight weakening of prices of cedar shingles, which is not considered of great importance by local dealers. A third incident of importance is the purchase by an American syndicate of the plant and properties of Wm. Currie & Company, of Campbellton.

The latter transaction is the latest of a number of important purchases made by American investors during the last five years in the Maritime Provinces. The policy of the purchasers has been invariably one of expansion, improvement of facilities and more complete equipment of plants. The purchases include some of the finest timber limits in this province and in Nova Scotia.

A feature of the trade is the remarkable scarcity of spruce clapboards. This line of goods, which fifteen years ago was a very important one, has gradually grown less important, the output having grown smaller and smaller. This curtailment has been due to the increasing scarcity of suitable logs. Local manufacturers are able to dispose of all the clapboards they are able to produce at substantial prices. The newest quotations on spruce clapboards (with few offering) are "Extras," \$42 per thousand; "Clears," \$39, and "2nd Clears," \$37, f.o.b. St. John.

The conditions of trade in connection with "English" spruce deals are of a decidedly more encouraging nature to all who are interested in the manufacture thereof. The improvement has been long looked for and it is generally considered in the light of the first symptom of a general upward trend in prices of this line. While there have been many rumors and many indications of a betterment in "English" spruce, it was not until the last fortnight that there have been tangible local indications of improvement. Prices are firmer, buyers display much more interest and the increasing enquiries are all indicative of a period of stimulus such as has not materialized since the slump in values which took place in the spring of 1907, and which lasted with monotonous persistence until the present summer. It is hardly probable that, speaking generally, local lumbering concerns will allow the present indications of better business to lead them to readjust their season's plans in the direction of an increase in their season's output or (if the ideas expressed are a standard by which to judge) in the volume of their winter's logging operations. On the contrary, every indication points to the conclusion that local manufacturers and dealers will pursue a most conservative policy in shipping and in production of lumber for many months to come.

Local stocks of "English" spruce would aggregate from six and one-half to seven millions of feet. An enquirer would be quoted \$14.50 to \$14.75 per thousand superficial feet on a specification of spruce deals containing say, 50 per cent. sevens and eights, 40 per cent. nines and 10 per cent. elevens and wides, f.o.b. steamer St. John.

When it is said that the present weakening of the price of cedar shingles is not regarded as important, the statement is made with the fact in view that the hot season brings always a period of depression in trade of the New England States, which depression acts directly upon prices. It is generally conceded that what little ground has been lost will be regained so soon as the cooler weather approaches and building generally has increased in consequence. Local quotations on shingles are \$2.75 to \$2.85 on dutiable "Extras" and \$2.25 to \$2.35 on dutiable "Clears," f.o.b. schooner St. John.

Mr. Frank Southern, of James W. Southern & Son, Limited, timber importers and box and case makers, Manchester, Eng., favored the "Canada Lumberman" with a call, when in Toronto recently. Mr. Southern reports that the English trade is improving and that English purchasers are buying largely of Canadian spruce as well as the Baltic stuff.

A Hollow Blast Grate

that is

Cheaper than a Draft Grate

Such is the durability of the GORDON HOLLOW BLAST GRATE that, although its first cost is necessarily greater, in the end it is infinitely cheaper than any draft grate ever made.

There are many outfits in use to-day that have been in service for from FIFTEEN TO TWENTY YEARS.

But the principal advantage in installing this celebrated grate is that it ADDS FROM 25 TO 50% TO THE EFFICIENCY OF A BOILER, and that it GIVES AS GOOD RESULTS WITH WET, GREEN OR FROZEN SAWDUST OR SLABS AS A DRAFT GRATE GIVES WITH DRY WOOD.

It also renders you ABSOLUTELY INDEPENDENT OF THE WEATHER, and SAVES LABOR IN FIRING.

Equally efficient in ordinary furnaces or Dutch ovens.—Adapted for any number of boilers, from one up.—No change in construction necessary. A hole must be made through each wall, for the pipe, aside from this, not a brick need be disturbed.—The largest outfit can be installed between quitting time Saturday and starting up time Monday morning.—No difficulty about maintaining a fire at night, when the blower is idle, and no objection to so doing.

While the "TUYERE" renders the blast grate bar largely self-cleaning, we also provide it with a BLOW-OUT.

Sold ON APPROVAL, subject to THIRTY DAYS' TEST, counting from date of installation. In case of rejection, WE PAY THE FREIGHT BOTH WAYS.

Our president, our secretary and treasurer, our designer, our superintendent and our foreman have all been connected with the Gordon Hollow Blast Grate Company for nineteen years, while our vice-president has acted in that capacity for fifteen years.

Our services are therefore those of experts. We also manufacture

Ontario

The Lufkin Rule Company has begun work on a new extension to its factory at Windsor, Ont.

The Pembroke Lumber Company have purchased Geo. M. Rawlins' planing mill at Pembroke, Ont.

G. Y. Wood's planing mill at Dundalk, Ont., has been burned with a loss of \$3,000; insured for \$1,600.

The James Smart Company, Brockville, Ont., have purchased the planing mill of John Briggs & Sons in that place.

L. Christie has installed a new planer in his sawmill at Fort Frances, Ont. The planing mill has a capacity of 50,000 feet per day, while the lath mill turns out 40,000 feet.

Toronto Boxbarrel Company, Limited, Toronto, has been granted an Ontario charter. Among the incorporators are Frank Denton, K.C., and W. Eberts Brown, both of Toronto.

George Wood & Sons' planing mill and sash and door factory in Markdale were destroyed by fire. The blaze is supposed to have originated from a smoldering spark in the sawdust.

Briggs & Sons planing mill, one of the oldest concerns in Brockville, Ont., has passed into the possession of the James Smart Company, which adjoins the premises. The mill will be considerably enlarged.

The planing mill of G. Y. Wood, Dundalk, Ont., was destroyed by fire recently, causing damage of \$3,000 to the building and machinery. The cause of the fire is not known. The mill was insured to the extent of \$1,600.

The Spiesz Furniture Company, Limited, Hanover, Ont., capital \$60,000, has been incorporated to manufacture and buy and sell lumber, furniture, and other products of the sawmill and furniture factory. H. and J. J. Speisz and Frederick Ahrens, of Hanover, Ont., are incorporators.

The promoters of the new company which proposes to erect a furniture factory in Strathroy, Ont., are J. A. Minchener, S. M. Smyth, H. E. Mihell, James W. Cameron and W. P. Dymonds. A by-law to loan the company twenty thousand dollars for twenty years for the erection of a new furniture factory was carried by a large majority.

A syndicate of New York and Boston capitalists is to take over the Bruce Mines & Algoma Railway, with a charter and government grants, running from the north shore of Lake Huron to Hudson Bay. The projectors are heavy lumber producers, and will extend the road from its present terminus into the great timber tracts of Ontario and the northwest territories.

A 6-year forestry course will be added to the course of study at Toronto University at the coming term. Students taking the course will qualify for arts and forestry degrees simultaneously. This course is in addition to the 4-year course already in existence, and is established for the purpose of creating better educated foresters. The practical work will be done hereafter in October and November of the fourth year.

The Polson Iron Works Company, Toronto, have applied to the city for a lease of fifty acres of land at the east end of the bay, near Keating's Cut, and it is their intention to enlarge and improve their plant. A general shipbuilding plant will be installed on a large scale, and in connection a floating drydock capable of taking in the largest of the lake-going vessels. The drydock is to be built in sections, and when the Welland Canal is deepened, which is shortly to be done, the drydock is to be further enlarged.

A shipbuilding industry, which will have the largest yards on the Canadian lakes, is assured to Port Arthur, Ont., through an agreement between the Council and the Western Drydock & Shipbuilding Company, which is composed mainly of Cleveland capitalists. F. Bowman, of Southampton, Ont., is also a member of the company. The terms of agreement call for the prompt construction and operation of a yard wherein ships of the largest tonnage on the lakes may be built, and also of a drydock capable of handling such vessels. The company will employ three hundred men from the start of operations on construction, and later will have a thousand men on the payroll.

The Cornwall Furniture Company sold \$25,000 worth of stock at par. Then the town of Cornwall gave the company \$15,000 bonus, and the company divided \$15,000 worth of stock among its shareholders free when this bonus was received. After six or seven years' running the company became insolvent in January, 1909. The creditors, many of whom are Ottawa firms, are claiming that these shareholders who got the \$15,000 worth of stock free should pay up for it now to cover the debts of the company. The local master at Cornwall decided they should, and these shareholders appealed. The case came up before Justice Britton recently, and he confirmed the previous decision.

The paper mill plant of the Montrose Paper Company, Limited, of Thorold, Ont., is to be sold by tender to the highest bidder. H. Vigeon, the liquidator of the company, announces that tenders will be received on the mill property and equipment, water power and water wheels, all valued at \$106,260; also on the finished and unfinished product of the mill, which has not been sold. This latter is valued at \$20,819. Tenders on these two parcels were received by George Kappele, the official referee, at his office in the Home Life Building, Toronto, Ont., up to 4 p.m. July 14, and were opened the following day at 11 a.m. at the same office. The Montrose mill is located on the old Welland Canal, has good water power and makes a high grade paper.

Eastern Provinces

Luther B. Smith's sawmill at Maillie station, about three miles from Fredricton Junction, N.B., was burned down. There was \$4,000 insurance.

B. W. S. Titus' mills at Glen Titus, near Uffam, N.B., have been burned down. Loss, \$3,500, with no insurance. About 25 hands were employed.

Charles Miller's cooper shop at Pokiok, near St. John, N.B., was damaged by fire, and a large quantity of hoops and staves burned; covered by insurance.

Isidore Paquin's furniture factory at Hull, Que., was damaged to the extent of \$4,000 or \$5,000 by fire resulting from a benzine explosion. No insurance.

Jignac & Beland's sash and door factory, in St. Roch's, Que., was de-

stroyed by fire, together with a large stock of finished articles. The loss will approach \$200,000.

Desnoyers, Varin & Company, Limited, Montreal, capital \$95,000, have been incorporated to manufacture lumber. W. Reed, l'Assomption, Que.; T. Desnoyers, Maisonneuve, Que.; V. Varin, of Montreal.

Dickie & McGrath's lumber mill at Tusket, N.S., one of the finest in the province, was totally destroyed by fire. Loss about \$50,000, mostly covered by insurance. The fire is supposed to have started from the upsetting of a lantern used by some men repairing the machinery.

The Peace River Trade & Navigation Company, Limited, capitalized at \$1,000,000, has just been formed in Montreal. The charter, which has been secured from the Dominion Government, is a very wide one, and enables the company to engage in lumbering, mining and colonization work.

Messrs. C. H. Lovell, M.P.; M. Cummings and W. K. Baldwin, of Stanstead County, Que., have just completed the purchase of a big tract of timber land from the Provincial Government. The tract, it is understood, is 100,000 acres, and the price \$1 per acre. It will, of course, be subject to stumping dues. It is located in northern Quebec.

British Columbia

A. Berquest will soon erect a sash and door factory at Sydney, B.C.
W. Beach, of Seattle, Wash., will build a shingle mill at New Westminster, B. C.

Frank Huston will build a saw and planing mill at Vancouver, operated by electricity.

The Fletcher Lumber Company, Limited, Wainwright, Alta., has been incorporated.

Ruby Lake Lumber Mills, near Dauphin, Man., have been destroyed by a forest fire.

The Bowman Sine Lumber Company has been registered in the Province of Saskatchewan.

The Maycock, B.C., Lumber Company's plant was destroyed by fire with a loss of \$100,000.

McCormick Company will establish a sash and shade factory at St. Boniface, Man., to cost \$15,000.

The Crescent Lumber Company, Limited, has been registered in the Province of Saskatchewan.

John Hanbury will erect a modern sawmill south of False Creek, B.C., with a daily capacity of 75,000 feet of lumber.

The Lewis Furniture Company has purchased the old Royal Furniture Company, Winnipeg, and will extend same.

The new foundry at Schaafe's Machine Works, New Westminster, is now in operation and adding greatly to the facilities of their well known plant.

The Barnett & McDonald Company, New Westminster, will probably add two new machines to their shingle mill. The new sawmill and box factory are just starting operations.

The woodworking plant of the Walsh Sash & Door Company, New Westminster, B.C., have started a night shift in order to keep up with their orders and turn out five hundred doors per day.

Work is to be shortly commenced on a large shingle mill to be constructed at Esquimaux, adjacent to the E. & N. Railway line, to cost \$150,000. The wharves and buildings will be commenced in June.

The boom towing tug "Superior" was put out of business on a recent trip up the coast from Vancouver. She ran full speed against a bluff, smashing her up badly above the water line. It is said the man at the wheel was asleep.

At this writing, says a respatch from Edmonton, lumbermen are alarmed at the rapid rise of the Saskatchewan. Millions of dollars' worth of logs have been lost in the last three years, and in spite of frequent petitions the Dominion Government refuses to construct a breakwater.

A small sawmill located at Jedway, on one of the Queen Charlotte islands, about 150 miles south of Prince Rupert, was destroyed by fire on June 19th. While the mill was a complete loss, much of the timber in the yards was saved. The mill was owned by H. & H. A. Bourne, of Jedway.

At New Westminster recently a farmer named Dunkey sued the Brunette Mill Company for damages caused by logs belonging to the defendant company forming a jam in Brunette creek, thus diverting the current, which undermined and carried away—so the plaintiff alleged—a considerable portion of his land. Dunkey was awarded \$50 damages, but was held liable for part of the costs in the action brought.

Among recently incorporated companies to carry on a lumber and sawmill business, in British Columbia, are: The British Columbia Sash & Door Company, capital, \$50,000. This will acquire the business of E. O. Lyte, in Vancouver; and the Abbotsford Timber & Trading Company, capital, \$300,000. Edgewood Lumber Company, Limited, capital \$30,000; Bay City Sash & Door Company, Vancouver, head office, Bellingham, Wash., capital \$15,100.

The mill of the Three Valley Lumber Company, at Three Valley, B.C., which was destroyed by fire several weeks ago, is being rebuilt with all possible speed, and it is the intention of the company to place the new machinery in position in the various parts of the mill just as fast as space is provided. The sawmill machinery has been ordered from the Waterous Engine Company, of Brantford, Ont., through Mr. H. B. Gilmour, the firm's popular and enterprising Vancouver agent. Mr. S. A. Mundy and his partner, Mr. John McCrum, of Bradford, Pa., say the new mill will be superior to the one destroyed in every respect. The planing mill machinery installed will be obtained from the American Wood Working Company. The new plant, which will have a capacity of 100,000 feet a day, will be ready by October 1st.

The Western Canada Pulp & Paper Company, at Vancouver island, has secured a water record on Marble creek, Quatsino Sound, capable of developing 10,000 to 15,000 horse-power. The power is permanent the year round. The new plant of the concern, when completed, will have a capacity of 600 tons per week of news and wrapping paper. The cost of manufacture is estimated to be as low as \$30 per ton owing to the favorable environment of the concern. These figures are arrived at by the statement that a ton of chemical pulp from spruce or hemlock can be manufactured at less than \$3 per cord on the island, whereas the same quantity costs from \$6 to \$9 in eastern Canada. The plant will be under the building supervision of C. B. Pride, of Appleton, Wis., and this gentleman expects to have the pulp mill in operation by December of this year.

YOUR OUTPUT

of FLOORING, CEILING and SIDING improved and increased by adopting a SYSTEM OF SHIMER CUTTER HEADS

which systemize the work in planing mills and solve the problem of economical woodworking. They last long and cost little. Made of Steel Forgings of 60,000 lbs. tensile strength they represent the strongest combination possible to meet every emergency.

The illustrations herewith show the compact and workmanlike manner in which the Shimer Cutter Heads are constructed—how the vital principle of clearance is applied to all leading bit points—how the alternate and shearing effect of the cut reduces to a minimum the tearing out tendencies in working cross-grained lumber. A study of the illustrations will also show that the Bits have the exact shape in their exterior circles, insuring that a uniform product will be maintained indefinitely without extra trouble and expense. Through the "make-ready" built into the Shimer Cutter Heads your workmen are relieved of the labor connected with filing and re-filing straight bits to pattern—the lining up of such knives and other needless worries.

They are not an expense, but they save expense by giving you an easier and faster way of getting out your work. Address

Miscellaneous Items of News.

The Chaudiere Lumber Company, of Quebec, is suing the Quebec & St. Maurice Industrial Lumber Company for \$126,775, for a disputed account for wood sold them.

Donald Cameron, 69 years of age, a well known retired lumberman, died at his home at Windsor, Ont., on Saturday, July 3rd, after a short illness. He is survived by a widow and two sons.

Alder-May & Company, who are one of the largest United States manufacturers of cypress, oak, poplar, etc., will open, on July 15th, an office in the Times Building, New York City. Canadian inquiries should be sent to head office at Atlanta, Ga., as heretofore.

Readers of the "Canada Lumberman" will join us in wishing long life and happiness to Mr. and Mrs. A. E. Cates. Mr. Cates is the well known secretary of the Ontario Lumber Company, Toronto. He was married to Miss Marion Edith Rushbrook, of Toronto, on June 30. Mr. and Mrs. Cates spent their honeymoon at Niagara and on a trip up the Northern Lakes.

The appeal to the Supreme Court in the case of Lilly v. Johnston, relating to the matter of extra provincial companies doing business in British Columbia has not yet been argued. The Premier of British Columbia has stated that there is a possibility of a measure being introduced similar to the "Foreign Corporations Act" passed last year by the British House of Commons. This would probably remove all cause for complaint.

The South African trade in wood and timber is considerable, the total for last year, including teak, amounting to over \$2,700,000, of which Canada's share was only about \$115,000. One would have thought that the Dominion, with her immense resources, would have made a better showing than this, especially when the preference and the favorable shipping rates are taken into consideration.—Canadian Trade and Commerce reports.

George W. Sisson and I. B. Barnett, of Potsdam, N.Y., are inspecting a tract of land recently purchased in New Brunswick by the A. Sherman Lumber Company. There are about 650 miles in the tract, which extends from Bathurst on the coast inland along the Nepisiguit river, and is all virgin country. Mr. Barnett will spend about four months going over the land, locating timber and surveying it preparatory to beginning lumbering operations.

The manager of the Canadian-Mexican Pacific Steamship Line states that all arrangements have been completed for a regular and continuous service, and that his line is in a position to carry all eastern Canadian cargo offering. As already reported, negotiations are still going on in respect to the matter of rates. It has been made clear that the rates quoted so far are not sufficiently attractive and will not enable eastern Canadian manufacturers to compete with foreign countries.

The display in the Manufacturers' Building at the Canadian National Exhibition this year promises to eclipse anything ever seen there before. Every inch of space in the building, which covers two acres of ground, was applied for three months before the opening of the Fair, and as more applications are pouring in every day, the management have been able to select exhibitors who put in an attractive display. There is no better evidence of the growing popularity of the Canadian National than the anxiety of the manufacturers to display their wares there.

The Lidgerwood Manufacturing Company have issued Bulletin No. 52, in which they show a full line of heavy logging engines designed particularly for Pacific coast lumbering. It is interesting to note that in addition to its full line of special logging engines built for lumbering in the East, the Lidgerwood company have found it desirable to design and build a complete line of engines to handle the heavy logs of the Pacific coast. Two groups of engines are shown in the bulletin, "yarders" and "road engines." The engines embody a number of valuable and exclusive points which will repay careful investigation by intending purchasers.

The Department of Indian Affairs has sold at public auction timber berth No. 2, embracing 5¼ square miles in the Dokis Indian reserve in the Nipissing district. There was a large attendance of lumbermen and spirited bidding ran the price up to \$64,700, at which figure it was bought by the Georgian Bay Lumber Company. The money will be funded by the Government for the Indians on the reserve, several of whom have acquired considerable wealth as the result of these sales. The berth in question was sold once before, but the purchaser did not complete the terms of the transaction. The sale was conducted by Mr. Peter Ryan.

After an absence of over fifteen years from the city, Mr. Geo. F. Ryan, general manager of the Phoenix Assurance Company, of London, Eng., revisited Vancouver recently, accompanied by Mr. E. A. Boston, assistant manager. Referring to the contrast of the city of fifteen years ago and the city of to-day, Mr. Ryan said: "It is a remarkable change, one that could hardly be believed unless seen. Why, back in '94 it was a hamlet, nestling about Granville street and the waterfront. We have seen many cities on our tour, but none to compare with this for rapid and substantial growth. Vancouver is indeed destined to be a great city. Mr. Boston joined in the tribute.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

We Challenge!

Here's Our Address

and

**THE SOONER WE
MEET—THE BETTER**

Why Do We Challenge—Because

the quality and manufacture of our lumber products are the best that modern methods and personal supervision can make them, and are therefore giving the best satisfaction to our customers, and so we hand you here our address in the belief that "The sooner we meet the better."

"There are none better because there are none better made.
Good reasons—Good Stock."

Here is what We Manufacture

In Lumber In Shingles

Our well-known "Silk Finish" Quebec Spruce needs no introduction except to say that it's "as good as ever" and the best ever.

The Fenderson Brand New Brunswick White Cedars. Prompt Shipments. Quality Goods.

Keystone Saw, Tool, Steel and File Works

Philadelphia, Pa.

The Madison Williams Manufacturing Co., Limited

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

WE CAN ALSO INTEREST YOU IN

R. H. SMITH CO., Limited

— St. Catharines, Ont. —

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE**, as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"
REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

PETERBORO SAW MILLS

Some of Our Shingle Machines

The PERFECTION is a power driven machine, having a capacity of more than thirty thousand perfectly made shingles per day of ten hours.

It can be run to its full capacity with fifteen horse power.

Notice that the carriage is driven from both sides preventing it cramping.

From the view-point of Economy, you cannot buy a better machine than our GRAND TRIUMPH.

Any good operator can cut thirty-thousand shingles in ten hours, and many men have done better than that.

With this machine all of your bolt can be cut into shingles—there is no spalt left at the end.

Ten horse power is sufficient to drive it.

You will be interested in Our Shingle Machinery Catalogue, which we will send anywhere on Request.

The Best Argument

You cannot gather figs from thistles nor can we make good flooring from poor lumber. We don't try to do it. Our flooring receives skilful workmanship and this combined with the high grade lumber produces a strictly first class product.

Manufactured in 3/8" end matched **Birch, Maple or Oak.**

"I Am Convinced
**Simonds
 Shingle
 Saws**
 Have Saved Me Money"

A man bought nine 10 inch Simonds Shingle Saws.
 He wanted the best and paid the price.
 He knows whether he won or lost on the deal.
 A careful record of Shingle Saw cost was kept, with
 the result that after a few months the record showed, in
 that mill, the saw cost per thousand shingles cut to be
 slightly less than one-half of one cent. About 9 cent
 saw cost for twenty thousand shingles.
 That is why this Millman said he was convinced
 Simonds Saws are *money makers* because they are *cost savers*.
 This is a statement of fact. We have the proofs and

will gladly show them. If you want low cost use the
 right saws—Saws made of Simonds Steel, made by
 Simonds Methods. Dollar for dollar value is given. A
 saw to sell for less money than the Simonds cannot be as
 good. It cannot run as economically, and it will not
 make the same profit for you in the long run.

More shingles mean more money from the same block
 of wood.

For shingle saw prices and particulars, address our
 nearest office, giving size, number of teeth and gauge of
 saw desired.

We are Specialists on Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made
 a close and constant study of this specialty, em-
 bracing not only "The Best Protection at the Min-
 imum Cost" in the sense of Policies in the Strong-
 est Companies at the lowest possible rates, but
 the enhanced Protection of such Policies so word-
 ed as to Insure you under whatever form of sale
 or undertaking you may make with your customers,
 unaware as you may be of the application of the
 Canadian Insurance Law in such instances.

We invite inquiry as to the above and our
 "ADVICE SHEET" system which we originated
 several years ago for the special convenience of
 our Lumber Customers.

We personally inspect each of the plants we in-
 sure at least twice a year.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 29

Toronto, August 1, 1909

No. 15

B. C. Commission's Important Task

The announcement of the personnel of the British Columbia Forestry Commission, will probably be received by the lumber industry of that province as an earnest of the Government's intention to enact and carry into effect whatever laws are found to be necessary for the benefit of the industry and of the province's share in it. Already the Government is to some extent pledged to make the licenses perpetual. Whether this is done or not, the appointment of the commission so soon after the close of the legislative session leads to a hope that effective steps will be taken without unnecessary delay to render investments in British Columbia timber more permanently secure than they have been. The problem is fraught with many intricacies which will need delicate handling. Where the aims of all parties, however, are so identical, namely, the preservation of the province's resources, and the placing of the industry on a sound economic basis, there should be no insurmountable barriers in the path of acceptable reform. The Vancouver weekly "News Advertiser," in an editorial reference deals with the question in a general but acceptable fashion. Its views are perhaps effected somewhat by the political atmosphere in which it lives, but they are none the less to the point. Its remarks are as follows:—

"The Government is endeavoring to the utmost of its ability to bring about a condition of affairs relative to our timber wealth similar to that of our mining resources, and while in regard to timber it has problems to cope with as difficult as those involved in the sister industry, if not considerably more so, we may safely anticipate that laws will be enacted within a short time which will require no drastic emendations for many years to come. The forest asset of the province is so large a one that it is only fair to anticipate a public revenue yield therefrom commensurate with its intrinsic value, but it is possible to understand the feeling of

private persons or corporations who wish to know as exactly as possible what charge will be levied on their property and that the figure will not be subject to disconcerting changes at short notice, and also that their title, in whatsoever form it may be drawn, is good for a reasonable number of years. The Government in its choice of the personnel of the Commission, has selected men who will bring to bear an open mind on a highly important issue. They may safely be regarded as without bias on any of its aspects, and therefore as capable of truly balancing the immense amount of evidence which it will be their duty to sift. It will remain for the representatives of the various interests involved in the timber and lumber industries to give their opinions in the utmost of good faith, and to lay before the board all available figures and facts bearing on the issues at stake. Only by this means will the gentlemen with whom will rest, subject only to the final endorsement of the House and the Government, the drafting of laws equitable and to all intents and purposes permanent, be able to do their duty as they would desire on behalf of the public demesne and private capital invested or desirous of investing therein."

English Lumber Trade Situation

The situation of the lumber business in England so far as it concerns Canada, is rather a peculiar one at the present time. It is apparently just on that doubtful margin which leads some people to believe that it has already made a change for the better, and yet which others are inclined to look upon as unsatisfactory. The various reports to hand regarding the half-yearly trade, which are summarized elsewhere in this issue, are of a nature to show at least that trade conditions are not unduly extreme in either one way or the other, and that if the improvement which has already commenced in other countries and in other lines of business is continued, the lumber business will be able to fall in with the procession and jog along pleasantly until normal trade returns.

The most hopeful sign of possible improvement is the reduction of stocks. At London, nearly all descriptions of landed stocks have been worked down to very modest dimensions, and holders are justly confident of realizing at improving rates, seeing that such stocks cannot now be replaced at the present level of f.o.b. prices. Shippers will, no doubt, take full advantage of the situation. F.o.b. rates have already been considerably advanced for most current descriptions of wood. If stocks for shipments are generally very light, as is claimed, no harm can come of a legitimate improvement in market rates, so long as consumption can take care of the importations, as at present promises to be the case.

The soundness of the f.o.b. situation is further explained by the lesson taken to heart by the majority of importers as to the danger of speculation, or, as it was formerly termed, intelligent anticipation of customers' wants. The "Timber Trades Journal," discussing this point recently, said:

"The last few years have proved that the speculative buyer has done little good to himself by the purchase of a few parcels at comparatively cheap rates, as, while his travellers have managed to make a moderate profit on these low-priced contracts, they have generally contrived to depreciate the value of the rest of the stock. These transactions, repeated as they were in many quarters, resulted in imparting an amount of nervousness to the market in general which was wholly unwarranted by the general state of trade in the country, unsatisfactory as this may have been. The timber trade, which was formerly one of the soundest in the land, has lately been undermined by this cutting of quotations on the part of firms determined to do business at any cost, and the result has been unsatisfactory trade and diminished profits, if not positive loss, for the majority of importers, especially those in the London district. This suicidal policy was, of course, bound to work its own cure, but the reaction has been long in making its effects felt, and it is to be hoped that, now that it has apparently set in, the situation will not again be ruined by over-sanguine speculation. As far as stock lists are concerned, there appears to be some reason to anticipate a shortness of supply this autumn; but it is hardly necessary to remind our readers that anticipations in this direction more often than not have been unfulfilled, and that, from one quarter or another, goods have been forthcoming which have altogether altered the complexion of affairs. So far,

English buyers this year have exercised considerable prudence in limiting their purchases to actual requirements, and, as long as they continue to do this, there is every prospect of a continuous moderate improvement in trade.

"The feature in the market this year has undoubtedly been the firmness of plank sizes. For the first time for many seasons sellers have not made a point of pressing upon buyers a large proportion of broad dimensions; the tendency lately having been to diminish the quantity as far as possible. We have already alluded to the 'corner' which was stated to have been established in deal sizes, especially 3 x 9-inch, and adhere to our opinion that the matter has been greatly exaggerated, although there are not wanting many who maintain that the scarcity in the market of 9-inch goods arises from the manipulation of certain London dealers. For ourselves, we are inclined to attribute the diminution of

stocks and the absence of plank sizes from many specifications to the demand which has arisen from the railways and, in particular, the paving companies."

At Mersey ports stocks of Nova Scotia and New Brunswick pine and spruce have been materially lowered. At Clyde ports, in spite of a dull demand, stocks are low enough to warrant higher prices. There is a general tone to the reports received which indicates hopefulness as to the near future. The depression of the past year or two, however, has been a severe strain and the slow recovery of the last six months was really to be expected. It can scarcely even be termed recovery. It is in the nature rather of a stemming of the tide which was formerly flowing so strongly in the wrong direction. With care from now out it should be possible to turn the tide definitely in the proper direction in the course of a few months.

Greater Cooperation Needed to Deal with Lumber Problems

Lumber producers have perhaps given greater attention during the last year or two to the matter of cheaper production than to anything else. Unsatisfactory conditions of business have induced them to study matters which would otherwise obtain little attention. Dull times and low prices have been the factors which led to this, and to that extent the dull times have been a blessing in disguise. It is unfortunate that some means is not available for collecting and disseminating the experience which is gained in this manner, as it would be of great benefit to all in the business. Lumber producers who make a study of these things, however, are not in the habit of handing on the knowledge gained to others. There is not much communication of information of this sort among the manufacturers, possibly perhaps because of a faulty conception of business competition and possibly also on account of lack of favorable opportunity. Every manufacturer, therefore, has to work out his own problems and apply his own remedies for practically every new difficulty which arises, whereas, hundreds of others have worked out practically similar problems in the past, or will have to work them out in the future. The "Canada Lumberman" does what it can to assist in the spreading of useful information of this nature, but it depends largely upon the co-operation of those whom it serves. It would be to the benefit of all concerned if lumbermen would recognize more fully that the columns of the "Canada Lumberman" are at their service for the publishing of all interesting information for the benefit of their fellow manufacturers and dealers.

The losses to which lumbermen are subject are so continual and widespread that they should be given much more general study than they receive. The sources of loss are manifold. Among them are: deterioration of standing timber in the forests, of logs on the ground or in the pond, of lumber in the pile or even in the drying kiln. The value of lumber is lessened by rot, insect ravages, dote, splits, stain, warping of sawed stocks, and many other causes which prevent it from reaching the consumer in as good condition as it might. Take the case of hard-

wood logs. If they reach the mill within a reasonably short time after cutting and are piled up as lumber, the profits are much greater than if they are allowed to lie for some time before transportation to the mill. Hardwood logs are said to dry very slowly, and although they may seem dry at the ends the centres may be quite green. It may be, as some believe, that this condition causes unequal strains which are discovered when the log is cut, which would account for the fact that many boards after leaving the saw develop splits extending for their full length. If the logs were put through the mill when green the strain would be even throughout and probably many of these splits would be avoided. Logs which are left in swampy locations and places from which it is a matter of much difficulty to haul them quickly to the mill, are subject to many sources of destruction. Some manufacturers prevent much of the damage which might result from this, by painting the ends of the logs. This is to prevent the ends from checking and to make the drying more uniform. Checks and splits may be kept down to a certain extent in the piling by proper cross piling. When in the pile, lumber is liable to stain as a result of fungus growth and of infection from stickers or cross pieces.

These problems and many others, such as the preservation of lumber from injury, by treatment with creosote or by carbonate of soda, are too great for most lumbermen to handle. They must be studied by large associations and governmental institutions. The lumberman is much too busy to take these questions up in a scientific manner, but it is a matter of necessity for him, if he wishes to make the most of his resources, that he should keep in touch with the latest information upon such subjects. The production of cheaper lumber and the proper care of lumber which has been manufactured would go far to solve a number of the difficulties which are looming so large before the manufacturers of to-day as a result of the depletion of timber resources. The "Canada Lumberman" would be glad to hear from its readers on all subjects of this nature, and to publish their experiences or opinions.

Canadian Lumbermen's Association Receiving Widespread Support

The secretary of the Canadian Lumbermen's Association, Mr. Frank Hawkins, has returned from his business trip to the Pacific coast. During the trip his time was largely occupied with business, so that there was little opportunity for him to study business conditions closely. One point, however, with which he was impressed was the tremendous importance of the West to the lumber interests of Canada. There should be no difficulty, he believes, in the Provinces of Alberta, Saskatchewan and Manitoba, absorbing vast quantities of lumber, and with the coast mills in a position to export, he could see nothing but a bright future for the trade, if their affairs are conducted on business principles. With the prospects to-day of a tremendous yield in the harvest fields, the position of the Northwest farmer was practically assured, and there were evidences through the Northwest, of solid substantial improvement in conditions which would not be visible if times with the farmer were not good. So far as the Canadian Lumbermen's Association was concerned, he believed that his trip to the West would have far-reaching effects. Many of the important manufacturers were already with the Association, and

others were coming in right along, so that the Association could fairly claim to be representative of the lumber interests of the Dominion.

The decision of the Association to send its secretary to the West, at this time, was a most opportune one. The Association has been in existence a little over a year and for so young an institution has had an exceptionally successful career. Besides having effected a good organization, it has undertaken a progressive campaign in the interest of its members. The success with which it has already met is now well known to lumbermen in general. During this first year, however, little opportunity was found for conducting anything in the form of a membership campaign. The Association grew of itself, but naturally the membership was largest in those provinces nearest the place of the Association's origin. Ontario and Quebec were well represented, but the West and the Maritime provinces had done little more than evince an interest in the Association. The usefulness of the Association, however, was self-apparent and in Ontario and Quebec the membership grew automatically. Now that the aims of the Association have been placed before the people

of the West, they have been quick to realize the advantages which will accrue from membership, and the secretary has returned to Ottawa with the practical assurance of the co-operation of the whole West.

In the natural course of events it is now to be expected that a visit to the maritime provinces will shortly follow and that similar encouragement will be obtained from that quarter. The next time the Association holds its annual meeting, therefore, which is to be in Ottawa in February, 1910, the indications are that a large representation will be present from all parts of Canada, and that, what may aptly be termed a

Canadian Lumbermen's Parliament, will come into full existence. The Association will then be free to enlarge its activities along numerous lines which have already been mapped out, and along others which will be proposed. One cannot avoid a feeling of satisfaction that at last this practical organization in the interests of the lumber business has come into existence and passed the preliminary stages of its existence successfully. That it has been able to do so is in a great measure due to the energy and enthusiasm of the officers who have held office since the organization of the Association.

Good Opportunities for Flooring in Great Britain

The inactivity which has characterized the lumber trade of Great Britain during the last two years, seems to be disappearing, and at the same time, the changes which have resulted in trade conditions are making themselves strongly felt. Canadian wood goods have been obliged to meet stronger competition than ever before from continental products. They have, however, comparatively speaking, done well, and have even found in some cases new fields to cultivate. In this regard, Canadian manufacturers receive much assistance from the Trade Commissioner service, which is continually on the outlook for new possibilities for increasing trade. The reports of the commissioners in various parts of the world frequently contain valuable suggestions for Canadian manufacturers of lumber and those from Great Britain are exceptionally useful. As an instance, recent reports contained advice regarding the opportunities for selling flooring, in the old country.

The Trade Commissioner for Canada at Leeds and Hull, Eng., reports as follows: "In addition to the varied lines of Canadian wooden goods which now command a successful sale in this part of England, there would appear to be opportunities for introducing two further specialties in the way of wood pulleys and hardwood floorings. Renewed inquiries recently received here from United States sources regarding the demand for the former article, have suggested to local importers the possibility of obtaining these pulleys from Canadian manufacturers, who would undoubtedly receive the preference, prices and other considerations being equal. At the present time, these wood pulleys are being imported from Sweden and the United States and are chiefly used in flour mills, seed-

crushing mills and similar establishments. There is also an increasing demand for hardwood floorings, mainly arising out of the revived interest and enthusiasm shown in this country towards roller-skating, which is said to have resulted in the formation of nearly 130 joint stock undertakings during the last twelve months to operate roller-skating rinks in different parts of the United Kingdom. The importers are experiencing a steady demand for suitable timber for use in the erection of new rinks and for the purpose of repair in those already built, and desire to ascertain what Canadian shippers have to offer in this direction."

The Canadian Trade and Commerce reports contain the following in a recent issue from the Glasgow, Scotland, office: "Business continues to display a regrettable lack of animation, and though there has been of late some little improvement observable, it has not so far made much progress. Apart altogether from how prices are likely to go during the season, the general feeling seems to be that trade prospects are not calculated to induce speculative purchases, and as a consequence the tendency with every one is to carry as little stock as possible. Meantime, prices are as a whole steady, and unless stocks accumulate considerably, brought about by imports being out of proportion to the consumption, the probabilities are that they will be maintained. During the week deliveries from the docks have been moderately brisk, a fair amount of progress having been made with the sale of recent imports, with the exception perhaps of Canadian pine, which is quite unusually slow of sale, due, no doubt, to so many cheaper substitutes in the market."

Commissioners Seeking to Remove St. John River Troubles

It has been pretty clearly brought out in evidence before the international commission appointed to enquire into the logging troubles on the St. John river, in New Brunswick, that the practice of delivering logs at Van Buren, for the purpose of distribution, militates greatly against the expeditious moving of the drives. Mr. John Kilburn, of Fredericton, one of the principal witnesses, stated that since the institution of the booms at Van Buren, driving operations have been rendered much more difficult and expensive. Mr. Kilburn is a man of long experience on the St. John river and its tributaries. His experience there goes back some 52 years. In driving he has worked both above and below the Grand Rapids. From his experience he believed that the effect of stopping the logs for sorting, at any point above Grand Falls, was very serious, as it was most desirable that the Falls should be reached on a fair pitch of water. Otherwise the logs would be broken up. In the last three or four years, he stated, the price of driving the logs had increased from 14 cents to 26 cents per thousand, and the increase was attributable to the one main cause, the Van Buren hold up, or, in other words, the stopping of logs for sorting above Grand Falls. Previous to 1904 there had been but little lumber shipped by rail above Fredericton. Nothing had been done since then in the matter of removing obstructions below the St. Francis river. All logs coming down the river were stopped and sorted at Fredericton regardless of whom they belonged to. Logs which should have been driven this year by June 1, had not reached their destination yet, and he believed that the delay was due to the upper contractors. When explaining the methods in use for sorting logs at the Fredericton gaps, Mr. Kilburn said that he knew of no method of sorting other than by means of distributing the logs by sorting gaps. Possibly some of the increased cost of driving of late years, he admitted, was due to the increase in the cost of labor. Since the existence of the corporation, Grand Falls had never

been reached before July 1, whereas previously he had made the fall about May 20. As to the proposal for sluicing Grand Falls, Mr. Kilburn believed that this would not be possible.

Mr. George C. Rainboth, of Aylmer, Que., a Dominion Land Surveyor, who has been engaged in the survey of the international boundary, together with Mr. J. B. Baylor, the United States representative, stated in evidence that although the treaty called for a straight line from the sources of the St. Croix river, they found that the survey made after the treaty, showed some variations from the straight line. A quantity of further evidence was given and the commission adjourned until a later date.

The taking of evidence upon the question is of necessity a slow process. There are many side issues to be considered which bear more or less strongly upon the merits of the case, and which require careful investigation. It may, therefore, be some considerable time before even a conclusion of the taking of evidence is reached. It will then be the duty of the commissioners to weigh the evidence minutely and announce their finding. After this is done, the result of their decision will have to be given effect by the Governments of both countries, and upon it a treaty or convention of some nature founded which will provide a remedy.

It would be over optimistic therefore, to look for anything in the shape of immediate, effective or permanent remedy. What may, however, be hoped is that the commissioners will recommend some modus operandi whereby lumber manufacturers on the lower parts of the river will be able to have at least a fair proportion of their logs reach them early in the season of 1910. If this is done, there will be no great amount of disturbance next year, and if extensive construction is found necessary for a permanent remedy, it can be gone on with, with assurance that from the present onward, the situation will gradually improve.

Pioneer Lumbermen of the Ottawa

Gillies Brothers of Braeside—Their Modern and Extensive Saw Mill Plant—A Business extending over 60 Years and Three Generations

The illustrations published herewith of the mills and properties of Gillies Brothers, Limited, at Braeside, Ont., will be of interest to lumbermen throughout Canada, on account of the progressive business carried on by the firm. The business was established in 1873 as a partnership, under the style of Gillies Bros., by James, William, John and David

therefore good claim to being among the old pioneer firms in the Ottawa Valley. They have inherited a splendid name among the lumbering fraternity and have maintained its merits undiminished to the present day.

The properties bought in 1873 consisted of the mill at Braeside, capacity 13,000,000 feet yearly, and some 250 miles of timber limits on the

Gillies Brothers, Limited—The Office.

Gillies, four sons of the late John Gillies, of Gillies Mills (now Herons Mills) and Carleton Place, Ont., one of the well known lumbermen of a generation ago. He was senior partner, 1867 to 1873, in the firm of Gillies & McLaren, large manufacturers of sawn lumber at Carleton Place, and for a score of years previously was actively and extensively engaged in the square timber trade on the Clyde, Mississippi and Trent rivers. The move to Braeside was made in order to locate on the Ottawa river, with a view to further expansion. At Braeside, all the tributaries of

Gillies Brothers, Limited—The Cedar Mill.

Coulange river, formerly owned and operated by the Rev. Henry Usborne. Since that date the business has been gradually extended both in mill capacity and timber holdings, until the present time. The sawmills now have a capacity of 35,000,000 feet in the season running ten hours only, and contain two bands, twin cylinder, and a 54-inch double cant gang, with every equipment for careful manufacture and economical handling.

The cedar mill is equipped with one circular log saw and six shingle

Gillies Brothers, Limited—The Inn.

the Ottawa river above the Chats Falls were available as sources of supply.

The partnership formed in 1873 was changed, in 1893, into a limited company, under the name of Gillies Bros., Limited, with the four original partners and the oldest sons of two of them as directors. Later other sons were admitted, and the present board of directors consists of John Gillies, president; David Gillies, vice-president; John S. Gillies, secretary-treasurer; William Gillies, J. A. Gillies, D. A. Gillies, and A. B. Gillies, all (excepting Mr. Wm. Gillies) actively engaged in the various branches of the business. The original partners continued together without a break for thirty-six years, until the death, in January, 1909, of James Gillies, the senior member of the partnership and the president of the succeeding company from its incorporation until his death. This shows a continued active connection with the timber trade extending over sixty years, and three generations. Gillies Brothers, Limited, have

Gillies Brothers, Limited—The Boarding House.

machines. It has a capacity of 150,000 ties and 25,000,000 shingles in the season, working day time only.

The timber limits now held by the company consist of some 1,400 square miles in Ontario and Quebec, all on tributaries of the Ottawa, from which logs can be floated to their mills at Braeside. The company are assured of a supply for years to come.

The head office of the company is at the mills, Braeside, Ont., on the main transcontinental line of the Canadian Pacific Railway, thus assuring a good supply of cars and good service. They also have a distributing yard and planing mill at Morristown, N.Y., on the United States border, with Mr. D. D. Earing in charge, while Mr. Guy E. Robinson, of 1123 Broadway, New York City, is their able representative in that important market.

It is seldom that one finds so many members of a family taking actively to the one line of business. In the present case, the personal in-

terest taken by each member of the company in its welfare is responsible for the splendid record which has been made. They have all, in fact, identified themselves closely with the business. They have, however, been able to devote their energies to other fields as well. Mr. James Gillies, eldest son of the late John Gillies, resided in Carleton Place and was in charge of the mills and sales of Gillies & McLaren for some years. He was also manager of Gillies, Son & Company, woollen manufacturers, and John Gillies & Company, machinists and founders, both at Carleton Place. In addition, he was interested in other less extensive concerns. He was also actively interested in school and church work.

Mr. John Gillies has been in charge of the Braeside mills since their purchase, and has resided at Braeside.

The logging department has been in charge of Mr. David Gillies, who, perhaps, is best known as the former able representative of the

The Lumber Trade in Great Britain

Statistics of Import and Consumption for the Half Year — Improvement Noted

The completion of the first half of the year 1909 has been coincident with an appreciable improvement in the condition of the lumber markets generally in Canada, and in the United Kingdom the opinions of those who are accustomed to study trade conditions seems to be that there is some reason to expect improvement. In the month of June, however, in the face of increased imports at some of the leading ports, the demand is reported to have been disappointingly small, so that the deliveries were

Gillies Brothers, Limited—Part of Log Pond.

County of Pontiac in the Quebec Legislature, a position which he filled with honor for some seventeen years, retiring at the last election.

Of the younger members of the company, Mr. J. S. Gillies, secretary-treasurer, is the eldest son of Mr. James Gillies, the first president. He resides at Braeside. Mr. J. A. Gillies, eldest son of John Gillies, is now in charge of the logging end of the business, with headquarters at Gillies Depot, near Cobalt.

Lastly, and by way of explanation of the success which has been obtained by this family of lumbermen, it should be stated that they are

Gillies Brothers, Limited—The Saw Mill.

all Presbyterians of Scotch descent. Scotch Presbyterians have had an exceedingly honorable connection with lumbering in the Ottawa valley, and none have been more deservedly successful than the late John Gillies and his descendants.

According to a despatch from Portland, Ore., most of the logging camps of the Lower Columbia and tributaries, as well as those of Grays Harbor, have shut down for the vacation season, and they are expected to remain idle until the tariff question is settled, one way or the other.

The camps have not recognized any vacation season for the past five years, because there was a strong demand for logs, but the disturbed condition of the market at this time has prompted the owners of the camps to guard against an oversupply, at a time when the price is inclined to decline.

There are about 1,250,000 feet of logs now in the water of the lower river. Logs are now quoted at \$7 for red fir and \$9 for yellow, and this, it is claimed, will not permit of profit in the logging business at the rate of wages and the cost of provisions,

Gillies Brothers, Limited—Office, Village and Lumber Yard.

light. A favorable factor at Liverpool, however, is the fact that stocks, with few exceptions, are not too large and values, therefore, are fairly well maintained. Yet in the face of the weak demand, it is still desirable that imports should be moderate. The stocks of New Brunswick and Nova Scotia spruce and pine at Liverpool and Manchester combined totalled 16,410 standards on June 30th last, against 19,060 at the same time in 1908, and 26,960 in 1907. Comparatively speaking, therefore, these are light. The imports of these classes of woods were pretty evenly divided between Manchester and Liverpool. The demand at present is

Gillies Brothers, Limited—Lumber Yard on Main Line of C. P. R.

reported to be poor, although, with stocks still low prices are remaining fairly steady. The imports for the month of June were much lighter than those in the previous years, being as follows: 1909, 11,600 standards; 1908, 15,670 standards; 1907, 15,020 standards. The consumption, although about stationary, shows in reality a slight increase for the month of June, being as follows: 1909, 6,790 standards, 1908, 6,310 standards, and 1907, 6,690 standards.

Birch logs at Manchester and Liverpool at the end of June, 1909, showed an increase in stock. The figures are as follows: 1909, 1,700 loads; 1908, 1,080 loads. In 1907 the stock at the end of June was 2,120 loads. The consumption of birch logs during the month of June was comparatively heavy, amounting to 1,250 loads, against 860 in June, 1908, and 340 in June, 1907. The imports increased similarly, amounting to 1,380 loads in June, 1909, against 780 in June, 1908, and 460 in June, 1907.

Birch planks in stock at the end of 1909 at Manchester and Liverpool amounted to 1,376 standards, against 795 on the same date in 1908, and 1,363 in 1907. The consumption of birch planks at these ports for the month of June, 1909, amounted to 243 standards, against 303 in

June, 1908, and 128 in June, 1907. The imports increased from 133 standards in June, 1908, to 727 in June, 1909, whereas in June, 1907, they were 297 standards. Birch logs arriving in the Mersey were mostly from Quebec, and the demand is reported to have been fairly good. At present the stocks are quite ample. Birch planks have not been in such good demand and the prices are low.

British Columbia and Oregon pine imports at Liverpool, Birkenhead and Garston have been light and the demand has been limited. Stocks at present are heavy but prices are fairly well maintained. During June there was an import of 4,000 cubic feet, against 18,000 cubic feet in June, 1908, and nil in June, 1907. Stocks at the end of June amounted to 394,000 cubic feet, against 326,000 cubic feet at the same date in 1908 and 405,000 cubic feet in 1907. The consumption for the half year amounted to 104,000 cubic feet in 1909, against 125,000 cubic feet in 1908, and 120,000 cubic feet in 1907.

Quebec square and waney pine stocks at the above ports amounted to 88,000 cubic feet on June 30th, 1909, against 67,000 on the same date in 1908, and 105,000 in 1907. The consumption of these woods for the half year was quite light, amounting only to 39,000 in 1909, against 76,000 in 1908 and 68,000 in 1907. The imports for the half year were nil and the same in 1908, against 10,000 cubic feet in 1907. Pine imports from St. John and other ports were also nil, as they have been for the same period during the two previous years.

At Glasgow the lumber business during the past quarter dragged on in an uneventful manner, the improvement which was looked for not having materialized. The opening of the St. Lawrence, which usually puts some briskness into business, has so far failed to do so. Parcels which were shipped under contract were taken in delivery by the merchants, but the bulk of the consigned stock found its way to the storage ground. With the exception of Quebec oak and sawn pitch pine, the stocks are extremely moderate. This fact, coupled with the probability of imports being kept within reasonable bounds, largely accounts for the steadiness of prices, in face of the small enquiry. The import of New Brunswick and Nova Scotia spruce at Glasgow since the beginning of 1909 has been moderate and most of the arrivals have gone into consumption from the ship's side. Stocks are now reported to be low and to warrant higher values, but the competition of Baltic goods has kept the prices down. Present quotations are £7 10s. to £8 for 7-inch and 8-inch, and £8 15s. to £10 for 9-inch and wider, St. John stock.

Stocks of birch at Glasgow appear to be light, but there are heavy supplies in the private yards and prices are weak. Recent arrivals have sold at 16 to 20d. for 16-inch average, and 17½-inch recently brought 2s. 2d., but this figure is higher than the present prices.

At London the aggregate stock of deals and battens at the end of June was 2,763,674 pieces, against 3,838,565 at the same date in 1908, and 4,636,809 pieces at the same date in 1907. According to Foy, Morgan & Company's estimate this stock will last at the current rate of consumption 3.28 months. The 1908 stock at the same time was similarly estimated to last 3.39 months, and the 1907 stock 2.67 months. In spite of the comparatively low stocks, therefore, it is to be seen that the demand is dull. The lowness of the stocks in deals and battens is fairly well distributed throughout fir, pine and spruce and pitch pine. Some of the larger dealers are inclined to look for improvement on the strength of recent activity. During the first half of the year the prices of waney pine at London have shown little variation. They promise to remain steady with an upward trend, on account of light supplies. Canadian oak has been in poor demand, though some important enquiries have recently appeared.

The spruce market at London has been restricted during the first half of the year, because of the inability of shippers and merchants to agree. Baltic white woods have been taking the place of spruce. With a disposition on the part of shippers to meet the views of merchants, which is now reported to be more noticeable, it is thought that a larger cargo business at reasonable prices can be expected during the rest of the summer and autumn.

The arrivals of stocks from Canada at London, during June, were as follows:

From St. Lawrence ports:—

Pine deals	112,000 pieces, against 100,000 pieces in 1908
Spruce	95,000 pieces, against 70,000 pieces in 1908
Birch planks	18,000 pieces, against 26,000 pieces in 1908

From New Brunswick, etc.:—

Pine deals	19,000 pieces, against 29,000 pieces in 1908
Spruce	172,000 pieces, against 330,000 pieces in 1908
Birch planks	146,000 pieces, against 93,000 pieces in 1908

The deliveries have been very light, only 28,000 pieces of all kinds and some cheap sales are reported. These, however, are only of an exceptional nature.

Frank A. Arend & Company, wholesale lumber dealers, have favored the "Canada Lumberman" with a handsome leather covered pocket diary and memorandum book, which contains also an interesting assortment of useful information. Frank A. Arend & Company make a specialty of hard pine.

Letters to the Editor

Mr. J. Innes Tells of Cooperage Production.

Mr. J. Innes, of the Sutherland, Innes Company, Limited, Chatham, Ont., in an interesting communication to the "Canada Lumberman," gives some instructive details regarding the production of cooperage stock in Ontario. In the course of his letter, Mr. Innes says:

"I went into the matter of the production of cooperage stock in this country for the past two or three years, and it is approximately about the same.

"There are quite a number of small mills throughout the country who manufacture considerable stock and sell it locally, from whom I am unable to obtain reliable statistics, but from personal knowledge I should say that the amount of stock manufactured by these mills during the past few years would not vary or have any appreciable value in the market.

"There are not over one-third as many staves manufactured in Ontario at the present time as there were in 1899. Nearly all of the large mills in Kent, Essex and Lambton have gone out of existence for lack of raw material; whereas there used to be a stove mill at almost every station between Windsor and St. Thomas on the Michigan Central, now there are only three mills. Along the Leamington branch of the M.C.R., where there used to be four mills, there are none. On the Pere Marquette there are only two mills, as against 12 or 14, and on the Grand Trunk, while there are a number of small mills, the output from these mills is not one-third of what it was years ago.

"The greatest difference in quantity of stock produced is on the Courtright branch of the M.C.R. The largest mills in Canada, namely Alvinston, the Jog, Oil City, Courtright, Homesdale, Inwood and Alvinston, are all out of existence. Where formerly there used to be in the neighborhood of 200,000,000 exported from Canada to the United States each year and 12,000,000 to 15,000,000 to Europe, there are not over 5,000,000 exported from Canada yearly, this trade being filled by staves manufactured in the United States, both for local and export consumption.

"In heading it is a little different. There is about three-quarters as much heading manufactured in Canada now as there was ten years ago. There was never any heading manufactured for export to the United States, although, of course, some has been shipped in times of scarcity. While about 100,000 sets used to be exported to Europe from Canada, about one-half of this is still exported from here and the balance from the United States.

"There are about 60 per cent. of hoops made now in comparison to ten years ago, the use of patent elm hoops in Canada being to some extent supplanted by the wire hoop.

"Regarding the consumption in Canada, this has not varied more than 25 per cent.

"While in older districts there is not as much cooperage stock as formerly, new markets have opened and there is probably 75 per cent. as much stock used now as ten years ago."

Continual Waste of Timber Resources.

A correspondent from Little Current, in a letter to the "Canada Lumberman," writes as follows: "One of our chief needs at the present time is a national revival of forestry. The waste still continues, and the nation still permits lumber speculators to use the public domain to raise crop after crop on the one purchase of the then saleable timber thereon, without allowing anything for the increasing price of lumber, or giving the permanent settler any share of the crop sown by the Creator for the present and future benefit of the land and future population. Till the lumberman clears up his own rubbish, nothing will ever succeed in protecting our forests effectively, and united action by the Government (the original owner), the licensee (the owner of the first cut only), and the farmer (or permanent proprietor), will alone increase the forest wealth.

"No man will clean the waste of the cut over for nothing, and eventually the fire loss will far more than offset the stumpage gain. Thousands of our best young men are going to the United States or the prairies who would be a great benefit to New Ontario had they got a fair opportunity to remain in the timbered portion of Canada."

"'What God hath joined together let not man put asunder' is as true of the land as of the race who inhabit it. Let the Government resume all the licensed lands, keeping poor soil in trees, and selling or leasing fertile soil to men of reputation, who would care for the trees under competent foresters, who would control cutting when ripe only—not giving away thrifty saplings on the Doyle rule, for a mere fraction of their value, with modern milling machinery. Give the pioneers of to-day similar inducements to those of 1830-65 and you will fill New Ontario with the cream of our young men and save the benefits derived from preserving tree life."

Manufacturers' Convention at Seattle

Important Meeting of N.L.M.A.—Delegates Discuss Important Topics—Edward Hines Elected President—Many Canadians in Attendance. Hoo-Hoo House the Scene of the Gathering

The seventh annual convention of the National Lumber Manufacturers' Association of the United States was held at the Hoo-Hoo house in the Alaska-Yukon-Pacific Exposition at Seattle, Wash., on Monday, Tuesday and Wednesday, July 12th, 13th and 14th. Beyond any question the convention was the most important meeting of lumbermen which has ever been held west of the Rocky Mountains.

The President's Address.

The opening session took place on Monday, and the president, Mr. R. A. Long, of Kansas City, Mo., occupied the chair. The visiting lumbermen were welcomed to the city of Seattle by Mayor John F. Miller and I. A. Nadeau, director-general of the Alaska-Yukon-Pacific Exposition. Major E. G. Griggs, president of the Pacific Coast Lumber Manufacturers' Association, also extended an official welcome to the visitors. President R. A. Long, on behalf of the National Lumber Manufacturers' Association, replied to the addresses of welcome in a brief speech, after which he delivered his annual address. In the course of his address he made special reference to the matter of the duty upon lumber entering the United States from Canada. In regard to the settlement of such questions as these, the National Association, he said, had a most important work to carry out. "Strange to say," he remarked, "the question of the duty upon lumber came at a time when the whole country seemed to be alive with the necessity of conserving our forests. Strange, I say, because the two purposes work exactly to the opposite of each other, for a close study of the whole matter will reveal to any unprejudiced mind that a reduction of the tariff means an increase in the supply of low grade lumber from Canada, thus overstocking an already overstocked market, necessarily reducing the prices to such an extent as to compel the leaving of a large amount of our low grade logs in the woods to rot or be burned, thereby reducing our timber supply instead of conserving it. I want to repeat in most emphatic way what I have before publicly stated, viz., low prices and the conservation of any commodity cannot travel the same road, and if tariff means low prices it means the opposite of conservation. The more closely this subject is studied the clearer this statement becomes, and so it is necessary to educate the people, our law makers and all, to the end that this great industry shall not be paralyzed, the wages of laborers reduced, the products of the farm sold on a lower level, the life of our forests be prolonged."

He then outlined the work which the Association had done in opposition to a lower tariff on lumber. He devoted some attention also to the matter of conservation and suggested that it might be a wise move to form a national clearing house for lumber manufacturers in connection with the Association, similar to the clearing house already established by the Yellow Pine Manufacturers' Association.

The secretary, Mr. Geo. K. Smith, stated that the affiliated associations now represented a production of 12,000,000,000 feet, or one-third of the total for the United States. Speaking of trade conditions, he said:

"Generally speaking, the supply has exceeded the demand during the last eighteen months and neither the volume of business nor the prices received for the product have been satisfactory. The figures for lumber produced in 1908 as compared with 1907 show a decrease in production of 17 per cent., and undoubtedly that percentage, of decrease, or a larger one, will be shown for 1909."

A paper entitled "The Lumber Cut of the United States in 1908," which had been prepared by Mr. R. S. Kellogg, of the Forest Conservation, was then read. The gist of this paper has already been published in the preliminary statement upon the production of lumber in 1908, which appeared in the "Canada Lumberman" of July the first.

Proper Handling of Cutover Lands.

This was followed by an address by Mr. J. A. Freeman, of St. Louis, Mo., on the subject, "How Should the Various Types of Cutover Land be Handled to Secure the Best Reproduction, Either Natural or Artificial?" Mr. Freeman dealt both in a sarcastic and serious manner with the problems of conservation, laying particular stress upon the importance of governmental co-operation. It was idle, he said, for individual lumbermen to attempt the task of conserving the forest resources. The multitude of their cares and worries stood squarely across the way. Nothing short of most thorough and most intelligent organization could hope to get results. The only thing lumbermen could do was to lend their sympathetic interest, and to co-operate with those upon whom the State laid the burdens of finding ways and means of conserving their present condition and their future need.

Those who were interested in the odd lengths conference assembled in the Hoo-Hoo house in the afternoon. Secretary Victor H. Beckman, of the Pacific Coast Lumber Manufacturers' Association, called the con-

vention to order. John A. Bruce, of Strader, La., was elected chairman. A number of members delivered addresses expressive of their views upon the odd lengths question. After a discussion which lasted for some time a motion by Mr. Paul E. Page was unanimously adopted, to the effect that it was the sense of the conference, to be reported to the National Association meeting, that odd lengths in moulding, flooring, drop and bevel siding, finish and partition be considered standard, and that the approval and aid of the National Association be enlisted in this.

On Tuesday a brief morning session was held, during which Mr. J. E. Rhodes, who represented the Association at Washington before the sub-committee on car service and demurrage of the National Association of Railway Commissioners, presented a report of the action taken. The shippers had been unanimous in demanding a rule to provide for averaging of hours of overtime granted to a shipper for loading, or a receiver for unloading cars. The so-called "debit and credit" system was recommended. He believed that the sub-committee would incorporate such a provision in its report to the National Association of Railway Commissioners. Mr. Rhodes' reports was received and adopted by the Association.

The convention then adjourned in order to attend the funeral of the late Representative Francis W. Cushman, of the 2nd Congressional district of Washington, whose services on behalf of lumbermen were regarded by all to have been the greatest help which they had received in the struggles at Washington.

On Wednesday morning the report of the Committee on Resolutions was accepted. Among the resolutions was one recommending for serious consideration by the Board of Governors at an early date, the code of ethics of the American Lumbermen's Trade Congress recently adopted at Chicago. A resolution was also included to the effect that the Association recommend the adoption of all practical and effective means of conserving the forests and utilizing their products to the fullest extent without waste. Another important resolution included in the report was that the Association should declare its opinion that all lumbermen should request that supplies furnished from stores and lumbering camps be delivered in wooden packages.

Election of New Officers.

The election of officers for the ensuing year resulted as follows: President, Edward Hines, Chicago; 1st Vice-President, E. G. Griggs, Tacoma, Wash.; 2nd Vice-President, W. B. Stillwell, Savannah, Ga.; Treasurer, J. A. Freeman, St. Louis, Mo.

The newly elected president, Mr. Edward Hines, delivered an inaugural address, in the course of which, referring to the duty upon lumber, he said that unless they were united they could accomplish nothing in a national way. The National Association should take up those larger questions in which the manufacturers of all sections had a common interest. He pointed out how the Association had disabused the public mind of the belief in a lumber trust which had been so successfully nourished by Senator Kittredge. The experience of the Association's Committee at Washington had convinced it that a national association, properly organized with suitable machinery, could demand recognition in all legislation on matters pertaining to the lumber industry, and could obtain full justice for each of its members.

At the conclusion of Mr. Hines' address, the convention elected the following Board of Governors for the ensuing year:

E. C. Fosburgh (re-elected), Norfolk, Va.; J. B. White (re-elected), Kansas City, Mo.; William Irvine, Chippewa Falls, Wis.; R. M. Carrier, Sardis, Miss.; J. H. Bloedel (re-elected), Bellingham, Wash.; William Deary (re-elected), Potlatch, Ida.; A. L. Osborn, Oshkosh, Wis.; W. C. Miles (re-elected), Globe, Wash.; F. H. Pardoe (re-elected), Wausau, Wis.; D. H. Downman (re-elected), New Orleans, La.; H. M. Graham (re-elected), Brinson, Ga.; R. A. Long (ex-officio), Kansas City, Mo.

An invitation was then extended to the Association to hold its 1910 meeting at New Orleans. This invitation was unanimously accepted. This concluded the business session of the convention, and the rest of the time was devoted to the reading of a number of important papers, among which was an extremely interesting one entitled "How Much Does it Cost to Grow Timber?" by R. S. Kellogg and E. A. Ziegler, of the Forest Service, Washington, D.C. The conclusions reached in this paper were as follows.

"Present stumpage prices of white pine are at a point where growing this timber is profitable for a 40 to 70-year investment at from 4 to 6 per cent. with land and stocking at \$10 an acre. Where land naturally stocked with a dense stand of young white pine can be bought for less than \$10, the profit is correspondingly greater.

"Stumpage of other species must rise to the cost of production in all cases except where cheaper, fast growing species will furnish satisfactory substitutes. At the present rate of stumpage increase, loblolly pine, red oak, yellow poplar and Douglas fir will shortly bring reproduction prices. Preliminary measurements indicate that cottonwood, red gum, southern white ash, redwood and probably a number of other species have a rate of growth that will include them in the list of species which will soon reach stumpage prices covering the cost of growing. There is little room to doubt that with all these species the stumpage will reach a reproduction price long before the timber can be grown. In other words, there is every reason to assume that the timber land owner who begins now to reforest will realize a profit when the timber is ready to cut.

"Present virgin timber is nearly always of greater age than can be grown with profit hereafter. This old timber usually has a larger percentage of the highest grades than "second growth" or young timber. Hence, in value virgin stumpage must be compared, not with the cost of the younger aged timber quoted above, but with the older classes. Under present methods of taxation, and to cover a 4 per cent. investment, virgin timber values should rise at least to the cost of growing saw timber from 12 to 24 inches in diameter, averaging 16 inches.

"The cost of growing timber with the long investments required becomes unreasonable when high rates of interest are demanded. If private capital is unwilling to engage in the growing of timber for an income of 4 or 5 per cent. compound interest, then the sooner timber lands come into possession of the States or the National Government the better, for they can undertake it at an even lower rate than 4 per cent."

A paper entitled "The Relation of Taxation to Forest Conservation," by Prof. F. R. Fairchild, of the Yale University School of Forestry, was listened to with great interest by all present.

"The Future of the Forests" was the title of an address by Mr. E. T. Allen, District Forester, United States Forest Service, Portland, Ore.

Among other addresses delivered were the following: "Lumber Insurance," by Geo. H. Emerson, Hoquiam, Wash.; "Lumber Inspection," by E. G. Ames, Port Gamble, Wash.; "Uniformity of Grades," by C. C. Bronson, Seattle, Wash.; "Forest Fire Protection," by Frank H. Lamb, Hoquiam, Wash., and "Trade Ethics," by W. A. Whitman, Tacoma, Wash.

The meeting of the cargo branch of the Association was held on Wednesday afternoon, at which Chairman E. G. Griggs presided.

During the course of the convention a great number of entertainment features were provided by the committee in charge.

Among the Canadians who were noticed in attendance at the convention were the following: R. H. H. Alexander, Vancouver, B.C., British Columbia Lumber & Shingle Manufacturers' Association; J. A. Dewar, Nelson, B.C., Porto Rico Lumber Company; J. S. Emerson, Port Moody, B. C.; P. D. Roe, Port Moody, B.C.; E. C. Mahoney, Port Moody, B.C. Emerson Lumber Company; W. A. Anstie, Nelson, B.C., secretary Mountain Lumber Manufacturers' Association; W. H. Higgins, Vancouver, B.C., Pacific Coast Lumber Company; John Hendrie, B. C. Mills Timber & Trading Company, Vancouver, B.C.; J. O. Cameron, Cameron Lumber Company, Victoria, B.C.; Richard Alexander, B. C. Mills Lumber & Trading Company, Vancouver, B.C.; T. F. Patterson, Terminal Lumber & Shingle Company, Vancouver, B.C.; H. J. Mackin, Fraser River Lumber Company, Fraser Mills, B.C.; J. E. Tusker, Vancouver Lumber Company, Limited, Vancouver, B.C.; J. H. McLean, Port Moody Shingle Company, Port Moody, B.C.; T. Ludgate, Arrowhead, B.C.

The Advantages of Using Thin Knives.

To use thin steel knives or not to—is a proposition that comes to the mind of every progressive lumberman at this time. The facilities offered by their use are no longer an experiment and those who are willing to retreat from the march of progression will show their adherence to old foggy ideas with all the defective methods accompanying.

To tear loose sometimes requires real courage, but usually such show their progressive spirit and compensate by the early advantages to their complete satisfaction. Naturally, the reader may hesitate owing to the varied methods of using the thin knife.

Some advocate the use of a square head with thin knife and spring steel back, whereas others purchase complete heads, of which there are a variety to select from, especially suited to the use of the thin steel knife.

It matters little which of the methods now in vogue may be adopted, because they all show especially advanced ideas for the planing and surfacing of lumber. There is one point, however, of particular interest and that is relative to the kind of thin steel knives one adopts.

Many makes of these knives may be found with varying degrees of merit, but the Bedee Knives, manufactured by Samuel J. Shimer & Sons, Milton, Pennsylvania, to whose product this journal has frequently referred, are especially useful and make particular claim to superiority.

United States capital invested in Canadian lumbering interests is estimated to be not less than \$40,000,000.

Use of Safety Devices Increasing

Greater Attention now being Given in Ontario Mills to the Protection of Employees

Factory Inspector Thomas Keilty writes as follows to the Ontario Government in his annual report: "I am pleased to report that the progress of industry and the equipment for the safety and protection of employees in factories has made very favorable progress during the past year. I might refer in particular to the installment of guards on shapers, buzz planers, etc. During the fall of 1907 there was on exhibition at the Toronto Fair, a rip-saw shaper and buzz planer equipped with practical guards to protect the operator from being injured by these machines. Since that time I have seen more guards applied to these machines than during my previous years of inspection; which demonstrates that, generally, manufacturers are desirous to protect their machines when they are convinced that a practical means is available.

"Other conditions have maintained their reputation for progress, although there was throughout the year a marked tendency to curtail the manufacture of some lines of goods. This applied in a general way to the lumber industry, which was not worked up to the standard of other years, and which had the effect of providing a more skilled class of workmen through the reduction of former staffs who were employed when the mills were operated to their full capacity, and thus averting the cause for accidents and the employment of boys under the required age, which is another evidence of the great regulator of supply and demand.

"Another industry which is closely allied, if not a part of the lumber industry, is the manufacture of pulp, and which follows into the manufacture of paper. Within the last few years this combined industry has assumed large proportions in this province. In the past the manufacture of pulp was an almost distinct occupation, but of late many of our large lumber mills have turned their attention to the manufacture of pulp; or, at least, where this is not done, to the supply of pulp material. The latest to enter this line on a large scale in my district, is J. R. Booth, of Ottawa, who manufactures lumber, pulp and paper at his extensive works in the above-named city, employing an aggregate of twelve hundred men. And in justice to their enterprise, I am satisfied that his new pulp and paper mills are among the best, if not the best, on the continent, from a constructive, sanitary and safety standpoint. Of course, this plant being recently constructed, would have the advantage of past experience in remedying defects in constructive safety and sanitary appliances. But experience has convinced me that unless humanitarian interests and modern enterprise are combined, we cannot hope for the best results. My only purpose in referring to this particular plant is to give credit where credit is due, and with the hope that what I have to say will be of benefit to other similar industries in remedying defects that exist in or about their premises.

"A plant for the manufacture of pulp, or pulp and paper, requires a large amount of heavy machinery and shafting. This machinery in some parts is operated at a high rate of speed, and necessarily requires a good substantial foundation, not only in behalf of the life and duration of the machine, but also its safety and effectiveness. It also requires that its dangerous parts be securely protected against accident as far as practicable. Then the shafting, counter-shafting and couplings require to be put up in a substantial and well balanced manner, and lastly, securely fenced and protected in all parts exposed to traffic. This latter direction also applies to pulleys, belting and drives. All stairs and openings should be securely railed, also planks or gangways provided for oiling, or as a means of access to any part of the machinery or shafting, should have strong and suitable handrails for the protection of persons whose duties require them to have access to such parts.

"In putting up handrails or protection of any kind, do so with the object of making that part perfectly safe. I have in mind instances where railing was put up at the direction of the inspector, and I afterwards discovered the danger had increased because of the temporary nature of the protection. If a man were to turn his cattle into a field where there was an open well, he would not simply throw a rail across that well to protect his cattle, but he would put a substantial fence around the well to protect them. The same applies more forcibly to the railing or fencing of dangerous machinery, where human life is at stake. Strange to say, however, some persons consider their legal obligations only, and these in a literal sense.

"Another phase of this industry is its sanitary effects. It has been proven beyond doubt that certain processes in the manufacture of sulphide pulp are very injurious to workmen; the evil effects from these processes have been practically removed in the system installed in J. R. Booth's mills. The injurious effects consisted in the presence of sulphuric acid gas in such quantities as to contaminate the air in a very harmful degree, and thereby cause the workmen to inhale almost continuously during working hours this poisoned air. The origin of these gases is found to be principally in the washing tanks. After the pulp chips are cooked in the digester tanks and impregnated with sulphuric

gas, they are usually emptied into a large tank to be cooled, washed, and conveyed to another process, and some of these tanks are open, permitting the gases to circulate throughout the entire premises. This system provides for the removal of the wood pulp by conveyors in a semi-dry state after the water which cools and washes has run off at the bottom of the tank. The process installed by Mr. Booth provides a closed tank, in which the cooked pulp is emptied, after which the washing and cooling water is turned on and the whole is reduced to a slush, which, in turn, is pumped up to a further process, allowing the sulphuric gas to escape through a ventilator, twelve by sixteen feet, and extending fifty feet above the roof. The system also provides a spray of pure water constantly pouring on the air which passes through this ventilator, to wash the gas from the air as it passes out over the city. Thus it will be seen that there is very little chance for the escape of injurious gases. Of course, poorly constructed or leaky pipes conveying the gas from the furnace to the digester, will readily give rise to trouble from this source, but this is a condition which can easily be remedied. In justice to those who have plants of the old type, it would hardly be fair to ask them to reconstruct their system along the lines described, as it would involve a large expenditure; but in view of the serious consequences to persons employed in these places, I would feel justified in requiring a fan installed so as to supply fresh air to workmen whenever engaged in these cooling tanks."

Personal Mention.

Mr. R. H. Thompson, city engineer of Seattle, visited Vancouver recently with a party of good roads delegates.

Mr. Fred J. Davenport, selling agent for Canada of the Louisiana Red Cypress Company, of New Orleans, spent the month of July visiting the company's various mills.

Mr. A. D. McRae, president and general manager of the Fraser River Lumber Company, Fraser Mills, B.C., is visiting Toronto and other eastern points. Mr. McRae reports an excellent outlook for the lumber business in the West.

Mr. R. H. Alexander, manager of the Hastings mill, one of the best known and most experienced lumbermen on the Pacific coast, has been chosen by the Vancouver Board of Trade to represent them at the meeting of Chambers of Commerce of the Empire, to be held in Sydney, Australia, in September next.

Mr. James Maclaren, of Ottawa, the principal shareholder in the North Pacific Lumber Company, whose mill at Barnet, near Vancouver, was recently destroyed by fire, will spend the summer superintending the erection of a new and large mill, which will have a daily capacity of 130,000 feet. The plant will cost \$400,000.

Vancouver has gained another good citizen in the person of Mr. Wm. Robertson, assistant general manager of the Rat Portage Lumber Company, Limited, who went there from Kenora, Ont., with his family. Mr. Robertson has been with the company since its organization in 1893, having been secretary and manager of the eastern mills for that long period.

Mr. J. P. Johnson, of Campbell & Carman, Toronto, recently returned from a visit to the Pacific coast. Mr. Johnson took advantage of his trip to visit the Alaska-Yukon-Pacific Exposition, where one of the main centres of attraction is the Forestry Building. This building was erected by the State of Washington. It is 312 feet long, 128 feet wide and 90 feet high. In its construction there were consumed 2,016,000 feet of logs and lumber and 300,000 cedar shingles.

Mr. Fred S. Morse, of the Fred S. Morse Lumber Company, Springfield, Mass., and of the Nepisiguit Lumber Company, Bathurst, N.B., is making an extensive trip in New Brunswick, to look into the lumber situation there. Mr. Morse looks for little or no change in the American lumber market before next spring. This opinion, he has formed on the reports sent in by his firm's travellers in various parts of Canada and the United States. The sluggishness of the lumber market, he says, is due to a variety of causes. By some the tariff is named as the cause of lack of buoyancy.

Expanding Business Demands Larger Premises.

The B. Greening Wire Company, Hamilton, have instructed their architect, Mr. W. A. Edwards, of Hamilton, to prepare plans for a new wire rope factory. It will be a one-storey concrete and brick structure, 124 feet by 112 feet, with saw-tooth roof construction. The flooring will be solid concrete so as to withstand the weights of heavy machinery and large reels of cable. It will be an up-to-date factory in every respect. Orders have been placed for additional rope machinery of the very latest design.

It is expected the new mill will be completed and machinery installed by November first. The present rope mill will be used as an extension of the wire working branch of the business and will provide much needed room for the rapidly growing demand for their wire guards, garden fencing and bordering, factory lockers, etc.

British Columbia News

Secretary McGaffey, of the Vancouver Island Development League, wishes to hear from the different mill owners and loggers on the island concerning the development and progress of work at the camps and mills. He has undertaken to have all information of interest printed.

The consensus of opinion among prairie lumber dealers and mill men appears to be that following a good harvest—of which no doubt is entertained—there will be a period of tremendous activity in building, and stocks on hand in the yards will be rapidly depleted.

W. A. Anstie, secretary of the Mountain Lumbermen's Association, Nelson, B.C., states that up-country sawmill men are unanimous in reporting that the demand for lumber from the three prairie provinces is stronger now than at any previous period during the past two years. Virtually every mill is in operation and despite the output, lumber stocks, which last January amounted to about two hundred million feet, have been reduced to about one hundred and fifty million feet. With a good crop harvested the improvement of conditions in regard to the lumber industry next fall will be a certainty. Prices are not showing any tendency to increase.

If everyone in the West is as busy as the Walsh Sash & Door Company, of New Westminster, B.C., there must be prosperous times ahead. Mr. W. E. Walsh, jr., reports that the company are employing 75 men in the ten-hour shift, by which they can turn out 300 doors a day. They need more doors, however, and have had to start running a night shift so as to turn out 500 doors per day. The company's equipment is all new and up-to-date. The motive power used is electricity. They have recently added a new power door clamp to the equipment, which has a capacity of 700 doors per day. The Walsh Sash & Door Company were formerly owners of the Bay City Sash & Door Company, of Bellingham, Wash., and while there shipped most of their output to Canada. Among the articles manufactured are doors, windows, turnings, and bandsawing in straight or mixed car lots. The company manufacture in both cedar and fir. They have been in operation at New Westminster now for about ten months.

Mr. H. J. Mackin, sales manager for the Fraser River Lumber Company, Limited, reports as follows: "With regard to conditions and our experience for the past few months, will state the market has improved wonderfully, prices are firmer and the present prospects for a bumper crop make the future look very hopeful. Our new mill is running along finely. The lumber we have shipped out has been very favorably commented on, and British Columbia's largest mill is certainly making good on its promise of superior products, perfectly milled and quick deliveries. We carry in stock 15,000,000 feet of lumber that is made 'right,' and with this stock, can ship promptly.

"Last month we shipped over 175 cars to the prairies, besides water shipments as follows: Coast-wise, 1,500,000 feet; S.S. 'Invermay,' for Sydney and Newcastle, 1,500,000 feet; ship 'Schurbek,' Valparaiso, Chili, 2,500,000 feet; S.S. 'Clan Macinnes,' for Sydney, 1,500,000 feet; ship 'Puritan,' Melbourne, 2,250,000 feet; a total disposition of stocks of about 12,500,000 feet. We believe this is a record for the coast."

Sessions of the Pacific Coast Logging Congress were held in the Hoo-Hoo house on the Alaska-Yukon-Pacific Exposition grounds on July 19, 20, 21, with many prominent loggers and others identified with the industry in attendance from all parts of the Pacific northwest. The programme provided for the organization of a permanent logging congress, the election of officers, addresses by noted speakers and an excursion to Mukilteo, to inspect the mills there.

After the address of welcome by the president, E. P. Blake, of Seattle, a number of addresses were delivered, among which were the following: "The Scope and Purpose of the Pacific Coast Logging Congress," Frank H. Lamb, Hoquiam, Wash.; "Electricity as a Factor in Logging," George J. Brown, Portland, Ore.; "Cost of Fuel for Donkey Engines," C. W. Thompson, Cascade Locks, Ore.; "Timber Cruising," Frank H. Conant, Weyerhaeuser Timber Company; "Fire Hazard and its Prevention," D. P. Simmons, jr., Washington Forest Fire Association, and Prof. F. F. Miller, University of Washington; "Methods of Redwood Logging," W. W. Peed, Eureka, Cal.; "Sugar Pine Logging," Wallace Everett, manager Wood & Iron, San Francisco; "Logging on Grades too Steep for Locomotives," A. W. McLafferty, Tenino, Wash., and A. W. Clark, O. K. Logging Company, Portland, Ore.

The conference at Washington, between the Senate and the House of Representatives conferees and President Taft, upon the tariff schedules has been concluded and the duty on lumber has been placed at \$1.25. This is a compromise between the Senate figure and that of the House of Representatives, which were \$1.50 and \$1 respectively. It is believed that the tariff uncertainty will now be settled and that the conference report will be agreed upon and signed by the President this week.

CAMP DEPARTMENT

Logging in British Columbia—Methods in Vogue on the Coast

The logging industry on the British Columbia coast and in the interior is one affording employment to thousands of men in the woods and other thousands of men are kept at work in the mills throughout the province. The amount of money annually placed in circulation by the lumbering interests is tremendous, and with a good demand for the products of the forests there is prosperity for a very large proportion of the population of British Columbia. Lumbering lends an impetus to many other industries and to commerce of many kinds; it furnishes large orders to the machinery and hardware men, throws thousands of dollars in the way of the vendors of oils, leather belting, steel, steel cable and wire rope, tools of all descriptions which find a place in camp or mill, keeps scores of tugboats running all the year around, is a factor in the operation of trans-Pacific steamships, transcontinental trains, and the supplying of cargoes to scores of sailing vessels destined for all parts of the world with the output of the mills. In a thousand different ways the lumbering industry is a factor in the development of the wealth of the province, and were the camps and mills of coast and interior forced to close down there would be an enormous hole driven through the prosperity of the people of the great West.

Logging Methods Change

For forty years and more it was possible on the coast for the logger to take a donkey engine or two on a scow, strike up the coast in tow of a tug and land his machinery and supplies on the beach directly in front of the timber which he had been employed to cut or which he intended to cut on his own account. Those were the days of the cheapest kind of logging, because with the aid of the donkey engines it was possible to pull out of the woods all the merchantable timber these waterfront limits contained. With the waterfront denuded of its forest wealth the logger was forced further back, but for many years he managed to remain in business with his donkey engines and with great timber chutes which he built down the steep hillsides to the water, and by means of which he was enabled to log off table lands and little shoulders high up in the hills where excellent timber grew.

But with the gradual disappearance of the timber which was easily accessible from the water with such primitive means of securing it as log chutes and donkey engines, there have arrived great steam logging railways which pierce the hills through the valleys which were logged over in the early days. These railways are tapping great reserves of timber far back from tide water which could not be reached by any other means. The logs are yarded still by steam donkeys and loaded on flat cars for transportation to salt water, where they are discharged into the sea to be made up into booms for towing to the mills of Vancouver and New Westminster.

Well Built Logging Railways

These railways are not by any means built in any slipshod fashion; they are constructed as well as any transcontinental line, the ballasting and the entire roadbed being as perfect as possible because of the immense weight the cars have to bear in transporting the fallen monarchs of the forest from their cradle to the water that is the next thing to their grave. Logs forty and sixty feet in length, with a diameter of from six to ten feet, are not things to be lightly tossed around, and the roadbed that supports a string of flat cars bearing such burdens has to be something as stable as modern engineering science can make it. The grades of these up-to-date logging railways are also made as low as possible as the expense of transportation is as closely figured on as in the engineering department of the great transcontinental railways.

At the present time there is under construction a logging railway from tidewater at Scow Bay, just north of Jervis Inlet, to the Gordon Pasha lakes, a distance of about five miles for the first section of the line, which is all that will be built for some time. This road is being hurried to completion and it will be in operation within a few months. As the road taps the large water stretches of the Gordon Pasha lakes, which drain a vast area of what is declared to be some of the best timbered country on the coast of British Columbia, it will be possible to log an immense stretch of country by means of it.

Unique Grade Locomotive

There is at the very door of Vancouver a logging railway which is unique in that it runs down a mountain side where the grade in places is declared to be 18 per cent. This road is situated on the west side of the Capilano river. So steep is the grade of this road that a Shea geared locomotive which was secured to furnish motive power, was unable to hold the rails, and within a very few days of its introduction on the work it raced down the mountain side and jumping the tracks, scattered its remnants through the forest. When a geared locomotive could not operate on the grades the builders of the line were forced to fall back on what

is probably the only logging engine of the kind on this coast. It is a wheeled platform adjusted to the grade and bearing a donkey engine and upright boiler. At the upper end of the line cables are securely anchored and these are passed around huge sheaves on the locomotive, which lowers itself and its load down the mountain and then winds itself up again.

More and more every year are the loggers being forced back from the coast line to secure their timber, and as a consequence the number of these steam logging roads will rapidly increase where there are extensive limits to be logged. There is now under construction in the Squamish valley a standard gauge railway which, while built to develop the rich agricultural resources of the Pemberton valley and the Lillooet, will be used in transporting billions of feet of fir from the Squamish and tributary valleys to tidewater.

The day of the big logger, the man with hundreds of thousands of dollars behind him, is here, and with his coming the small man is gradually passing away, being forced out by conditions over which he has no control, but the hand logger and the man with the donkey engine have played a wonderful part in the development of the lumbering industry on this coast.—Vancouver Daily Province.

Protection of Timber Lands from Fire

Of all the possessors of valuable property, the owners of timber lands take less precautions to insure against loss by fire of any known class of people, says C. L. Crawford, in "The Paper Mill."

In the nature of things I shall expect that the first exclamation to be used will be that they are unable to insure such property. But there is more than one kind of insurance. One of the oldest and largest holdings in Maine and New Brunswick—a property which was sold a few years ago at a price close to \$1,500,000—was for twenty years and over kept almost entirely free from fire at an annual expense not exceeding \$1,000.

This property would have been considered an extra hazardous risk by any insurance company, on account of the miles of railroad and number of trains crossing it. A patrol system of following each train during the dangerous season was the means of extinguishing many incipient fires, and thereby preventing great loss. The most damage was done in June of 1903. The patrol of these people discovered a fire on a 10,000-acre tract belonging to a neighboring lumber company. The owners promised to see that it was put out, but neglected to do so, trusting that it would go out of its own accord or be drowned by rains. In that season the most extensive damage all over the country was done in one day of high wind. This wind swept the fire over this 10,000-acre tract, a 6,000-acre tract of still another owner, and got on to the land which was being patrolled, about 600 acres. And this totally unnecessary fire caused them more loss than they suffered at any other time in the twenty odd years. This fire destroyed pulpwood which, if cut, would have netted the owners over \$500,000.

There has hardly been a forest fire in a good many years which could not have been prevented by a comparatively small expenditure in an efficient patrol system.

While these fires seldom do any serious damage to timber suitable for lumber, they destroy the smaller growth and put back the reforestation of the area for a generation, and in many cases for a longer time.

The people are not going to stand for these fires, with their accompanying smoke, much longer, and when the reaction comes the timberland owners are going to be very heavy losers. Already the mutterings are heard, and if the agitation now started reaches much further, several States will put laws on the statute books compelling every lumberman to destroy the old tops and refuse left after cutting. If they stop to consider what this will cost them, their hearts, which, with a good many of them, are located close to their pocketbooks, will give one mighty throb, and all this will be caused because nearly all of them considered that money spent in this manner was money thrown away, if it happened that they were lucky enough to be one of the fortunate ones that fire did not visit.

In the majority of cases, the owner who has fire on his timber land deserves no one's sympathy. A very much smaller expenditure of money than any insurance company would demand in premiums, invested in an efficient patrol system during particularly dry seasons, would keep them almost entirely free from fire. In a majority of years this patrol would be necessary only for a short time in the spring and fall, although there is an occasional year, like 1908, when it would be necessary for a longer time.

A sale by public tender of certain timber and tie berths in the Districts of Algoma, Sudbury, Thunder Bay, Kenora and Rainy River, will be held by the Ontario Department of Lands, Forests and Mines on Wednesday, September 15. Descriptions, plans and conditions of sale may be had from the Minister of Lands, Forests and Mines.

Andrew MacCormack Estate and Other Interests

THE UNDERSIGNED ARE INSTRUCTED to sell by Public Auction en bloc, at the Russell House, Ottawa, on September 30, 1909, at 2.30 p.m., the following Timber Limits situate in Block A Upper Ottawa, Province of Quebec, viz:

Berth 676 Licence No. 580 of 1908-09, south half Lot 16, Range 4, Block A, 25 square miles; Berth 677, Licence No. 581 of 1908-09, south half Lot 16, Range 3, Block A, $21\frac{1}{4}$ square miles; Berth 681, Licence No. 582 of 1908-09, Grand Lac Victoria, River Ottawa, 19 square miles; Berth 678, Licence No. 583 of 1908-09, south half of north half Lot 16, Range 4, Block A, $9\frac{1}{2}$ square miles; Berth 679, Licence No. 584 of 1908-09, north half Lot 16, Range 3, Block A, $15\frac{1}{2}$ square miles; Berth 680, Licence No. 585 of 1908-09, north half Lot 15, Range 3, Block A, 18 square miles; Berth 681, Licence No. 586 of 1908-09, south half Lot 17, Range 5, Block A, 25 square miles; Berth 682, Licence No. 587 of 1908-09, north half Lot 16, Range 5, Block A, 25 square miles; Berth 686, Licence No. 588 of 1908-09, north half Lot 17, Range 4, Block A, 25 square miles. Total $183\frac{1}{4}$ square miles.

These limits are all surveyed and are easy of access by a good roadway from Ville Marie to their location. They comprise some of the best pine and pulp wood areas in the Province.

The Trustee reserves the right if the Reserve Bid is not reached, to offer the berths separately.

Terms—10 per cent. of the purchase money to be paid down at the time of sale, and the balance in equal instalments at one (1), three (3) and six (6) months thereafter with interest at the rate of 5 per cent. per annum.

For further particulars and conditions of sale apply to the Royal Trust Company (Ottawa Branch), and to Code & Burritt, Solicitors, Carleton Chambers, Ottawa.

Dated this 31st day of March, 1909.

THE ROYAL TRUST CO., Ottawa,
Trustees of Sale.

The Tumbo Tree.

On the west coast of Africa grows a curious plant classed by botanists as a tree, but no lumberman of this country would suppose it to be a "tree." It is called "Tumbo," and is a curious instance of adaptation to conditions and environments. It grows in an absolute desert where no rains fall and no moisture is present except the fogs from the sea coast. The Journal of the New York Botanic Garden describes the full grown "Tumbo" as a "trunk" about two feet long, shaped much like an inverted cone. Almost all the trunk is below the

surface of the ground, the visible part being only a few inches above ground. The remarkable feature of the trunk or stem is that often it is three and a half feet in diameter, or about 14 feet in circumference, and becomes more or less two-lobed in maturity. The trunk looks like a great mass of burned crust of a loaf of bread. The underground portion becomes greatly elongated, and its termination becomes the tap root of the plant. This goes down several feet into the desert soil in its efforts to get the few drops of water that the arid nature of the country permit. It never has more than two leaves after the seed leaves drop off, and very curious leaves they are. Starting from opposite sides from a groove on the depressed "trunk" they stand straight out on both sides of the plant and are often six feet long and two feet wide, and usually split into ribbons that undulate on the ground, strikingly suggestive of the tentacles of an octopus. With its great ugly body and its tentacle-like leaves, it is been discovered during the past century. Its flowers are borne in scarlet cones that come from the crown of the stem. It can be cultivated only by approximating the conditions that exist in its native African habitat. It is a desert plant par excellence. So far no use has been found for it.

A Sewer for Good Money.

Imagine a customer going into a haberdasher's and ordering a \$2 shirt, throw down 75 cents as payment. Yet this is what occurs every day of the present time. Manufacturers no longer fix their prices. They are told what their output is worth to the buyer and that ends it. Now let the manufacturers close down all the mills of this coast for sixty days. Then the supply will come to a closer level with the demand and prices will, once more, assume a normal tone. When the loggers and the manufacturers settle upon the price which is "right," then, and then only, will come the hour when the coastwise lumber business will become something better than a mere sewer into which to throw good money after bad.—Wood and Iron.

Loss of Timber Wealth.

The annual loss to the State of Maine through failure to utilize properly its wealth of timber is estimated by Fred. A. Gilbert, of the Great Northern Paper Company, at over \$10,000,000 a year on five of the most common kinds—spruce, pine, fir, hemlock, and cedar. In addition to this the State is slowly losing its principal assets, the standing growth of the timber itself. This latter loss is not due to the cutting and marketing of the timber (in fact, but little more than one-half of what the State is capable of producing is ever marketed), but to the great waste and decay and the losses by fire and wind.

Review of Current Trade Conditions

Ontario

There has been little of any importance to report in the lumber situation in Ontario during the past fortnight. If anything, there is a slightly more active demand for white pine from the United States. This is especially the case for the mill run goods. American buyers have been travelling about Ontario in large numbers. It is reported that one of the most extensive manufacturing companies have sold the greater part of their cut to United States buyers. The retail trade in Ontario is listless and irresponsible to any effort on the part of manufacturers. Travellers report that the yards generally are fairly well supplied, and that in many sections farmers, on account of doubt as to the crop outcome, are buying no lumber at all. Hemlock, if anything, shows a tendency on the part of those who have stocks to refrain from cutting prices. Prices in other lines are unchanged, and the amount of business going on is very slight.

The demand for lath and shingles at Ottawa has declined quite extensively, though manufacturers are not disposed to pay much attention to it. They argue that the dealers who are cutting prices are making a mistake and that the demand will revive again early in the fall at the latest, when dealers with short stocks will have to pay the manufacturers' prices, and will regret having parted with their summer stocks at low figures. The American demand for shingles is light, on account of the probable increase in the duty from 30 to 50 cents. Buyers of pine and spruce in the United States are also holding back until the tariff uncertainty is removed. There is still a downward tendency in the lower grades of thin lumber and deals. For pine mill culls \$17 is a high price, and most of the sales are at \$16 per thousand. Hemlock and tamarac are also reported weak.

Eastern Canada

The improved demand for "English" spruce deals has only held its own and has not continued, as was at first expected would be the case. The quotations at present for specifications containing 50 per cent. sevens and eights, 40 per cent. nines, and 10 per cent. elevens and wides, are from \$14 to \$14.50 per thousand feet f.o.b. steamer St. John. The shipments of "English" spruce during the last fortnight have exceeded the output by hundreds of thousands of feet, so that the stocks have been materially reduced. At St. John, the holdings at present amount to five and a half to six millions of superficial feet. Spruce lath have been dull for the past month but prices are quite steady at \$2.90 for non-dutiable and \$2.65 for dutiable f.o.b. steamer St. John. Cedar shingles have been weaker and improvement is not expected before September. Prices are \$2.75 for dutiable extras and \$2.25 for dutiable clears.

The turning point in the market for spruce at Boston is believed to have been reached during the past fortnight. Buyers are showing much more interest and are anticipating their wants to some extent, since prices grew firmer. A few dealers are still accepting \$23 for frames 9-inch and under. Several mills, however, are firm at \$23.50, and business has been done at this price. Some manufacturers state that they will hold for \$24. This figure, however, has been obtained only in rare cases as yet. Random has not advanced, but dealers are a trifle more firm. There is not an active call for wide random. The average price is \$23, though bids of \$22 are frequently made. For 2x3 and 2x4, \$21 is the selling price. Boards are only in moderate demand though firmer.

At New York the spruce market is strong according to reports from wholesalers. Prices, however, are a little unsteady. Shingles are weak at Boston and prices easy. Canadian shipments for prompt delivery are being made at low prices so as to anticipate the tariff changes. Cedar "extras" are quiet at \$3.65 to \$3.75, with few bids at the top price.

Lath are about steady with sales of choice 1½-inch at \$3.75. The general price is \$3.50. For 1⅝-inch, prices range from \$3.75 to \$3.85.

Western Canada

Fir logs are very cheap in British Columbia at present and there is an excellent demand for lumber. This is the first time in many years that such a combination has occurred, and as a result the lumber market is considered satisfactory by manufacturers. As an instance of the low fir log prices, a boom, above merchantable in the general run, was recently sold, delivered at the mill with all charges paid, for \$6.50 per thousand. The base price of lumber is \$11. The going price for logs is better than \$6.50, but a sale at this figure illustrates the weakness of the market. Shingles are in good demand on the prairies. It is so good, in fact, that manufacturers are not concerning themselves much about the United States market, where the demand has fallen off greatly.

Great Britain

The f.o.b. market continues to show strength and importers believe that a fair autumn trade is assured. The better demand has helped to bring this about, though it is believed that inland consumption has improved, largely on account of stocks having been allowed to run down. In spite of a good deal of encouragement English buyers are still inclined to be extremely cautious, and speculation is remarkable by its absence. At the London docks, business is still remarkably brisk in over-side deliveries, but spot deliveries continue to fall away in all descriptions. Very little inconvenience has been caused by the extreme lightness of dock stocks this year. Prices continue quite steady for useful sizes, deals being very firm, and the demand for floorings and matchings well maintained. At Churchill & Sims' recent auction sale unsorted Quebec spruce, 3x8, went at £8 10s., and 7-inch at £8 5s. 16-foot 1st Montreal pine made £31 15s., and the regulars £32 5s., 10 and 11-foot going at £28 15s. Prime unsorted Oregon made 1s. 7d. and 1s. 6d.

At Liverpool there is a better tone than was expected a short time ago. The spruce deal market particularly is quite buoyant, and there is an upward tendency for cargoes to arrive. Ordinary shipments from St. John and Miramichi have advanced at least 5s. per standard during the last few weeks. Cargoes recently landed are going direct into consumption. Canadian pine deals are unchanged at Liverpool and very little of the arrivals go into stock. Prices are expected to remain firm for the rest of the season. At Manchester spruce deals are in good demand and are expected to remain so for another month or two at least.

United States.

The improvement recently shown in business conditions has made itself felt quite noticeably in the lumber trade in the United States. At Chicago, northern pine is moving in larger quantities and prices of all the upper grades remain firm. At Minneapolis the outlook is encouraging for later business, and manufacturers are inclined to hold their factory grades of northern pine firmer. Railroads also are beginning to order lumber for grain doors, etc., which is having a good effect upon low grade stocks. At New York, upper grade stocks are in better demand, but the market still is comparatively quiet with prices steady. Floor timbers at Chicago are unsettled. Although there have been increased enquiries of late, no orders have resulted.

It is expected that repair work on the railroads will shortly require a quantity of floor timber. Stocks of No. 2 flooring are low with a good demand. Finish is strong. B. siding is in good demand and scarce. Spruce also is in good demand and steady. There is a shortage of the

higher grades of western pine at Chicago. Prices are strong and a large volume of business has been done for No. 2 shop and better.

Red cedar shingles at Chicago have gone off a few cents. White cedar shingles are dull, as a result of red cedar competition. At Minneapolis shingles are in good demand, but there is a shortage of transit cars from the coast. Prices are firm and show no advance.

Market Correspondence

Ottawa Valley News—Lath and Shingles Lower.

Ottawa, July 24.—Lumber manufacturers do not attach much importance to the recent reduction in lath and shingles in the Ottawa district and expect advances to come later on in the season. There was even a greater decline in lath quotations a year ago, when white pine lath fell in a short time from \$4.25 to \$3.25 per thousand. The high figure was never restored, but this was not strange in view of the remarkable prices that had been ruling for lath for about a year. But the depression was short lived. When the dullness came in 1908 holders of stock preferred to keep what they had rather than sacrifice them, and there was consequently an early strengthening of the market. White pine and spruce lath were carried over in considerable quantity and the abundance of this stock on the market at present accounts for the weakening of the prices. The big producers are again holding to old prices and declare that middlemen and all who cut the rates are making a mistake. It is pointed out that this has been a low season for the production of all sorts of lumber as a result of a late start and hindrance to manufacture by high water, and that the demand for lath will come later on when the supply will not be able to meet it. To some extent the same holds good with respect to shingles.

Some surprise is expressed at the scarcity of enquiries for shingles on the American side, although the biggest producer reports himself sold out. The prospective increase of the duty from 30 to 50 cents has not stimulated the local demand very much and makers wonder what improvement can be derived by the trade when the tariff for this line is settled. In pine and spruce lumber sold to Americans the situation is very clear. The buyers are holding off till the Customs law is declared. An example of the interruption to trade is found with Hurdman & Elmitt, who have several boat loads waiting to be despatched and which the buyers do not want to accept until the tariff conditions are made more favorable. The Ottawa shippers in all cases will be only indirectly affected, as the sales are made f.o.b. In some cases, however, they are not waiting till the buyer is ready and have ordered them to ship away the stock at once.

Any downward tendency in thin lumber and deal prices is still in the lower grades. Pine mill culls rarely sell at more than \$17 per thousand and a great quantity goes at \$16. Hemlock is also weak and there is a good deal of tamarac on hand. The latter is bought chiefly in lots sawn to order, and commands from \$14 to \$15 per thousand. It does not often replace white pine, being sought mainly for bridges, stable flooring, silos and such like.

Compared with a year ago the water power is admirable and promises to make up considerably for the loss sustained from high water in the spring. One of the heaviest rain falls for the month of July, amounting to an inch and a half, occurred on the 22nd and 23rd of the month, which, with the previous rains, will put the Ottawa river in excellent condition for supplying the needs of the mills. J. R. Booth is running at full blast, and the prospects for all the mill owners are that they will be able to operate more extensively and at less cost than in the latter part of the summer of 1908. A great quantity of last winter's cut of logs will not be needed at the mills this summer, but the logs are far enough ahead to be available for any demand.

Lumbermen's agents report a scarcity of the sort of labor required for shanty work, and there is a probability of the wages going up four or five dollars a month. Last year \$26 was high, and the bulk of the men were engaged at an average of \$22. The wages for farm hands now are \$26 a month, and there is a small supply compared with the demand. For months the labor element has been drained off to the Northwest farms and to railway construction camps. The reduction of the gangs of river drivers also left men depending on other means of livelihood, and they went away to quarters where they will not be available when the hiring for the woods begins. So many too, were disappointed at the pay of last year that they are not so anxious to follow lumbering another season. Supplies for the shanties are also high priced. Pork is \$12 per cwt.; hay \$16 per ton, and a poor crop; flour \$6 per barrel. Lumbermen have not yet decided on plans as to the extent of the operations in the forest, but it is expected more logs than last year will be taken out. The first gangs will be sent away to the woods next month to cut roads and prepare the camps.

M. J. O'Brien, the wealthy lumber, mining and railway man of Renfrew, is the head of the St. Lawrence Pulp & Paper Company, which

has just begun to produce pulp board at the Chaudiere at a prospective capacity of 35 tons per day. The mill will not use much spruce, depending for its chief source of supply on spruce screenings from mills that have thrown this refuse in the river.

The big incinerator at J. R. Booth's mill, erected some years ago for the burning of the sawdust from the mill, was examined by the city authorities to ascertain if it would be suitable for burning the city garbage. Mr. Booth informed the city that garbage might damage the huge burner and that there might also be trouble in getting the consumer to eat up the green stuff as easily as sawdust. The city afterward agreed to pay \$2,500 a year to have the refuse drawn away.

From New Brunswick's Capital—"English" Deals Firmer.

St. John, N.B., July 26.—The fortnight has been productive of many events of moment to those who are interested in the lumber industry of the province. Among other features was the getting out of the drives on the St. John river, the last logs having reached the Fredericton boom on the 17th. The drives this year have been very expeditious and results have been very satisfactory, not more than two millions of feet having been left. The quantity which has run into the sorting works at Fredericton is estimated at 130,000,000 feet. Of this quantity about one-half has been rafted and sent down river.

The sitting of the commission which is taking up the difficulties arising at points where rivers form the boundaries between Canada and Maine, was resumed in this city on Monday, July 19th. Most of the time up to the present writing has been taken up with the evidence of Mr. J. Fraser Gregory, of Murray & Gregory, of this city, and president of the St. John River Log Driving Company. The commission so far is aiming, apparently, to obtain knowledge fully covering the conditions governing the stopping of logs for sorting purposes at Van Buren, Maine, at the sorting works owned by the St. John Lumber Company. This stopping of the logs seems to be the most important issue at stake. Mr. Gregory made some interesting statements while giving his evidence, among others, that the value of the plants in St. John used for the purpose of manufacturing lumber would be in the vicinity of \$1,025,000. The finding of the commission will be a tremendously vital one to local mill-owners and will be awaited with great interest.

It was asserted by one or more of the witnesses at the enquiry that it would be possible to dam some of the upper branches of the St. John river and use the water thus reserved to make a head in the main river when required to drive logs. It would thus be possible to stop the logs for sorting purposes, without jeopardizing the chances of getting out the logs which must go further down river to be sawn. It is estimated that the cost of such an extensive operation would be between \$400,000 and \$500,000. While it is rather early to make any definite statement in regard to the matter, it is regarded as probable that a system of dams will prove the ultimate solution of the problems in connection with the driving of logs on the St. John river.

The sale of "no mark" and "mixed mark" logs rafted at the Fredericton booms and to be rafted during the balance of the season, took place on July 21st. The "no mark" hemlock, pine and cedar were bidden in by Scott Bros., of Fredericton, at \$5, \$10.10 and \$7.25 per thousand feet respectively, and the spruce, which forms the much greater part of the whole, was bought by Messrs. Randolph & Baker, of St. John, at \$13.90 per thousand for deal logs and two-thirds price for battens.

In trade circles the fortnight has been one of important events. The most vital question of the day in lumber trade circles has to do with "English" deals. The situation is being watched very closely, especially as the stimulation mentioned in the last letter proved a change after a long period of quiet. This stimulation, while quite tangible, has not been followed up by the trend of events to the extent which it was hoped would be the case and the situation as regards "English" spruce deals remains, locally, at any rate, much the same as it was previous to the slight manifestation of liveliness of a few weeks ago. The present local value of "English" spruce deals, in a specification containing say 50 per cent, sevens and eights, 40 per cent, nines, and 10 per cent, elevens and wides, would range from \$14 to \$14.50 per thousand feet (two-thirds price fourths and ends) f.o.b. steamer St. John.

Shipments of "English" spruce during the fortnight have exceeded by some hundreds of thousands of feet the output of the local mills, and the aggregate of local stocks has consequently shrunk considerably. The present local holdings of this line of goods would total from five and one-half millions to six millions of superficial feet. A considerable portion of this quantity has been already placed and awaiting the arrival of steamers for despatch.

Freight charters for July and August shipment are quoted at 32s and 6d. per standard to the west coast of Great Britain and the east coast of Ireland.

The market for spruce lath has shown little change for a month past. Local values in this line remain steady and there is apparently little danger of a shrinkage in values. Local stocks would total to a quantity of six and one-half to seven millions, shipments having been, during the present month, frequent and large. The present local value

Woods Planers

There are a thousand and one things to tell you about these planers. Here is one

In the Solid Back Round Cutter-Head—the latest improvement—extra metal behind the knives provides a solid support and takes all the strain. There are no projecting bolts in tension, but a series of set screws in compression which hold the independent pressure blocks in position without distorting the knives. Self-hardening steel can be used with absolute certainty that the knives will not spring.

The head is made in a single piece of fine crucible steel turned to cylindrical form and slotted from end to end. Each knife is set at exactly the same angle as in a square head.

Lumber Matters in the Law Courts

Lien upon Lumber—Payment upon Timber Cutting Contract—Recovery of Logs

Lien for Material Furnished to Contractor.—In the case of *Ludlam-Ainslie Lumber Company v. Fallis*, Judge Clute, in an Ontario Divisional Court, has recently held that it is essential before the lien can arise that the material should be furnished and placed upon the land upon which the lien is claimed. In the case under consideration it was conceded that the last of the material sold to the contractor was never used upon the building or even placed upon the land, and that more than 30 days elapsed between the time any material furnished by the plaintiff was placed upon the land or used in the construction of the building. He was of opinion, therefore, that no lien attached. The question raised was on an appeal as to whether a sub-contractor was entitled to recover for the value of material sold to the contractor, but which was not actually placed in the building or upon the land upon which the building was being erected. The trial judge had upheld the lien and Judge Clute reversed this judgment with costs.

Description of a Timber Limit.—In the Supreme Court action of *Edmond & Norman v. the Vancouver Lumber Company*, an action for \$12,000, for cutting timber on what was alleged to be the plaintiff's limit, Mr. Justice Irving has given judgment holding that the stakes of a timber limit are to be given precedence over the advertised and registered description. He awarded the plaintiffs \$680, and reserved the question of costs.

Payment for Cutting Timber.—The case of *Thomas Casey v. Archibald McNab*, a dispute over a contract to cut timber, has been decided by Judge Gunn, at Russell, Ont., the plaintiff being awarded \$139.37, or \$60 less than he claimed. McNab engaged Thomas to cut timber in a bush near Kenmore agreeing to pay him \$509.37 for the whole job. Before he was finished and when still the hardest part of the work was left to be done, according to the defendant, Thomas threw up the job. He was given \$310 for what he had done, but he claimed that he had fulfilled the contract, and sued for the full amount. Judge Gunn before giving his decision visited the bush near Kenmore to get a clearer idea of the case.

Damages for Flooding Land.—The appeal of the Heaps Timber Company, Vancouver, against the judgment of the County Court judge awarding Albert Bamford \$760 damages in consequence of the flooding of the latter's land at Hills Prairie by the giving way of the company's dam on the Campbell river, has been dismissed. The appeal was on the ground that the damages were excessive.

Recovery of a Boom of Logs.—In the Vancouver County Court recently George Deighton, a logger, obtained an order for reclaim of a boom of logs collected by one Stubbs. The evidence disclosed that the plaintiff had collected the logs on the north coast, but they were cut loose and picked up by Stubbs, who thereupon claimed them as treasure trove. A claim for damages, by Deighton, was disallowed by the judge.

Therese Schmidt, of New York, and John Shilton, of Toronto, recently issued a writ against William Miller, William D. Dickson, and Miller & Dickson, of the district of Rainy River, and the Eastern Construction Company, of Fort William, Thunder Bay District. The plaintiffs want damages for the alleged cutting and removal of timber, and an injunction.

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

825. Agency abroad.—A South Wales firm wishes to secure the representation of some Canadian lumber exporters.

836. Paper, white news.—A South African newspaper and printing company asks for quotations for white news, 27 inches by 42 inches, 40 pounds per ream, also same size, 38 pounds per ream. Prices must be c.i.f. East London. 300 reams in one lot, or 600 reams in two shipments two or three months apart.

837. Newspaper.—A South African firm of printers and publishers asks for samples and quotations of newspapers.

852. Box-wood.—A South African firm of fruit growers and exporters asks for quotations for box-wood, boxes 24 inches by 6 inches in wired shocks, as per specification, and trays 18 inches by 12 inches by 2 1/4 inches as per specification, packed 100 in crate.

853. Butter boxes.—A South African creamery asks for quotations for butter boxes, wood to be odorless and free from knots; inside measurements to be: length, 15 inches; breadth, 10 1/2 inches; depth, 11 1/2 inches. Also for boxes suitable for storing purposes of the cube pattern, to be 3/4-inch sides, tops and bottoms and ends, each in one piece and 12-inch cube inside measurements.

854. Butter boxes.—A South African creamery asks for quotations

for butter boxes; an assurance must be given that the wood is absolutely free from taint.

863. Doors and windows.—A South African firm of general merchants asks for quotations for doors and windows, etc.

906. Box wood.—A South African firm of manufacturers of jams, etc., asks for quotations of box wood.

907. Box wood.—A South African firm of manufacturers asks for quotations of box wood.

908. Box wood.—A South African Government Agricultural Department asks for quotations for box wood, as per specifications, which can be had by applying to the Department of Trade and Commerce at Ottawa.

925. Flooring blocks.—A London firm which handles large quantities of prime maple flooring blocks, cut to dimensions, invites samples and quotations from Canadian manufacturers who are in a position to make large and regular shipments.

950. Box wood.—A South African canning company asks for quotations from exporters of box wood.

951. Box wood.—A South African fruit packer asks for quotations for box wood in shocks as per specifications, which can be had by applying to the Department of Trade and Commerce at Ottawa.

953. Agents.—A Scottish firm manufacturing cranes, hoists, overhead runways, wire ropeways, conveying and elevating plants, pulley blocks, lifting jacks, winches, harrows and trucks; chains, ropes, etc. (logging supplies a specialty), is desirous of appointing representatives in Canada.

959. Logs and boards.—A London firm of timber merchants wish to get into communication with Canadian shippers of rock elm logs, and soft elm and basswood boards.

How to Figure Lumber Selling Costs.

Every business man does, or should, figure his selling cost at a certain percentage, whether his output is handled by paid salesmen or on a commission basis. Naturally, the producer wishes to hold the expense of distribution down to the minimum, and with this idea in view some manufacturers contend that sales made on a commission basis are the cheaper. Perhaps they are, per thousand feet. Perhaps a man who sells lumber for \$5 a car will move more stock for the money paid him than will a high-class salaried salesman, but if so, it does not follow that the manufacturer who employs the \$5 man is selling his stock the more cheaply. In figuring cost on disposal of output there is a right and a wrong way, just as there is in anything else. It is not necessary to talk about the wrong way. The right way is to figure cost of selling as a certain percentage of the profit on the transaction. If there is to be no profit, why make the sale?

Salesmen, like the members of any other class of business men, differ greatly in ability, but the best salesman in the world must have an incentive or he will not use his ability to the utmost. The man who sells lumber for a fixed price per car has only one incentive and that is to sell as many cars as possible. Why should he hold off for a higher price than the rock bottom figures allowed him and risk losing a sale that means money to him when he gets no more for his work should he succeed in inducing the buyer to pay the higher price? In selling lumber at \$5 a car the man must sell a good many cars a month to make a living. His methods of doing business undoubtedly hurt the lumber market, but it is the system and not he which is to blame.

The salesman, on the other hand, is required to make a showing not only in the amount of stock sold but on the prices he receives for it and his ability is judged more by the latter than the former. Indeed, among the brotherhood of salesmen, the man who gets the price is known as a salesman and the man who takes what he can get, as a peddler.

It costs just as much for stumpage, manufacture and freight on the stock that is sold at prices that represent the bottom of the market as it does for that which is billed out at \$2 above such rock bottom figures. If the manufacturer makes \$2 a thousand on the first lot and \$4 on the second, his percentage of profit on the second lot has been increased 100 per cent., and should be so figured, and the methods by which it was obtained credited to that extent.

Perhaps the greatest improvement that could be made in lumber selling conditions surrounding the commission trade would be increasing the amount of commission allowed, either on a flat car rate or per thousand feet, to an amount which would allow the reputable commission man to do justice to the interests of his milling connections and at the same time make a living profit.—The "Lumber World."

Below will be found a list of patents recently issued by the Canadian Patent Office, 1909, relating to inventions of interest to lumbermen, and furnished by Fetherstonhaugh & Company, Ottawa, Russel S. Smart, resident:

119,108—Howard Parker, Nashua, N.H.; cylinder moulds for paper making machinery; Sherbrooke Machinery Company, Limited, Sherbrooke, Que.

119,181—W. R. Chynoweth, Painesdale, Mich.; combined measuring instruments.

119,272—J. Morin, Seattle Wash.; gauges for cross-cut saws.

119,291—C. A. Knowles, Friend, Ore.; saw-swages.

Lumber and Sawmill Insurance

By using the facilities of this office the COST of insurance on your LUMBER and MILL property will be MATERIALLY REDUCED without impairing the quality of your present indemnity. A SUBSTANTIAL SAVING is possible because our experience as SPECIALISTS has taught us to direct the property owner's efforts for PHYSICAL BETTERMENT of his property into the channels which will result in RATE REDUCTIONS. We have also eliminated many forms of expense, thereby SAVING to our policy holders unnecessary drains on our premium income.

If you are interested **Write Us**, and you will find that we are interested in you.

Highest Efficiency is what you look for in your plant and what you get when you install Western Electric Generators

HIGHEST Efficiency day-in and day-out—under heavy loads or light ones.

That's what the Western Electric Generators will give you.

Thirty years of constant working to improve is back of every machine.

\$230,000,000 worth of apparatus put into service in the past five years—that is the Western Electric Company's record—figures that must prove to you, better than anything else we could say, that Western Electric Generators give the highest satisfaction.

Those parts in which heat is developed are so generously and so well ventilated that the heating is kept at a minimum.

Perfect regulation is obtained by so proportioning the parts as to reduce to the lowest possible value the quantities which tend most strongly to prevent good regulation.

You who own a plant should know more about Western Electric Apparatus. Our Bulletin No. 510 shows you all the details and we will gladly send you a copy. Write for it to-day.

EDGINGS

Ontario

Machinery for Captain Kendall's tie mill at Kenora, Ont., is being installed. A shingle and lumber mill is to be erected by Captain Mellon at Howe Sound, Ont., with a daily capacity of 20,000 feet of dressed lumber and 100,000 shingles.

A bush fire in McCarthy Township, Ont., along the Sturgeon river, which continued for nearly two weeks, caused considerable damage to the limits of the Cache Bay Lumber Company, the Beck Manufacturing Company, and the Victoria Harbor Lumber Company, the latter firm losing camp buildings as well.

All the mills along the Ottawa river are supplied with enough water power to keep machinery going regularly. The only trouble is that before long the river will shrink as a consequence of the enormous waste during the spring flood. On this account there is uneasiness at the delay in the construction of the conservation dam at Lake Temiskaming on the upper Ottawa, at headwater.

Many of the large lumbermen will store a quantity of logs in the Ottawa river to allow the pulpwood logs of the E. B. Eddy Company to get to the manufacturing plant. J. R. Booth, W. C. Edwards Company, the Hawkesbury Lumber Company and Shepard & Morse are joining in this move to help the pulp mill, which otherwise would be unable to get enough raw material to keep the grinders in operation.

The Royal Trust Company will hold a public auction sale on Sept. 30th at 2.30 p.m. at the Russell House, Ottawa, of timber limits in Block A, Upper Ottawa, Province of Quebec. The limits include: Parcel 1, north half of lot No. 8, range 4, block A, Upper Ottawa, Que., 25 square miles; and parcel 2, south half of the same lot, 25 square miles. These are known as the MacCormack & Moore Timber Limits.

The Chaudiere dam, a private enterprise, built by the power interests of Ottawa and Hull, comprising chiefly the E. B. Eddy Company and J. R. Booth, lumber and pulp manufacturers, valued at \$250,000, may escape municipal taxation on account of the value of the improvement to the water service of the two cities. The Hull City Council has made a valuation of the portion on their side of the river at \$100,000, and ratepayers will be asked to exempt the structure from taxation for at least fifteen years.

The Niagara Veneer Company, of Parry Sound, Ont., which until a few months ago was known as Parry Sound Furniture Staples, Limited, report business increasing in an encouraging manner. They have recently installed a Goldie & McCulloch heading machine to make headings, and are also putting in an addition to their plant for the purpose of installing a roll veneer dryer. The Niagara Veneer Company do any extensive business in the manufacturing of furniture veneers, drawer bottoms, basket veneers, etc.

J. R. Booth has taken out a building permit for the construction of a power house at the Chaudiere. The power will be used chiefly for his sulphite and box board factories, which are in the same block as the lumber mill. The building is on the site of his first sawmill, erected about a half century ago. The lumber mill was destroyed in a fire in 1900 and the land remained idle until the present time. Electricity will be generated on the place and transmitted at low cost to the various points of consumption. The motive power for grinding pulp and sawing lumber continues to be the Chaudiere Falls.

Eastern Provinces

A man named Allan Belliveau was seriously injured in a sawmill at St. Paul, Kent county, recently, when a piece of wood flew up, striking him in the stomach. He was taken to the Moncton hospital.

The I. C. R. management has given instructions for immediately transforming 500 flat cars into pulpwood cars at Moncton, N.B. An order has also been issued to build 200 box cars of 60,000 tons capacity at Moncton.

Tenders were received until July 20th, by the Eastern Trust Company, Halifax, for the purchase of 665 acres of timber lands situated on Five Mile lake, Harts County, belonging to the estate of the late Bennett Smith.

It is estimated that the Hearst pulp mill to be erected in Newfoundland will cost from \$10,000,000 to \$15,000,000, as the territory covered by the deal embraces one of the richest and vastest lumber areas in Newfoundland. A further 250,000 acres of lumber have recently been purchased by a syndicate of Syracuse, N.Y., who will also erect pulp mills representing an outlay of \$3,000,000.

Hon. Jules Allard, Minister of Crown Lands and Forests, Province of Quebec, has been conducting an inquiry into the origin of recent forest fires in Arthabaska county. It appears that these fires have been caused by new settlers, who do not take the precautions to extinguish bush fires when they leave. It is understood that the Minister will, at the next session of the Legislature, introduce a bill making it a criminal offense to set fire to the forest.

Wm. Currie, M.P.P., confirms the report of the sale of his company's property to an American syndicate. The interests sold by Wm. Currie & Company, Limited, consist of 163½ square miles of lumber limits located on the different branches of the Charlo river, N.B., a new shingle and railway tie mill, one of the largest in the province, situated at River Charlo, all the logs in the Charlo boom, general lumbering outfit consisting of horses, etc. Walter Miller, formerly bookkeeper for Wm. Currie & Company, Limited, will manage the new business and the affairs will be conducted as in the past, except that the head office of the company will be at River Charlo, instead of Campbellton.

British Columbia

The Crow's Nest Pass Lumber Company, near Wardner, B.C., recently installed a private telephone system around their plant.

Cranbrook, B.C., is to have another sawmill, to be erected north of the Skookum Chuck. Two carloads of machines arrived recently.

The Nicola Valley Lumber Company, of Cranbrook, B.C., has acquired the portable sawmill operated until recently by Wm. Gray, of Lower Nicola.

The Thompson Lumber Company, Limited, Selkirk, Man., has been incorporated with a capital of \$40,000, for the purpose of building and operating saw,

shingle, and planing mills, etc. John James Jackson, Bedford B. Thompson, and Edward J. Tarr, of Winnipeg, are incorporators.

The forestry branch of the Canadian Government finds that the early reports of damage done by fires along the Canadian Northern Railway in Saskatchewan were greatly exaggerated.

The Peterman Manufacturing Company's plant at Tacoma, Wash., consisting of a sawmill, sash, door and interior finishing factory, has been totally destroyed by fire. Loss \$80,000; insurance small.

The work of rebuilding the North Pacific Lumber Company's plant at Barnet, ten miles from Vancouver, which was destroyed by fire in May, is being pushed with all possible speed by the contractor, Mr. C. H. Caite.

The British barque Puritan did not suffer any damage through grounding on a sand bar in the Fraser river, as at first reported. After being inspected at Royal Roads, Victoria, by the surveyor for Lloyds, she left for Melbourne, Australia, on July 6th, with her large cargo of lumber from the Fraser Mills Company, Limited.

Mr. H. L. Jenkins, senior member of the Vancouver Timber & Trading Company, has let the contract for a new steel ten-storey office building to be erected on Pender street, between Granville and Seymour streets. The structure will have a roof garden, and the basement will be fitted up as a fashionable restaurant. The cost will be about \$125,000.

A pile of lumber in the yard at Deep Creek sawmill, belonging to the Okanagan Lumber Company, caught fire recently and in a few minutes the whole yard was enveloped in flames. How the fire originated is a mystery, and as the lumber yard is some distance from the mill the conflagration could not have been started from a spark. The loss will be heavy.

Vancouver City Council has decided to put down 12,000 yards of cedar block pavement on residential streets. The contract for cutting the blocks has been awarded to the Paterson Lumber Company, of Vancouver. Over one million feet of cedar will be required. The blocks will be cut at the plant of the Terminal Lumber & Shingle Company, on False Creek.

A large number of loggers from Oregon, Washington and British Columbia met recently in the Hoo-Hoo house at the Fair in Seattle for the purpose of exchanging views and organizing a Pacific Coast Loggers' Association, which will meet annually to discuss the engineering and technical side of the logging industry rather than its business phase. The congress spent three days in listening to papers on features of logging business.

When the Princess Royal, of the C.P.R. passenger fleet, was leaving Victoria harbor on the night of July 10th, she ran into a boom of logs in tow of a tug, which had put into the harbor to escape the heavy swell outside. The shock opened up several of the cribs and the logs went adrift. The concussion caused by the collision created alarm among some of the passengers on the steamer, but they were quickly reassured by the officers.

With a view to acquiring certain timber limits on Howe Sound, a party of New York financiers left Vancouver recently to visit the claims. The party consisted of Messrs. E. B. Kurtz, president of the American Finance & Security Company, of New York; his wife, Mr. W. R. Welsh, and Mr. E. J. King, of Seattle. They were accompanied by four timber cruisers. The limits contain 28 sections and consist of fir and cedar. The price approximates \$750,000.

If present plans come to a head, the B. F. Graham Lumber Company will in the near future have a sawmill at Victoria, B.C., capable of cutting 100,000 feet daily. Mr. C. M. Shannon, a wealthy mining operator and lumberman, of Los Angeles, Cal., is one of the parties interested. A railroad along the shores of Vancouver Island to Barclay Sound is also projected by the members of the company in order to tap a timber country containing some billions of feet.

Spokane lumbermen are up in arms against the use of pulp paper or fibre boxes and packages. It is estimated that fully 30 per cent. of the lumber heretofore manufactured in the United States has been used by the box factories, and the increasing substitution of pulp is being felt. The Spokane Lumbermen's Club recently passed resolutions deploring the use of pulp for boxes, a copy of which has been sent to every manufacturer in the United States and to all lumber organizations.

The Michigan Lumber Company, owners of extensive limits along the Jordan river, Vancouver Island, intend to construct a large sawmill at the river mouth. Docks will be constructed for the use of vessels loading for the foreign trade, and sailing vessels will be able to arrive and depart without the aid of tugs. The company is now constructing a breakwater which will extend outward 1,000 feet, at a cost of \$50,000. Seven miles of logging railroad have been built into the limits, and two locomotives are engaged hauling logs to the seaboard.

A 7,000-acre tract at Gordon Pasha lake on the mainland coast, owned by Dr. Judson Clark, of Vancouver, has been bought by W. L. Keate, of Vancouver, on behalf of American clients. Although the price has not been made public, it is stated to have been at a record figure for cedar held under license. Seattle capitalists have also purchased a 5,000-acre holding on Britten river, Jervis inlet, from Daniel O'Brien, of the Wilson Logging & Lumber Company, of Vancouver. The price was about \$75,000. The timber consists principally of cedar estimated at approximately 140,000,000 feet.

The construction of the projected Howe Sound, Pemberton Valley & Northern Railway from the head of tidewater on the Squamish river, about thirty miles from Vancouver, to Lillooet, B.C., is eagerly awaited by lumbering firms. The grading of the first section of seven and a half miles is under way, and it is the intention to have trams passing over it before the end of next January. Many millions of feet of some of the finest timber on the coast will be made accessible as a result of the building of this first link of the road, and the shipping of logs to tidewater will be prosecuted with great energy by half-a-dozen firms as soon as traffic opens. As fast as one section of the line is completed another will be put under contract.

An Edmonton, Alta., despatch states that through the sudden rising of the Saskatchewan river recently and the consequent breaking of the booms at the Walters, Edmonton Lumber Company, and the Fraser Company's mills, lumbermen are threatened with a loss of logs fully as great as that of last year, when two million feet were swept down the stream by floods. The river rose eleven feet the first day, and several of the booms gave way, allowing some of the logs to be swept down stream. The lumbermen placed large gangs out on booms to rescue as many logs as possible from the drifts, the gangs working practically all night. The lumbermen curtailed the lumber cut this year to at least one-third, in view of the possibility of another flood. The lumbermen last year put forth strenuous efforts to have the Dominion Government assist in providing protection for the logs and booms on the river, several of the local merchants going to Ottawa, but no action was taken and the conditions this year are precisely as last summer.

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies are guaranteed never to fail when used as directed. You get your money back if they ever do.

They are

Johnson's Horse Liniment No. 1.

A penetrating Alcoholic Liniment.

Put up in one gallon jugs, with full directions, per imperial gal. \$4.50

Johnson's Horse Liniment No. 2.

A combination of the best oils used as liniments, imp. gallon . \$3.00

Johnson's Horse Colic Remedy.

A sure and speedy cure for colic

Imperial gallon \$5.00

Johnson's Veterinary Healing Ointment.

Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada.

Put up in 2 lb tins, each . . . \$2.25

or in ¼ lb tins, per dozen . . \$3.50

Johnson's Condition Powders. (Concentrated).

Put up in bulk, per lb 30c.

These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to \$100.

Send postal for printed matter.

A Popular Cutter Head for a Popular Service

That of matching single tongue and groove flooring, ceiling or plank, with bits interchangeable and readily set up by a standard guage to bring all the tool edges into equal cutting relation around the head centre. This forms first of all a perfect cutting tool wherein every cutter does its share of the work—no more. The cutters being circular and secured to inclined bit seats establishes a system of perfect edge and point clearance, enabling them to cut in any lumber without binding or burning the wood.

Every practical man should understand the use of THE SHIMER CUTTER HEAD. We publish a large catalogue giving full description of the tools as well as many hints to practical men. Send for a copy free. Address

A HOT FIRE

Under your boilers or in your ovens

Increases the efficiency of every machine

- - and every man in your mill - -

IT ADDS TO YOUR OUTPUT

But not to your expenses

The GORDON HOLLOW BLAST GRATE is the ideal forced draft system for burning wet or green slabs, edgings, sawdust and similar refuse.

It causes your boilers to develop from 25 to 50% more steam.

It makes it as easy to control your fire as though you were burning gas.

It lightens the labor of firing.

It outlasts all your other machinery.

SOLD ON APPROVAL, subject to thirty days' test. In case of rejection, WE PAY THE FREIGHT BOTH WAYS.

Write for proposal, giving dimensions of grate surface or surfaces.

The Improved Hot Blast Grate

Style "B" for Mill Furnace

Develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one :-

Berridale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited,
Orillia.

Dear Srs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

We Make All Kinds of Machinery and Tools for the Care of Saws

The sectional view of our swage shows our new spring bracket which permits the swage to tip forward during the operation of swaging. In this bracket we have preserved our compact construction features. It is practically as strong as a solid bracket, is impossible to get out of order, and is easily adjusted to give any amount of spring desired, or to be rigid and allow no spring.

This new feature of Hanchett Swages still further increases the efficiency of a swage which without this improvement has for a number of years been quite generally conceded to have the lead over any other swage manufactured. The spring bracket, in conjunction with the action of Hanchett dies, proves unusually effective in bending the tooth forward so that it may be faced perfectly with little grinding.

Sectional View of Hanchett Band Saw Swage.
(Patented January 5, 1909.)

With this spring bracket with its perfect adjustments, added to the unusually wide range of adjustment of Hanchett swages, the filer can swage his saws to a nicety, and adjust his swage to place the points just where he wants them, and get any amount of hook wanted.

These brackets will fit all the old Hanchett Swages, so that our old customers can avail themselves of this improvement by purchasing from us the new spring bracket.

We absolutely guarantee our swages and all swage parts, and any part furnished by us which fails to be perfect in every respect, both in workmanship and material, will be promptly replaced by us without charge.

Let us send you our New 1909 Catalog No. 18. It is the most comprehensive and up-to-date Filing Room Catalog in existence. It will interest you. : : : :

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

PETERBORO SAW MILLS

Some of Our Shingle Machines

The PERFECTION is a power driven machine, having a capacity of more than thirty thousand perfectly made shingles per day of ten hours.

It can be run to its full capacity with fifteen horse power.

Notice that the carriage is driven from both sides preventing it cramping.

From the view-point of Economy, you cannot buy a better machine than our GRAND TRIUMPH.

Any good operator can cut thirty-thousand shingles in ten hours, and many men have done better than that.

With this machine all of your bolt can be cut into shingles—there is no spalt left at the end.

Ten horse power is sufficient to drive it.

You will be interested in Our Shingle Machinery Catalogue, which we will send anywhere on Request.

Detroit Colonial Columns

Head the Market

In sales, in popularity and unequalled style and finish, Detroit Columns are second to none. An examination at any stage of manufacture, will convince you of the high grade material and excellent workmanship employed in their production. Our famous "Lock Joint" eliminates all possibility of shrinkage or warping and presents that clean, even surface that is so much in demand with architects and builders. We stock in Pine, Birch, Oak, and Chestnut.

A combination of Real Quality and Style is a sure winner in any line. Detroit Columns offer the retail lumber dealer many opportunities of adding to his reputation and to his annual profit. Why not investigate?

TRADE MARK

Louisiana

Long and Short Leaf

Yellow Pine Lumber

Mills in Arkinsaw, Louisiana and Texas

Capacity: 500,000 feet per day

Our Long Leaf Timbers and Joists are as strong as
Oak and are unexcelled in dimension of all kinds on
account of its tensile strength.

Our Short Leaf Flooring Finish and all kinds of
Trim are in a class to themselves on account of its
freedom from knots and the beauty of its grain.

We make a specialty also of Rough Steam Dried and
Smoke Dried Finish and other factory stock of all kinds.

We would appreciate your enquiries and orders.

Cheapen Your Logging

By Using the Lidgerwood Skidding Method

The machine shown in the cut above will pull itself on snow or bare ground wherever a pair of horses could take a drag sled, dray, jumper, skidding or single sled. From any location alongside such road it will reach to the stump a distance of one-quarter mile or less in every direction and will skid all trees in full length or in log lengths. It will place the logs on skids or sleds or in the stream or lake as desired. It will re-yard logs, either taking the logs direct from teams or from the skidway, or where left by itself at a previous setting. It operates throughout the year and is absolutely independent of ground conditions; that is, such as windfalls, underbrush, rocks, cliffs, ravines, or the steepest slopes, operating under such conditions almost as cheaply as over smooth ground.

All swamping, rolling, sliding and expensive cant dog or other hand work is eliminated. It does not fill the logs full of gravel and it does not break or otherwise damage them.

It requires a skidding crew of eight men, uses for fuel one and one-half cords of wood per day, and has a skidding capacity of from 15,000 to 45,000 feet per day, and a re-yarding capacity of from 35,000 to 50,000 feet per day, depending on the timber conditions and management. It will skid the largest tree or a cord of pulpwood, or several small logs at each trip. It will clear 40 to 60 acres at each setting, moves itself quickly from setting to setting, operates independent of weather conditions, does not "eat" when not working, does not have to be "sprung out" and has a working life of fifteen years.

There are several hundred of these machines now operating in the United States and Mexico. Three have just been installed in Canada.

We now have a representative in Canada, who will examine your conditions and tell you what can be done, free of charge of any nature.

Style "B" for Mill Furnace

The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one:—

Berridale, Ont., June 28/00.

The E. Long Manufacturing Co., Limited, Orillia.

Dear Sirs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

SIMONDS

Inserted Point Saws

Made in Montreal

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take \$100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.

An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Securing and Keeping Retail Trade

How to obtain effective publicity is a problem which all retail lumber dealers have to face. A good deal of money is spent in advertising in ways which are without effect. It should be the object of the retailer to see that his advertising is the kind which brings results. Advertising in the press is a splendid manner of acquainting the public with the merits of one's stock, but it must be carried out in an intelligent fashion. The dealer who advertises storm doors in January and leaves the same advertisement in the paper until midsummer will not get much return for his money, but the one who changes his copy to suit the changing seasons and the changing demands of his customers will probably enjoy more than a proportionate share of whatever trade is going.

Advertising consists in bringing to the attention of possible customers the quality, merits and range of one's stock. One method of doing this which is frequently adopted by progressive retail dealers is by attracting attention to the lumber waggons which deliver orders. Handsomely painted lumber waggons, of uniform color, with attractive teams of horses and noticeable signs swinging from them, go far to acquaint the public with the fact that a firm is doing an extensive and prosperous business. Teams of horses of the same color are also a splendid means of attracting notice. There are many other methods which are adopted from time to time, and which in their place are fairly effective. Some of these are calendars, booklets, memorandums, fence board advertising, etc. They all have, however, the one drawback that they are adopted by all classes of merchants and that it is difficult for anyone to carry in mind the name of one firm out of a great number which meet his eye.

After all one is forced to the conclusion that the best advertisements for a retailer are good business methods and courteous treatment of cus-

tomers. Nothing succeeds like success, and the evidence of success will advertise a man or a company more than anything else. One may show this evidence in his advertising or in his public appearance. The exceptionally successful man will show it in both. If by means of bright waggons and good horses he persuades the public that he is particular about his public appearances, they will also come naturally to the conclusion that he is particular about the class of lumber which he keeps. And so the whole thing comes back to the common sense basis that one must pay close attention to all details, public appearances no less than the treatment of customers, and the latter no less than the quality of lumber kept and the discipline of the staff. These are all of importance in attracting customers. To keep them after once they have been attracted is a study in itself, but the key to success in this as in all other fields is continued courtesy and giving them the class of goods which they need. If a farmer is well treated he will tell someone else about it, and other customers will result. And vice versa, if he is not treated according to his liking he is even more certain to let others know about it.

Ontario's Next Timber Limit Sale

The sale by tender of pine, tie and other timber which the Ontario Government has advertised is attracting interest among lumbermen both in Canada and the United States. The berths to be sold are in the Districts of Sudbury, Algoma, Thunder Bay, Kenora and Rainy River. Since advertising the sale the Government has decided to include in it a portion of the Mississauga Forest Reserve in the District of Algoma, which has been burned over. This additional area covers 144 square miles. A large quantity of standing timber therein was so seriously damaged that it must be sold at once to permit cutting during the coming winter. The tenders for the timber will be received until September 15th, in order to give the purchasers an opportunity to make roads, improve rivers and get men and supplies into the berths in time for the winter's lumbering operations.

Tenders are to be for each berth separately, and are to state (1) the amount per thousand feet board measure which the tenderers are prepared to pay for pine and other timber respectively, in addition to the Crown dues of \$2 per thousand feet; (2) the amount per tie in addition to the Crown dues of 5 cents each, for such timber as may be suitable for making railway ties. Licenses are to run for five years in addition to the present season, namely to the 30th April, 1915, after which no further renewals will be given, and the territory will revert to the Crown. The timber is to be manufactured in the Dominion of Canada. An annual ground rent of \$5 per mile is to be paid, and licenses issued for the different areas. Licenses are to issue upon payment of ground rent for the current season, and the amount of the deposit required by the conditions of the sale. No cutting is to be made before the license is issued.

Separate tenders are to be made for each berth, and a marked cheque is to be deposited for one-fourth the amount set opposite the respective berths in the list issued by the Government. Successful tenderers are to pay in the amounts, including the deposits stipulated in the Government's list, within twenty days after being notified of the acceptance of the tenders. The cutting of the timber is to be done in an economical manner and in accordance with the directions of the officer of the Department of Lands, Mines and Forests who is in charge of it. Any timber which in the opinion of the officer should be cut, delivered and paid for, if left in the bush uncut or unhailed, will be charged for at the tendered price and dues, and the amount will be deducted from the deposit.

Sawlogs, timber and ties cut are to be measured and counted by a culler or cullers appointed by the Minister of Lands, Forests and Mines. The wages and expenses of the cullers are to be paid in equal proportions by the licensee and the Department.

No trees of a less diameter than nine inches on the stump are to be cut, and all timber down to the prescribed diameter is to be taken. In trees suitable for ties, all timber which will make a tie six inches in face must be taken out. Logs eleven inches or over at the top end are to be measured on a board measure basis whether taken out for lumber or ties. Logs of a less diameter than eleven inches at the top end are to be paid for at the rate tendered for ties, including dues, whether made into lumber or ties. Each eight feet in length are to be charged for as one tie, and longer lengths proportionately.

The rights of holders of mining claims or locations or of lands purchased for agricultural or other purposes are to be reserved. On lands which are covered by mining patents, the pine timber only is offered. The same applies on berths in Grand Trunk Pacific block No. 6.

The sale is to be subject to the Crown timber regulations, excepting in so far as inconsistent with any of the above conditions, and to such acts and orders in council as now exist or may be hereafter passed. The

Department does not bind itself to accept the highest or any tender. Tenders are to be enclosed in sealed envelopes, marked "Tenders for Timber Berths," and to be addressed by registered letter to the Minister of Lands, Forests and Mines, Toronto. Maps showing the berths for sale may be obtained from the Minister or from the Crown Timber Agents in the districts where the berths are situated, or copies of the maps and conditions may be seen at the office of the "Canada Lumberman."

The Dangers of Cutting Prices in Order to Move Stocks

Does it pay to cut prices in order to move stock? Everyone will say no, but practically everyone in the lumber selling business indulges in the practice now and then and believes that special circumstances justify him in so doing. What is the real nature of the situation? Say a carload of lumber is thrown on an unwilling market at a sacrifice price. The shipper's yard is probably full and orders are scarce, while the payroll keeps going along the same as usual. The temptation to realize a little money by sacrificing a carload of lumber somewhere is strong, especially if it is accompanied by a possibility of making a fair margin of profit. The car goes forth and when it reaches its destination it may happen that no buyer appears. Demurrage charges commence to accrue. Finally the lumber is peddled around from one office to another until disposed of at a price much lower than the prevailing market price. The shipper, however, often believes that he has made a good move, and goes home in a contented frame of mind.

There is good reason to believe that this contentment is not well founded. It may be that temporarily he has tided himself over a troublesome period, but the immediate present is not alone to be considered in such cases. His action will probably have a future effect which it will not do to overlook. He will find this out when he tries to sell lumber again in the same market. He will then have to face the prices which have been artificially lowered by his forced sale. He will find that it is a simple matter to force prices down. In fact, they need no forcing at all. They go down of their own accord whenever there is the semblance of an excuse for a decline. To force them up again, however, is quite

another matter. To bring about a recovery in prices takes many times longer than it took for the occurrence of the decline. Everyone knows this but few act upon it when the time comes for them to face the music of a slow market and declining receipts. One by one they act as above and the result is that very soon a condition which was artificial and which dealers hoped would only be temporary, becomes permanent and everyone suffers. The particular offender is not the only one to suffer. All others, no matter how they may have sought to maintain prices, have to accept the situation. Consumers are wonderfully quick to learn of reductions in price and to expect them to become standard.

This sort of thing has been going on all over Canada and the United States during the last year or two and will probably continue so long as commercial conditions remain as they are. It will probably take a considerable improvement in business to put an end to price cutting of this sort, and the price cutting itself is one of the most serious factors in preventing the return of normal business conditions. There has been so much of it in Canada that the wonder is that everyone has not been educated by sad experience to act in a more reasonable manner, yet it would be rash to prophesy that any single offender will have profited by experience when he is again confronted by similar conditions. There is great need for some form of organization to bring men to their senses when business is dull and they are subject to pannicky fits. If an association could be devised which would convince members of the futility of price cutting, the lumber business would be one of the most rapid instead of the slowest to recover after a period of business depression.

Good Opportunities for Canadians in South Africa Lumber Trade

In a recent report to the Department of Trade and Commerce, the Canadian Trade Commissioner at Durban, South Africa, writes as follows:

"It is a pity that Canada has so small a share of the lumber trade of South Africa. There is no doubt that the local merchants are afraid of Canadian exports. It has been stated to me repeatedly, that the Canadian lumber is frequently not sent as specified, and that it is often inferior. Two dealers have said to me that the inspection is not rigid enough; whilst this may confer a temporary benefit upon the exporter, it makes a bad impression here, and exerts a most deleterious effect upon the trade.

"From articles I have seen in the 'Canada Lumberman and Woodworker,' I judge that the lumber industry in Canada is not in a too flourishing condition owing to excessive competition, and this would appear to especially affect British Columbia. I also notice in the last issue to hand, a letter to the editor from Messrs. A. R. Bickerstaff & Company, Limited, complaining that Canadian lumbermen do not seem to be interested in the export trade, and that much of their lumber finds its way to foreign countries through the medium of United States dealers, and thus the profit of the latter is lost to our people. All of this seems most unfortunate, that for want of a little enterprise so much good business should be lost to the Canadian firms; it may be ignorance of trade conditions on my part, but I confess I cannot understand why we have not the bulk of the South African trade, which will undoubtedly be a growing one. If British Columbia lumber mills can export their output to Australia and New Zealand, I would think that it would pay them to work into the South African trade, at least if they sent their cargo in sailing vessels.

"The freight rates below were given me by the agents of a Swedish line of steamers, and may be of interest to Canadian shippers: Rates from Swedish to South African ports:—On deals, battens, case-boards and planed boards, 72s. 6d. per standard, excluding landing. On joinery,

match boxes and splints, 100s. per standard, including landing."

The letter referred to in the above report, was published in the "Canada Lumberman" of May 15. A. R. Bickerstaff & Company, Limited, wished to be placed in touch with dealers who would be willing to handle foreign trade in lumber, such as pine, hardwood, mahogany, etc., for which they frequently received enquiries from dealers in New Zealand, Australia, Great Britain, Germany, France, Spain and Cuba. The letter was published in the hope of attracting the notice of those interested. Apparently, however, Canadian dealers are guilty, as the Trade Commissioner in South Africa says, of indifference towards some markets. Why this should be the case is quite a question. British Columbia's export lumber trade is extensive, and has been so since its origin. The lumber trade of Eastern Canada with Great Britain is also extensive. Dealers would surely be consulting their best interests by investigating the openings for trade in other countries. Canadian lumber goes to most of these countries very largely in United States shipments. Its reputation is often injured by being mixed with United States lumber. There is no better lumber in the world than the Canadian products, and with a fair amount of exploitation it should be able to win a commanding position in almost any market in the world. The trade in Great Britain has been built up during a long period of years and as an almost natural course of events. While this was going on and while British Columbia lumber was finding its way into foreign markets across the Pacific, the mills of the United States were supplying the United States markets.

Of recent years, Canadian lumber has met with a continually increasing demand in the United States and much of the lumber which formerly went from Eastern Canada to Great Britain is now being manufactured to suit the United States demand and being sold in markets in that country. So far as Eastern Canada is concerned it does not seem probable that shipments to foreign countries will increase. They are already so successfully transhipped from English markets that no great

advantage would accrue. In Western Canada, however, the case is quite different. The South African trade will be a rapidly growing one. It will be conducted along business lines similar to those with which Canadian shippers are familiar. It would be a great mistake to allow the opportunity to go by unheeded. Shippers in British Columbia should take steps to disabuse the minds of South African importers who are al-

ready prejudiced against Canadian lumber. First impressions are long lived. Specifications should be rigidly adhered to and inspection made, if anything, more rigid than usual, until the trade has made a good start. Once Canadian lumber has obtained a footing on its merits in South Africa, its merits will hold the trade. One more extensive market would be of important assistance in times of business depression.

Frequent Meetings and Plain Talking Would Improve Business

"These associations were founded upon the convictions of two of our great churches, which hold close communion, or private confession, where people get very close together and for a short space tell each other the truth."

A speaker at a recent convention of lumber manufacturers in the United States made use of the above sentence when addressing a number of his fellow members. From the amount of applause which followed the remark it was safe to say that he had struck a large nail on the head. He also said some other things which were equally to the point, and which should be taken to heart by lumbermen in general. There is a great deal too much working at cross purposes among lumber manufacturers and it is hard to understand why this should be the case. Manufacturers of lumber are as much in need of co-operation as any other class of manufacturers, much more even than a good many, as can be understood readily by a consideration of the trade conditions which have prevailed the last two years. If there had been more of co-operation it is beyond a doubt that a long drawn out depression in the lumber market could have been materially shortened. Every one admits this, and everyone has his favorite way of accounting for all the trouble, but few of the proposed remedies are alike. None of them are so much to the point as the remarks of the speaker quoted above. Manufacturers of lumber, like most other manufacturers, are prone to look at business matters through their own spectacles only, whereas if they were to put on some one else's occasionally, they would obtain a better perspective probably, and at least a wider outlook upon actual conditions. It cannot be said with truth that manufacturers are in the habit of deceiving one another purposely, yet by the amount of information which is withheld the result is much the same.

If there were an association which had for its purpose the gathering together of a number of manufacturers, or retailers or wholesalers for that matter, with the object of laying before one another the exact conditions prevailing in each member's business and the problems which each have had to face, a lot of good could be done. It would take some

time for members to get into the habit of taking one another into each other's confidence, as it would go greatly against established custom, yet as shown in the instance under discussion in the quotation above, they would become quite frank with one another in the end and change their business methods entirely. In the case under consideration the members soon acquired the habit of travelling once every month a distance of some 100 miles on the average. At the meetings, each manufacturer states the nature of his troubles; what his stock is like; what he is getting for his lumber; whether he is suffering from car shortage, etc. They did not do this at first, but finally they got down to business and gave information and got information. In conclusion, the speaker on the above occasion said: "It would be folly for you gentlemen to get together once a year and listen to addresses, 'resolute' a little, settle with the secretary, and go home. That is all filigree and folderol."

Large annual meetings are splendid things in their way, but some such associations as the one just outlined would be the most useful kind of association imaginable and would accomplish great results. The association movement has not gone very far in Canada. Possibly this is because of the wide extent of the country and the varied interests. The interests of lumbermen in different localities, however, are often quite similar and many useful associations could be formed which would go a long way toward bringing about the much needed improvements. The Canadian Lumbermen's Association could act as a sort of clearing house for the difficulties of various associations, when these were found to clash with one another. Local associations, whether formally organized or simply growing out of friendly business meetings, could be brought into existence in every part of Canada. In the West a few have already appeared and are doing successful work. Lumbermen in Canada ought to adopt more heartily this system which has grown to large proportions in the United States and which from its inception has borne fruits which more than justify its existence. Above all, annual meetings are not enough. Quarterly or, if possible, monthly meetings are the kind that are needed.

Another Evidence of Competition Not Being the Life of Trade

At the recent meeting of the National Lumber Manufacturers' Association, in the Hoo-Hoo house at the Seattle Exposition, the meeting of the cargo branch was the occasion of a number of interesting short speeches being delivered. One of the most interesting addresses was by Mr. R. H. Alexander, of Vancouver, B.C. Mr. Alexander touched upon a subject which one seldom hears discussed, but which, if carefully studied, would probably bring good returns to lumber manufacturers, by eliminating a useless and costly competition.

Mr. Alexander stated that three years ago a meeting of a similar nature was held in St. Louis, and it was proposed at that meeting that lumbermen from the Pacific coast and Gulf States should get in touch with each other through their association secretaries and endeavor to arrive at some equitable basis for the handling of export shipments. It was brought out that pitch pine of the Gulf States really was the only competitor of Douglas fir from the north Pacific coast States in the various foreign markets, and this competition was working a menace to market conditions respecting prices. Mr. Alexander stated that there was no source from which timber could be obtained except the Pacific coast and Gulf States for export, and it was a big mistake to give it away. He stated that no amount of conservation would replace the large timber that is being cut on the coast. In speaking of present prices, he called attention to the fact that the present price is \$7 less than that of two years ago. This difficulty, he stated, rested with the manufacturer and not with the consumer. He called attention to the fact that export trade

on this coast has not increased at an equal ratio with the production of the mills, and that no new markets have been added to those to which the coast has been catering the last forty years. It was a noticeable fact that when the market price of pitch pine declined the Douglas fir market declined in sympathy. He pointed out also that pitch pine manufacturers have a decided advantage over fir manufacturers on the coast in that less time is required for a shipment to reach European markets from their territory than from the coast, which was an important item to be considered. He stated that Australia consumed 72 per cent. of the Pacific coast cargo business; China and South America, 8 per cent.; the United Kingdom, 8 per cent., and Central America, 6 per cent. Of the markets to which this coast is able to ship he pointed out that Australia always had been the biggest consuming market, but of late South America, much to his surprise, had been the best. Mr. Alexander expressed the belief that the price situation would improve as a result of general business improvement throughout the country.

Mr. Alexander's remarks upon the conditions relating to competition between the Pacific coast and the Gulf lumber, are in reality only a specific and forcible example of the conditions prevailing in the whole lumber industry. There is more useless throat cutting among lumber producers than among any similar body of manufacturers. Lumber is hourly growing more scarce and more in demand all over the world, yet lumber manufacturers continue to cut far in excess of the demand and then to accept ruinous prices for their products.

Lumber Tariff Adopted by United States

Rough Lumber Duty Reduced from \$2 to \$1.25 per Thousand Feet — Duty on Shingles Increased by 20 Cents per Thousand Pieces—Details of Change

The passage of the United States tariff bill after many months of discussion and doubt will be welcomed by Canadian and United States lumber manufacturers and dealers. From the outset it was apparent that whatever alteration would be made in the duty on lumber it would be in the direction of a decrease. What the effect of this will be is extremely difficult to foresee. Opinions beyond number have been given by people who are supposed to be acquainted with actual conditions, but these opinions have varied from one extreme to the other.

The duties which are to be enforced from the present are as follows, with comparisons with the former duties:

Articles	Dingley Rate	New Minimum Rate
Lumber (whitewood, sycamore, basswood), rough ..	\$1.00	\$.50
Planed one side	1.50	1.00
Planed one side and tongued and grooved	2.00	1.25
Planed two sides	2.00	1.25
Planed two sides, tongued and grooved	2.50	1.62½
Planed three sides	2.50	1.62½
Planed four sides	3.00	2.50
Lumber not otherwise specified (pine, hemlock, spruce, fir, etc.), rough	2.00	1.25
Planed one side	2.50	1.75
Planed one side, tongued and grooved	3.00	2.25
Planed two sides	3.00	2.25
Planed two sides, tongued and grooved	3.50	2.37½

Porch and window blinds, baskets, curtains, shades, or screens of bamboo, wood, straw, or compositions of wood, not specially provided for in this section (ad valorem)	35%	43.75%
If stained, dyed, painted, printed, polished, grained or creosoted (ad valorem)	40%	50%

Articles to be Admitted Free of Duty

The paragraphs regarding the free list are as follows:

"The articles mentioned in the following paragraphs shall, when imported into the United States or into any of its possessions (except the Philippine Islands and the Islands of Guam and Tutuila), be exempt from duty:

"Casks, barrels and other containers of American manufacture exported filled with American products, or exported empty and returned filled with foreign products including shooks and staves when returned as barrels or boxes.

"Kindling wood.

"Wood: Logs and round unmanufactured timber, including pulpwoods, fire wood, handle bolts, shingle bolts, gun-blocks for gunstocks, rough hewn or sawed or planed on one side; hop poles, ship timber and ship planking; all the foregoing not specially provided for in this section.

"Woods: Cedar, lignum-vitæ, lancewood, ebony, box, granadilla, mahogany, rosewood, satinwood, and all forms of cabinet woods, in the log, rough, or hewn only, and red cedar timber, hewn, sided, square or round; similar wood unmanufactured, or not further advanced than cut into blocks suitable for the articles into which they are intended to be converted; sticks of partridge, hair wood, pimento, orange, myrtle, bamboo, rattan, reeds unmanufactured, india mallee joints, and other woods not specially provided for in this section, in the rough, or not farther advanced than cut into lengths suitable for sticks for umbrellas, parasols, sunshades, whips, fishing rods, or walking canes."

Temporarily, the general tariff of the United States applicable to forest products is that shown previously in the tabular list quoted under

the caption "New minimum rate." From and after March 31, 1910, the general tariff of the country will be the new minimum rate plus 25 per cent. of the value of the import, subject to such modifications as will be found in the act, here quoted:

"That from and after the 31st day of March 1910, except as otherwise specially provided for in this section, there shall be levied, collected and paid on all articles imported from any country * * * the rates of duty prescribed by the schedules and paragraphs of the dutiable list of section 1 of this act, and in addition thereto 25 per centum ad valorem, which rates shall constitute the general tariff of the United States: Provided, that whenever after the 31st day of March, 1910, and so long thereafter as the President shall be satisfied, in view of the character of the concessions granted by the minimum tariff of the United States, that the government of any foreign country imposes no terms or restrictions, either in the way of tariff rates or provisions, trade or other regulations, charges, exactions, or in any other manner, directly or indirectly, upon the importation into or the sale in such foreign country of any agricultural, manufactured or other product of the United States, which unduly discriminate against the United States or the products thereof, and that such foreign country 'imposes no export, bounty or prohibition upon the exportation' of any article to the United States which unduly discriminates against the United States or the products thereof, and that such foreign country accords to the agricultural, manufactured or other products of the United States treatment which is reciprocal and equivalent, then after proclamation to the effect by the President of the United States, all articles when imported into the United States * * * shall, except as otherwise herein provided, be admitted under the terms of the minimum tariff of the United States as prescribed by section 1 of this act."

President Authorized to Apply Additional Tariff

To the President is delegated authority, in his discretion, to apply the terms of his proclamation to the whole of any foreign country or any political subdivision thereof, and similarly to release the operation of such proclamation. The words of the act on this point are:

"The proclamation * * * may, in accordance with the facts as found by the President, extend to the whole of any foreign country, or may be confined to or exclude from its effect any dependency, colony, or other political subdivision having authority to adopt and enforce tariff legislation, or to impose restrictions or regulations, or to grant concessions upon the exportation of articles which are or may be imported into the United States."

This section of the act is directly applicable to Canada. At the present time New Brunswick and Nova Scotia are the only provinces that would not be affected by the discriminatory features of the bill and which would be entitled to the minimum tariff. Since Ontario, Quebec and British Columbia all place restrictions of one sort or another upon the exportation of timber cut from Crown lands their products imported into the United States presumably would be charged the maximum or general tariff rates.

There is, however, reasonable doubt as to the application of these provisions. The simple fact that a country imposes an export charge upon forest or other products, or forbids their exportation altogether, would not seem to forbid the minimum tariff being extended to it, provided there is no discrimination against the United States, i.e., provided that country treats all other countries alike. If Canada or any of the provinces absolutely forbids the exportation of timber cut from Crown lands to any country the United States would apparently not be discriminated against. There is a possibility, however, that Canada's preferential treatment of Great Britain may lead to the application of the general or maximum tariff to Canadian products.

The bill as framed by the Ways and Means Committee of the House provided that preferences in favor of the mother country by a province or dependency, or vice versa, should not bar them from the advantages of the minimum tariff, but such proviso was omitted from the tariff as adopted.

If the maximum tariff were applied to Canadian lumber the duty would be much higher than it was under the Dingley tariff.

One of the most recent opinions upon the effect of the tariff reduction was given by Mr. Edward Hines, of Chicago, president of the National Lumber Manufacturers' Association. Mr. Hines, in an interview, said: "The reduction of the duty on lumber does not mean cheaper lumber, although that view is taken by many people not familiar with the true situation. Lumber passes through too many hands from the time it leaves the forest until it reaches the consumer, to make it possible for the latter to reap the benefit of the cuts in the Dingley tariff. I am sure

there will be a great revival in business, not only in the lumber industry, but in all others, now that the tariff promises soon to be disposed of. Nearly all lines of business have been working under handicap while the tariff schedules have been under consideration."

The outlook for the consumer is pretty significantly put by Mr. Hines in this interview. It is scarcely to be expected that the 75 cents a thousand reduction will go into the consumer's pocket, when there are so many hands for the lumber to pass through on its way from the forest to the consumer. However, prophesying is not now in order. Everything remains to be seen, and we shall see what we shall see. Certainly, as Mr. Hines says, the chances for a revival of trade are encouraging now that the tariff uncertainty has been removed.

Many Rush Orders from the Prairies.

Mr. A. D. McRae, president and general manager of the Fraser River Lumber Company, Fraser Mills, B.C., who recently visited Toronto, in an interview with the "Canada Lumberman," said: "The volume of business in the West is fine and the crops are fine. It is pretty hard to foretell what the crops will be in western Canada. They will be anywhere from 130,000,000 to 150,000,000 bushels, depending on the weather during the next few weeks. We are going to have good prices for the crops and they are the controlling factor so far as the lumber business is concerned. Everything depends upon the crops. At present all our orders are rush orders, and everything is going to the prairies. That condition, however, will change as soon as the crops are off. I believe that a 20 per cent. increase in the present volume of business will advance the price of lumber \$2 a thousand in the West.

"I spent three weeks in Winnipeg on my way here. Stocks in the West are not heavy. Sixty days of good buying would clean up the stocks in the western yards. We are asking 50 cents to a dollar more now than we were 30 days ago, because we have all the rush business we can take. I do not fancy there is any mill at the coast which has not the same conditions."

Mr. McRae was asked for his views upon the question of obtaining perpetual licenses for timber limits in British Columbia. In reply he said: "I am the president of the association which is seeking to obtain an improvement in the titles for timber limits. It is a very live question now, and we hope to have the licenses made perpetual. We will be able to do so if we receive full co-operation. To make the association effective we ought to have the support of every license holder out there. The day for small mills has gone by. It is a question now of large plants requiring an investment of a million dollars or more. A man cannot afford to put money into a plant unless he can count upon his supply of timber. Ninety per cent. of the land on which timber is located in British Columbia is valueless for any other purpose. At the present time the Government is getting \$140 annually for every mile under license. They tell us that if we will carry this license along to the end of 21 years, no Government will legislate us out of our vested rights. We will be subject to whatever conditions they will put into effect regarding the timber, but will not be put in a position of having to compete with some outsider for our own timber.

"Compound the payments we make at six per cent. interest. The man who takes a mile and pays \$140 a year annually for 21 years, will have invested over \$8,000 in that mile. No Government would throw him out of his rights. All we are asking is to put an assurance of this in the laws. These 21-year licenses simply make a bid to the holder to get in and log the limit. He is not going to lose his money, and unless he is sure of some steady title, the thing to presume is that he is going to take the lumber off. The talk to-day is not of the destruction of the forests, but of the preservation of the forests. Nothing will ever do more for their preservation than the granting of fixed titles, under, say, a fixed stumpage or a royalty. The Government may make the charge \$2 or \$5 or more before the timber is removed. We do not care about that. All we want is a sure title. If we do not get a perpetual title, people who have put a few thousand dollars in licenses will put in mills and cut the timber."

The following comparative statement of timber, masts, bowsprits, spars, staves, etc., measured and culled to date, has been issued by the Supervisor of Cullers at Quebec under date of August 4:

	1907	1908	1909
Waney white pinecubic-feet	644,880	669,840	622,560
White pine	77,560	97,120	51,840
Red pine	4,640	4,080	5,680
Oak	209,800	342,560	455,840
Elm	186,960	74,080	61,880
Ash	9,480	4,000	520
Birch and maple	63,680	59,880	57,240

F. Bickerdike, trade agent for Canada at Belfast, reports that 23 ships, with a total of 123,430 tons, are now under construction there, and the demand for Canadian lumber is emphasized.

U.S. Imports and Exports of Timber

Comparative Statistics Showing Quantities for June and for the Twelve Months

The imports of wood and its manufactures into the United States during June and the twelve months ending June were as follows:

	June		12 months ending June

Statistics relative to the production of tight cooperage stock are annually collected and published by the Bureau of the Census of the United States in co-operation with the Forest Service of the Department of Agriculture. The following advance statement for 1908 has just been issued:

Staves (in thousands).

Classes	1908		1907	
	Quantity	Value	Quantity	Value
Aggregate	345,280	\$10,009,295	385,232	\$12,942,885
Sawed	301,728	7,383,806	325,653	9,062,678
Bucked and split	18,339	910,105	25,082	1,277,104
Hewed	8,019	758,500	12,737	1,513,203
Beer and ale	17,194	956,884	21,760	1,089,900

Heading (in sets).

	1908	1907
Aggregate	20,515,072	27,692,994
Sawed	19,703,525	25,828,909
Beer and ale	811,547	1,864,085

In common with the products of most of the group of forest industries, tight cooperage stock showed a falling off in production during the calendar year 1908 as compared with 1907. For staves of all classes this decrease amounted to 10.4 per cent., being least in sawed staves and beer and ale staves, where it was 7.3 per cent. and 21.0 per cent., respectively, and greatest in bucked and split and hewed stock, where the decreases were 26.9 per cent. and 37.0 per cent., respectively. The showing for heading production was similar to that for staves. While decreases in the average value per thousand of the various classes of stock were general, they were in most cases slight, and some stock showed substantial gains in this respect. This was particularly true in bucked and split and hewed staves, a large part of which are exported, and in beer and ale stock.

Exports of wood goods from the United States to British North America were as follows:

	June		12 months ending June	
	1908	1909	1907	1908
Timber, hewn and sawed ...	\$120,441	\$127,663	\$1,268,640	\$1,190,158
Lumber, boards, deals, joists, planks and scantling	232,322	359,422	4,971,808	4,269,179
				3,317,043

A New Bill of Lading Adopted

**Important Concessions Made to Shippers—Carriers
Co-operate in the Change — Effective October 1**

The Board of Railway Commissioners has made an order approving of the two forms of bill of lading for use in Canada, namely that for consignments "to order" and that for so termed "straight consignment," which were submitted by the authorized representatives of the carriers and shippers some time ago for approval. It is gratifying to note that the shippers and carriers were able to agree upon the conditions embodied in the order. The committees worked on a suggestion thrown out a little over a year ago by Chairman Mabee, who suggested that an effort be made to agree as far as possible upon the terms of the contract. The new conditions are the result of these negotiations. It is also some satisfaction to note that the forms of bills of lading are agreed upon and presented to the Commission for approval within a year from the date of the meeting of the Canadian shippers in Toronto for the purpose of organization.

The various committees in charge are entitled to great credit and the thanks of the shipping public for their devotion to the task which they undertook and we believe have carried out so successfully, particularly so as all the principal shipping bodies and Boards of Trade had to be communicated with and their views and endorsement obtained. Naturally a large share of this work fell upon the chairman of the general committee and the general secretary.

The new conditions, effective October 1st, are so entirely different from those which appear on the back of the present bill of lading that space will not permit of a comparison. It is believed they define and make clear the relative positions of the shipper and carrier. There is an obligation imposed upon the carrier from which it was formerly relieved, due to the fact that the old conditions were prepared by the carriers for the carriers. The shipper, owing to lack of organization, did not have the same opportunity to have a say in the matter. As a result the contract was entirely a negative one. In other words, the carrier under its conditions placed all responsibility upon the shipper, and even in the case of negligence on the part of the carrier the shipper had to prove it. This has been entirely changed, the carrier must under the new contract prove freedom from negligence.

Particular attention is called to section 2. Under this section the initial carrier is made responsible for the carriage and safe delivery of goods at destination if in Canada, whether or not they pass over one or more lines. It is also responsible through to destination in all cases where there are joint tariffs. This applies to foreign countries. The fact of the carriers agreeing to the above, as well as the many other favorable features of the bill from the shippers' point of view, are a good illustration of the friendly spirit in which the negotiations were carried on and the recognition of the respective rights of all concerned. The representatives of the carriers acknowledged that many of the conditions at present in effect were relicts of barbarism, and joined in an honest effort to evolve a contract that would make clear the relative obligations of the contracting parties.

The importance of the bill of lading, particularly under the new conditions, cannot be overestimated. Lewis E. Pierson, chairman of the Bill of Lading Committee of the American Bankers' Association, says: "Next to the currency—and in speaking of currency I include bank cheques—the bill of lading is to-day the most important instrument in commerce. It is the symbol always given by the carrier to the shipper and used to represent merchandise in transit. Every article of manufacture, from shoe strings to a Corliss engine, in the journey from factory to market, is represented by a bill of lading. Every one of our great staple crops, the grains, cotton, in fact every line of farm produce, as well as live stock, goes to market only after the issue of a bill of lading by carrier to shipper. Likewise the shipment of the products of our forests and mines is only initiated after the bill of lading has been issued. Thus it is readily seen that in every part of the country in connection with all its important industries the bill of lading is the one vital document representing title while the goods are in transit and removed from the immediate possession of the owner."

The credit for obtaining the adoption of this new bill of lading is almost entirely due to the Canadian Manufacturers' Association, the transportation department of which has used every effort to bring about the change. It is believed that the new conditions are more favorable than those recommended by the Interstate Commission of the United States and used generally at the present time in the United States. One point wherein shippers will be materially benefited under the new bill is in the matter of making claims. Under the old bill claims had to be filed within 36 hours after the delivery of the goods. Under the new conditions they may be filed within four months, that is for damage. In the case of non-delivery, claims are to be made within four months after a reasonable time for delivery has elapsed.

It seems that the first factory circular saws, as we know them, were used for cutting teeth in the wheels of wooden clock works.

Lumber Resources of the Winnipeg Basin.

In a report by W. Thibaudeau, C.E., to the Surveyor-General of the Dominion, reference is made to the pulpwood resources in the drainage basin of the Winnipeg river in Manitoba. Mr. Thibaudeau reports as follows:—

"The drainage basin of Winnipeg river in Manitoba, exclusive of ten miles on both sides of the Canadian Pacific Railway right-of-way, and exclusive of the farming lands, has an area of about 1,840 square miles, which, added to the drainage basin of English river, in Keewatin, which joins Winnipeg river east of the boundary and covers an area of 9,500 square miles, forms a total of 11,340 square miles. Assuming about half this area to be covered by rivers, lakes and swamps, the balance, 5,670 square miles, or 3,628,000 acres, is forest, averaging twenty cords to the acre; this equals 72,576,000 cords of pulpwood, which is a conservative estimate. Assuming this to be equal to a supply for twenty years, it would allow a consumption of 3,628,800 cords per year, or about 3,000,000 tons of pulp, or 9,615 tons per day, which would require about 500,000 horse-power to convert it into pulp.

"Within the area alluded to the proportion of pulpwood from my own observations and information gathered from many sources is about as follows: poplar, 55 per cent.; spruce, balsam and tamarack, 25 per cent.; jackpine and a few white birch, 20 per cent. Poplar is found mostly along the rivers and lakes on the flats. As one goes inland spruce, balsam and tamarack, take the place of poplar. Jackpine is found on rocky ridges. The present size of the timber is a growth of about twenty years. Outside the pulp area already described, but tributary to Winnipeg and English rivers in Ontario, there are 12,000 to 15,000 square miles of the same kind of wood, existing under the same conditions, and which would average about the same per acre.

"To preserve the pulpwood industry it is imperative that stringent regulations should be adopted and enforced prohibiting the cutting of trees under a certain size, say three inches in diameter. The owner of the timber berth should not be allowed to cut over the same area twice in twenty years, except in special cases. I saw only two places where the timber had been destroyed by fire. Although the country is rough it would be easy to construct a railway logging road at a reasonable cost. Logging with teams would have to be done in winter owing to the swampy character of a portion of the ground."

Flooring Blocks Wanted in England.

The Canadian Trade Commissioner at London, Eng., in a recent report to the department writes as follows:

"From time to time inquiries reach us from United Kingdom firms who seek supplies of maple flooring blocks and wish to be placed in communication with Canadian manufacturers who may be in a position to quote for regular supplies.

"It would appear that at the present time there are few, if any, manufacturers in Canada who are making a specialty of these blocks. In any case, we cannot learn that export trade has been established to any extent. It is stated that considerable quantities are annually imported into the United Kingdom, depending upon the amount of constructional work which is being undertaken, but a considerable number of carloads reach Great Britain each year.

"The following specification of an inquiry which was made recently by a large London timber firm is given for the information of any Canadian manufacturing enterprise which may wish to submit quotations:—

1 inch x 3 inches x 9 inches planed to $\frac{7}{8}$ -inch x 3 inches x 9 inches
 $1\frac{1}{4}$ inch x 3 inches x 9 inches planed to $1\frac{1}{8}$ inches x 3 inches x 9 inches
 $1\frac{1}{2}$ inch x 3 inches x 9 inches planed to $1\frac{3}{8}$ inches x 3 inches x 9 inches

"These blocks are required with V-groove on each side and planed all over.

"The revival in the pastime of roller skating has been followed by the erection of a number of rinks in various parts of Great Britain, and if the craze continues similar skating rinks will presumably be built in almost every large centre of population. This has created an active demand for maple flooring, and although it is understood that no great difficulty is being experienced in obtaining supplies, still the matter should be of some interest to the Canadian lumber trade, in view of the large supplies of maple obtainable in certain parts of the Dominion."

The Lumber Mutual Fire Insurance Company, of Boston, Mass., have issued a folder with their financial statement dated June 30, 1909. The assets shown amount to \$545,760.93 and the liabilities to \$177,880.47, leaving a net cash surplus of \$367,880.46. The insurance in force totals \$13,177,589.94, the premiums being \$317,802.19. Contingent assets, as capital, amount to \$953,406.57, bringing the total assets to pay losses up to \$1,499,167.50. The losses in 1909 amounted to \$31,749.11 and dividend payments to \$58,275.66. The gain in net cash surplus for 1909 was \$63,792.14. From 1895 to 1909 the total losses paid to policyholders amounted to \$549,446.32, and the total dividends to \$453,622.27. The rate of dividend to policyholders on terminating policies is 40 per cent.

News from the Maritime Provinces

St. John River Commissioners at Work —New Brunswick's Pulpwood Question

The international commissioners who are enquiring into the St. John river log driving difficulties held a session at Fredericton on July 29th, when evidence was given by Lewis H. Bliss, manager of the St. John River Log Driving Company; Allan H. Randolph, of Randolph & Baker, and R. A. Estey, a practical lumberman of forty years' experience. The commission met also at St. John on Tuesday, August 10th, and will meet later at Bangor and Calais.

Mr. Bliss in his evidence stated that people living along the river had the same right now to raft logs as they had before the amalgamation of the Fredericton Boom Company and the St. John River Log Driving Company. He described the river between Grand Falls and Fredericton, stating that at White Rapids, at the mouth of the Aroostook and at Muniac, it was difficult to drive logs because the river was rocky, and at low water the logs had to be dragged over. From the highest pitch of the water about June the first, it fell at the rate of one foot every 24 hours. It was imperative therefore to have the logs reach the booms during the freshet season. The company put out its booms just as soon as the ice went out in the spring.

About 75,000,000 out of a total of 140,000,000 came into the booms on high water this season, with little expense for driving. On some occasions no logs had reached the booms at all. They all laid over and went past the booms with the ice in the following spring, being afterwards caught, at great expense, in the drift drive. This year a large proportion of broken logs had come over with the first of the drive. Many of these belonged to the St. John Lumber Company and came down with the ice at low water.

The St. John River Log Driving Company, he said, had full control of the appliances at the Fredericton booms, and of the driving of the logs from Grand Falls to Fredericton, and from the boundary line on the Aroostook. They had the exclusive right to drive the river between these points and the power to charge on all loose logs except bank logs. They collected no toll upon rafted logs. They had control of the piers, assorting works and holding booms. In 1906, there had been almost 6,000,000 in the drift drive and in 1907 nearly 3,000,000. It cost much more per thousand in 1907 than in 1906 because it took about the same crews and appliances to gather a small quantity as it did a large quantity. The company kept a record of all marks at the booms and sorted the logs for the owners. He did not think it would be possible for a private individual to boom any great quantity of logs between Fredericton and Woodstock, as he would have to stop all the logs and sort them. Fredericton was the uppermost point at which logs could be rafted with safety. The average depth of water at Fredericton in summer was about ten feet.

Mr. A. H. Randolph, president of the Randolph & Baker Lumber Company, who manufacture from 15,000,000 to 18,000,000 feet of lumber per year, in giving evidence said that his company procured logs on the upper St. John and its tributaries, and had from 7,000,000 to 10,000,000 coming over Grand Falls each year. This year their total was 8,000,000. They had a drive of 6,000,000, being on East Lake and in Grand Rapids in the year 1905. Logs were frozen in the ice during the winter and in the spring of 1906. Mr. Sweeney, the contractor, delivered them at the corporation limits. He was informed that his logs and a quantity belonging to others went into the sorting booms at Van Buren. A considerable portion of them were not rafted at the Fredericton booms that year. The boom company carried over two or three million feet of logs at the Mitchell boom that year. Many of the logs were picked up in the drift drive the following year. He was satisfied that his logs were frozen in between Van Buren and the boom limits. Mr. Estey, who was employed by the log owners to watch the Van Buren booms, informed him that his logs had gone into the Van Buren sorting works in the season of 1906.

Mr. Randolph said that he had personal knowledge of the upper St. John and its tributaries. He had been on the Tobique and also the Madamaska rivers as far as Temiscouata lake. From his knowledge of the conditions he thought it possible to conserve the water for driving purposes by means of storage dams. He was aware that such storage dams were in existence on other rivers, where conditions were similar. He knew of a dam on the Trouser's lake where great good was received. It was a wooden dam, which could be built for about \$1,000.

Mr. R. A. Estey, the next witness, had been connected with the lumber business about forty years. His operations being confined to the Tobique, which entered the St. John 24 miles below Grand Falls, he was familiar with the river from the falls down. He had been in the employ of the St. John Log Driving Company for three years prior to this year. In 1906 he inspected the sorting of logs at the Van Buren booms. There were a large number of logs in the booms early in the season. There was a jam of about 25,000,000 on the first of June. There was also a jam of 10,000,000 at Grand Isle. The jam was pretty well handled that year. The logs that got in first and went back of the island remained there all

summer. These logs were destined for points down river. They were not taken out of the booms until August.

Mr. Estey had been on the Green River, and considered it feasible to construct storage dams there. Such dams would facilitate driving, but it might not be possible to refill them after July 1. He knew of a storage dam on the Shogomoc, which had been of great assistance in driving. It cost \$2,500, and gave six feet of water over a 1,500-acre lake. Fraser & Sons had a storage dam at Trouser's lake which carried an eight-foot head. It spread over a large square and had proved very efficient.

Further evidence will be taken at later sessions.

Pulpwood Waste Being Lessened in New Brunswick.

"At the present time New Brunswick has 10,000 square miles of timber lands under license, a gain of 88 square miles over the previous year and of 7,500 over that of 1880," said Hon. W. C. H. Grimmer, Surveyor-General of New Brunswick, recently in discussing forest conditions in his province. "In all cases the upset mileage prices of our timber areas is \$20 per square mile and the stumpage price ranges from 40 cents for hemlock to \$1.25 for spruce, pine and cedar. The annual cut of lumber on our areas is about 150,000,000 superficial feet, or about one-half the estimated growth.

"There is, however, a considerable portion of our lumber being cut for pulpwood, which, after being rossed, is shipped to United States ports, and this business is rapidly becoming a problem in the forest administration of New Brunswick. It is an easy matter to prove that a great deal less money is left in the province by cutting, rossing and shipping this lumber than would be paid out for manufacturing it here. While this is true, the really serious question is that the cutting of pulpwood will soon deplete the forests. In this connection I might say that it is contended by some of the large pulpwood operators in the province that it can be easily demonstrated that by judicious cutting the forests will not only be preserved in the quality and quantity of the timber, but will actually be increased.

"The question of cutting undersized lumber has also bothered us considerably. We found this year that permits had been given some time ago to many applicants to cut this wood. The result was that large quantities of undersized spruce were cut, which in a decade or so would have become good sized logs. The new policy of my department is that where spruce is found on examination by competent persons to come to maturity or to be fit for good sawlogs in 75 years, or under an average of 14 inches diameter breast high, no permit to cut the same is granted. In stunted growth and on barren lands, where it has been ascertained by counting the rings that it has taken 150 to 200 years for spruce to reach nine inches in diameter, permits have been given to cut such lumber, and also to thin out thickets, so as to admit sun and air, and stimulate growth.

"We are lessening pulpwood waste by insisting that now the whole tree must be taken out of the woods: at all events, that logs exceeding five inches in diameter at the small end must be taken out."

Dartmouth, N.S., is rejoicing over the arrival of a carload of lumber for shipment by the brigantine "Don" to St. Pierre. The shipment will amount to about 50,000. The cause of rejoicing is that Dartmouth has long envied Halifax its foreign lumber shipping trade and has hoped to have a share for itself. The arrival of a carload of lumber has caused the city to dream of a forest of masts in its harbor.

United States Newspaper Seeking Pulpwood in Eastern Canada.

A. B. Macdonald, jr., of the Kansas City "Star," one of the leading newspapers of the south-western States, was recently in St. John, N. B., his object being to look for supplies of pulpwood. The Kansas City "Star," he said, is the only newspaper in the United States that has its own paper mill and manufactures all the paper it uses, which in the "Star's" case is a very large amount. Until recently the management of the Kansas City "Star" has been buying its pulpwood in Wisconsin, but since the removal of the duty on pulpwood from New Brunswick and Nova Scotia, Mr. Macdonald says they intend to buy it in these provinces, ship it by water to New Orleans, and thence by rail to Kansas City. The amount of pulpwood required, he added, will keep a pulp mill busy. Mr. Macdonald visited all of the pulp mills in Nova Scotia and at the mouth of the Miramichi. He said that the spruce of the eastern Canadian provinces makes a superior quality of pulp, and since the removal of the duty he anticipated that they would be able to get their full supply there.

Merritton, Ont., uses the liquor from the digesters of the paper mill instead of water for street sprinkling, and finds that once every two weeks is sufficient to keep down the dust. The possibilities in the way of utilizing by-products are ever on the increase. Here is one which will prove very interesting to paper manufacturers.

Lumber News at Western Points

Car Shortage threatened during Grain Movement—Edmonton to have Storage Booms

A meeting of the Mountain Lumberman's Association was held at Nelson, B.C., on July 30, at which Otto Iachmund, Otis Staples, P. Lund, E. S. Sanders, F. E. Snie, F. W. Hess, A. F. Krappel, G. G. Jewell, W. E. Cooke, M. B. King, C. O. Rodgers, W. N. Poole and others were present. After the meeting, Mr. W. A. Anstie, secretary of the association, said that he had been gratified to learn that the volume of business which the mountain mills had been doing for the past six months warranted a considerable advance over the prices which have prevailed during the past year. Mr. Anstie continued: "And it is encouraging to learn that the manufacturers are now charging within \$2 a thousand feet of the prices which were obtained prior to the big slump in 1908. The prices have been since then far too low and a return to more satisfactory conditions seems certain."

"I have been informed unofficially by prominent traffic officials of the C.P.R. that if the present excellent crop prospects are realized in any measure equal to the indications the railways will be unable to provide the lumber industry with an adequate car service once the harvest on the prairies is completed and the movement of the grain commences, it having been the custom of past years to give the grain crop precedence over other commodities. The lumber manufacturers, in view of the period of depression from which they are just emerging, are much alarmed at this prediction of traffic officials, and a strongly worded resolution to the railway companies was proposed and adopted at the meeting. I would point out that the consuming public of the prairies, as well as the lumber men, will suffer a great hardship unless adequate provision is made for the transportation of lumber. It is therefore clear that it will be to the interests of the retailer throughout the prairie provinces to anticipate the demand for lumber as much as possible and to take advantage of the next six weeks to lay in a supply for the fall trade."

Inland Empire Production.

Three hundred and fifty billion feet of standing timber, estimated, in those portions of eastern Washington and Oregon, north and central Idaho, western Montana and south-eastern British Columbia, comprising the Inland Empire, converted into merchantable lumber, would provide sufficient materials for the construction of 17,000,000 four and five-room buildings or enough to house the nation, says the "Mississippi Valley Lumberman." At the present rate of cutting, 1,250,000,000 feet a year, this available supply will last nearly 300 years, not allowing for the growth it will make, while at the prevailing cost of cutting and marketing, placed at \$10 a thousand feet, labor alone will receive \$3,500,000,000.

The 400 mills in the district, with a possible capacity of 3,000,000,000 feet a year, represent an investment of \$15,000,000 for plants, the employment of working capital of from \$15,000,000 to \$20,000,000 and the disbursement of approximately \$12,500,000 in wages and for supplies. These plants cut 1,250,000,000 feet of lumber in 1908, when sixty per cent. of the product, composed chiefly of western soft, red and white pines, larch and fir, with a sprinkling of other woods, was shipped by rail to various parts of the United States, as far east as the Atlantic seaboard, the bulk going into the north central states, while 40 per cent. was marketed in local territory. The transportation of this output would require nearly 60,000 cars, while between 40,000 and 50,000 were employed in the industry at wages ranging from \$2 to \$7 a day.

The industry, which added about \$18,000,000 to the wealth production of the district in 1908, dates its real beginning from 1901, and has gained in importance by leaps and bounds. The range of progress, showing that the mill men are fully alive to the situation, is from the small mill operating circular and up and down saws, driven by portable steam engines and water wheels in the pioneer days, to the plants of the present day, containing the most complete equipment that mechanical genius has devised. There are in the district a score or more mills, declared by experts to represent the highest type of manufacturing apparatus, while with the numerous logging roads and waterways the logging camps are as near perfect as system can make them.

Nothing approaching actual statistics was compiled during the period from 1887 to 1903, when the industry was in its infancy, with operations for the first four years confined almost exclusively to local consumption. Forty-one per cent. of the 157,946,213 feet cut in 1903 was marketed in local territory, while the following year 43 per cent. of 229,389,545 feet found market in the Inland Empire. The cut for 1905 was 634,553,466 feet, with 42 per cent. used in the district, and in 1906 the output of the mills was near the 1,000,000,000 mark. The cut in 1907 was estimated at 1,000,000,000 feet, while for last year the total production was estimated at 1,250,000,000 feet. The manufacture of 142 mills, reported for 1908, is placed at 672,944,957 feet, with 700,762,983 feet of stock on hand at the beginning of the year, as against 989,820,684 feet sold by 177

mills in 1907, with 569,069,646 feet of stock on hand in January, 1908, and 967,729,098 feet manufactured by 179 mills in 1906, with 489,721,633 feet on hand January 1, 1907.

In addition to the output of the saw and planing mills there are products of the numerous box, sash and door and cutting-up plants, which are marketed in north-western, western and eastern territory. There are also shingle and lath mills, which have large capacity, but there are no statistics at hand to show the yearly production.

The decrease in sales during 1908 is assigned chiefly to the difficulties encountered by shippers in obtaining reasonable freight rates on consignments to Dakota, Nebraska, Minnesota and other eastern points, the other factor being the curtailment of building operations in those States resulting from the financial flurry in the fall and winter of 1907. It was followed this spring by the uncertainty as to the outcome of the tariff legislation on lumber and other commodities and staples, during which period many of the dealers in so-called eastern territory permitted their stocks to run down, but it is believed that with the excellent crop prospect that the business will adjust itself shortly.

Storage Booms for Edmonton.

Hon. Wm. Pugsley, Dominion Minister of Public Works, recently visited Edmonton, Alta., and was interviewed by the lumbermen of Edmonton and Strathcona regarding the necessity for constructing storage booms. The Minister assured them that booms, with a capacity of fifty million feet, would be constructed in time for next year's cut. The lumber firms have suffered great losses, from year to year, by being unable to take care of their season's catch of logs during flood time on the Saskatchewan river. They have appealed to the Dominion Government for help on several occasions, and last June, after an exceptionally heavy loss, they sent representatives to Ottawa, who made a personal appeal to Mr. Pugsley. Full consideration of their demands was promised. Mr. Pugsley, at the interview, offered the installation by the Dominion Government of storage booms with a capacity of 50,000,000 feet of logs at a point ninety miles up the river. An effort will be made to have these booms completed in time for the cut next spring. The large timber areas up the river owned by the Dominion makes the Government more particularly interested in insuring the safety of timber on the river.

Canada's Forest Products.

At the special meeting of the Canadian Forestry Association to be held in Regina, Sask., on Friday and Saturday, Sept. 3rd and 4th, the subjects dealt with will refer particularly to conditions in the prairie provinces and will embrace: tree planting on the eastern and western sections of the prairies, forest reserves, game protection, growing wood for fuel and for windbreaks, the relation of forests to the conservation of moisture, etc.

The Lieut.-Governor has kindly consented to open the meeting and representatives of the provincial government, the city of Regina and the Board of Trade will welcome the delegates and take part in the discussions. Among those who will read papers are: Mr. Angus MacKay, Superintendent of the Dominion Experimental Farm, Indian Head; Mr. Norman M. Ross, Chief of the Tree Planting Division; Mr. J. P. Turner, secretary Manitoba Fish and Game Protection Association; Mr. A. Knechtel, Inspector Dominion Forest and Game Reserves; Mr. A. H. D. Ross, M.A., M.F., lecturer in Forestry, University of Toronto; Mr. A. Mitchell, assistant, Tree Planting Division; Mr. T. N. Willing, Chief Game Guardian, Saskatchewan.

It is expected that the following, among others, will be present to take part in the discussions: Dr. William Saunders, Director of Experimental Farms, Ottawa; Senator T. O. Davis, Prince Albert; Mr. R. H. Campbell, Superintendent of Forestry, Ottawa; Mr. C. E. E. Ussher, assistant traffic passenger manager, C.P.R.; Mr. Geo. H. Shaw, traffic manager C.N.R.; Mr. J. B. Whitman, Bridgetown, N.S.; Mr. J. N. Bayne, Dep. Municipal Comr., Regina, and a number of representatives of the governmental, lumbering, farming, transportation, commercial and professional interests in all parts of Canada. Some United States forestry experts are also expected. The railway companies have granted a single fare for this meeting, regardless of the number in attendance.

Wm. E. Barrett, of Chicago, recently stated in an interview that the lumbermen of the United States Inland Empire had nothing to fear from Canadian timber, because Canada would not have timber enough for home consumption. This would be encouraging to lumbermen on both sides of the boundary, but it seems a little odd, in view of the fact that Mr. Barrett had just been over to Cranbrook, B.C., and left an order for fifty cars of Canadian lumber. With the duty on lumber reduced, there will be still greater inducement to Mr. Barrett and other United States lumbermen to get Canadian supplies.

Mr. F. D. Day, president of the Day Bros. Lumber Company, of New Orleans, was in Vancouver recently. Mr. Day says he is looking forward to the revival of the lumber business and that his company is contemplating the building of a mill on the coast.

Canadian Birch for Stave Making.

The Canadian Trade and Commerce reports state that Canadian birch may replace oak for stave making. Some experiments have been made by Canadian firms with birch wood in the manufacture of puncheon staves with apparently some success. On inquiry at Barbados as to the relative value of oak and birch for staves, it is found that birch will answer the requirements. As the price at which this stave can be placed on the market from Canada is lower than oak staves from the United States, and as the trade is quite large, it would justify a serious effort being made to perfect the birch stave in Canada, so that it may be equal to the oak stave, which can, no doubt, be easily done. Maple might also be tried.

Staves come in bundles of about thirty, sufficient in width to make one hogshead. They are about 44 inches in length, and from $2\frac{1}{4}$ to $4\frac{1}{2}$ inches in width, and are cut square at the ends. The stock is a full inch in thickness. The hogshead contains about 36 superficial feet of lumber in its sides. The ends of both puncheons and hogsheads are made from pine and spruce. The puncheon head is 28 inches in diameter, and the hogshead 36 inches. Neither the staves nor the head require to be kiln dried, but should be weather dried for a short time. Generally the stave is slightly bent in manufacture, but this is not essential as it can be done here just as well. Any firm, however, intending to go extensively into the manufacture of staves, should put in a machine for bending the wood.

Lumber Trade of the West Indies.

The lumber trade of the British West Indies, British Guiana and Bermuda, as shown in the latest customs returns, amounted to £561,624. The imports were valued at £421,922, and the exports at £139,702. Shingles, hoops and shooks and staves, puncheons and casks were included under this head. Of spruce, white pine and hemlock, the importation from Canada was greater than from the United States by £12,789; the amounts from each country being £41,931 and £29,142 respectively.

Under the additional head of lumber without classification, the imports from the United States, however, were greater than from Canada, the figures being for the United States, £37,273, and for Canada £9,900. All the importation of pitch pine, amounting to £114,375, was from the Southern States of America and was the largest item of the wood import.

Puncheon and puncheon staves, taken together, amount to about three-fourths, and shooks and empty boxes about one-fourth of the value of the staves, shooks, puncheons and casks. The United States and Canada supply these goods. Much the largest share of this trade goes to the United States. In the case of staves, it is due to the large amount of red and white oak still obtainable in that country, as staves are generally made of that wood. The amount imported from the United States amounts to £92,605, and from Canada, £6,823.

Quebec Cullers Report.

The following comparative statement of timber, masts, bowsprits, spars, staves, etc., measured and culled to date, has been issued from the Supervisor of Cullers' Office, Quebec, under date of July 7th:

	1907	1908	1909
	Cubic ft.	Cubic ft.	Cubic ft.
Waney white pine	546,360	551,160	583,000
White pine	74,040	96,040	51,240
Red pine	4,640	8,000	5,400
Oak	152,760	129,000	408,160
Elm	148,800	44,080	61,880
Ash	8,680	4,000	480
Birch and maple	63,680	59,880	45,080

The fifth annual picnic of the lumber dealers, contractors and carpenters of Hamilton, Ont., will be held on Saturday, Aug. 21, at Queen Victoria Park, Niagara Falls, Ont. This event has come to be looked forward to throughout the year with keen anticipation. Practically every representative of the three callings in the city attends the picnic and a splendid time is enjoyed. The free drawing for prizes will again be one of the chief features during the journey by train. Prizes aggregating \$50 in value will be given to the fortunate winners.

The Long Lumber Company, of Hamilton, Ont., have secured the contract for supplying lumber for the new T. C. Watkins dry goods building, known as "The Right House," at Hamilton, Ont. The Bishopric Construction Company, engineers and contractors, 19 Wellington street west, Toronto, have obtained the contract for construction of the building.

The city council of Toronto is considering the sale of a block of land on the west side of Perth avenue, just north of Bloor, to Mickle, Dymont & Son, of Barrie. The price offered is \$7,250 and the block has a frontage of 375 feet on Perth avenue and is 125 feet deep.

The Forest Products of Canada.

By instruction from the Forestry Branch of the Department of the Interior, A. H. D. Ross, M.A., of Toronto University, recently issued a bulletin dealing with the forest products of Canada. In 1868 the exports of manufactured and unmanufactured products, according to this report, amounted to less than \$19,000,000, and last year they aggregated \$49,000,000. The United States, in 1868, took \$7,842,526 worth, and last year \$27,470,754 worth; in the same years Great Britain took \$9,354,244 and \$11,483,095 respectively. In manufactured wood products, such as pulpwood, the whole practically goes to the United States.

Mr. Ross discusses the need of more thorough gathering of information respecting the forestry resources of the Dominion. It was with this end in view that the Forestry Branch was started. The forest areas are among the greatest resources of the Dominion. In the census of 1891 the forest area of the Dominion was estimated at 799,000,000 acres. More recent estimates, says Mr. Ross, reduce the area to between 500,000,000 and 600,000,000 acres, but this will include areas of timber which is not at present merchantable, and for land covered with merchantable timber presently available estimates have been made as low as 200,000,000 acres, and even 100,000,000 acres. It is to be remembered, however, that these are estimates based upon deductions from a general knowledge of conditions or of special areas, and none of them are entitled to great reliability.

The stand of timber is even less known, but between five and six hundred billion feet of timber suitable for sawing would be a conservative estimate. In addition there are large areas suitable for pulpwood. The whole forest area of Canada has suffered so severely from fire that the average stand must be computed at a low figure.

A Common Source of Forest Fires.

The question has been asked why there should be so many fires in our American forests when there are so very few or none at all in the forests of Europe? The answer is this: When the trees are cut in the forests of Germany, France or Switzerland, the entire material in the tree is marketed and removed, leaving no inflammable litter on the ground. In our American forests, owing to lack of a market for such material, fully one-half of the tree—the limbs, smaller branches, twigs and foliage are left upon the ground, where they soon become dry and furnish material for a forest fire. In the European forests every part of the tree, including the smallest twigs, is sold. The sale of this minor product constitutes over one-half of the revenue. Hence, when the forester is through with his tree-cutting no inflammable material is left upon the ground. Now, if our Adirondack lumbermen could sell the limbs and tops of the trees instead of allowing them to go to waste for lack of a market, they would not be obliged to leave the ground encumbered with the inflammable debris and litter which is such a prolific source of fire, and which when ignited is so difficult to extinguish. A glance at any picture showing the parklike appearance of a German forest, and the mass of limbs and tops remaining in an American forest where lumbering has been done, will explain readily why disastrous fires are so apt to occur in this country.—From Forest Fires, by James S. Whipple, in the Outing Magazine for August.

McBean & Verrall, Toronto, report that they find the hardwood lumber business on the whole quiet. While greatly improved from last year's conditions, things are by no means normal. Consumers are still buying largely, mixed car loads for immediate use and special work, thus entailing a large amount of extra work on hardwood shippers. Dry stocks, however, are, on the whole, low, compared with former years, and should trade pick up this fall, hardwood lumber conditions will be greatly improved.

Enquiries from the United States are coming in freely, indicating an improvement over there. Export trade is only fair, with prices hardly high enough to offer much inducement for business in that direction. We notice of late, in the vicinity of Toronto, the demands are for higher grades of hardwood lumber than formerly, showing that a higher style of work is being done than in years past.

Gordon Grant & Company, Port-of-Spain, report under date of July 24 as follows: Lumber and cooperage materials—No further arrivals of pitch pine have taken place, and a well assorted cargo or two of good quality would command ready sale. There is a very limited outlet for spruce, hemlock, etc., but American and Canadian white pitch boards are saleable.

The First National Conservation Congress of the United States will be held in the Auditorium of the Alaska-Yukon-Pacific Exposition, Seattle, August 26, 27, 28. The convention has been called by the Washington Conservation Association, and has the official endorsement of the various State Conservation Commissions and of the joint committee between States and nation.

THE WOODWORKER

Designing and Grinding Shaper Moulding Cutters.

By Nap. J. Millette.

In modern practice, we find that it is next to impossible to produce duplicate shape mouldings without a proper gauge for testing the shape when grinding cutters.

The following is a practical method of designing and maintaining in same shape straight cutters, as commonly used on shapers, by which we can produce uniform mouldings without particular attention.

Fig. 1 represents shaper collar as set on machine. This is done to determine "working line" and "cutter line," which are of main importance in designing moulding knives.

Fig. 2 shows shape of moulding adapted for this treatise, designed at a right angle from working line, and at a given distance from the collar, to suit the operation.

Fig. 3 is a portion of the cutter, designed at a right angle with cutter line, laid out with all guiding points (as at fig. 2). All lines are traced, following the travel of the head from the working line to the cutter line,

to determine the length of cutter required, to produce the shape of moulding, at intermediate points.

Fig. 4 is a sketch of the most important part of this treatise, "the gauge," which is made in such a way that the same shape moulding tests both right and left cutters. In this way both cutters are bound to be the same, as long as the gauge is made square. The part of the gauge, intended to guide the cutter is reduced on both sides, forming a shoulder so as to guide the cutter on either side, as stated. Dotted lines on the sketch of the gauge show the position of the cutter when testing, which is brought close to the shape, resting along the side.

Fig. 5 represents a shaper cutter as made following this process, intended to produce moulding as shown in fig. 2.

Gauges and cutters should be distinctly marked or numbered, well placed to prevent them from damage, and to enable them to be quickly found when needed. This avoids much delay and reduces the chances of misunderstanding. The man who looks after a system for the saving of tools and labor will find in the practice of these few points a great saving, especially when he sets up machines for a small quantity of accurate work at a time.

A recent writer in one of the popular weeklies, on the subject of educating employers in economy, assumes that there are only a few hand saws in use in the very best mills and that the general practice today is to cut a kerf $\frac{3}{8}$ -inch. In other words, that $\frac{3}{8}$ -inch is wasted in sawdust for every 1-inch board made. This is probably about 50% exaggeration. It would be interesting to know what is the average saw kerf.

Stave Manufacturing Costs.

At the eleventh annual meeting of the National Slack Cooperage Stock Manufacturers' Association, one of the most interesting events was the delivery of an illustrated talk on "Cost," by Mr. J. J. Innes, of the Sutherland-Innes Company, Chatham, Ont. Mr. Innes said:

On account of the great divergence of opinion as to the cost of manufacturing staves, your president and secretary have asked me to give you my own experience in the cost, and I will endeavor to do this, from actual data at our own mills.

It has often been said that half of the manufacturers do not know what it costs to manufacture staves. I don't think this can be correct, but I do know that a great many manufacturers with whom I am acquainted very often run a good many side lines along with their manufacture of staves, and do not keep their cost separate, consequently, cannot tell for certain which is the profitable part of their business.

Nowadays, more especially in the north, there are very few stave mills run exclusively on staves. Most of the mills where they have good

elm timber manufacture staves and hoops. However, I will first take a stave mill running exclusively on staves in the most economical way, and will afterwards refer to mills where we manufacture both staves and hoops.

The actual expenses in running a stave mill exclusively on staves are as follows:

Team and extra man ..	\$5.50 per day	Cull Carrier	\$1.50 per day
Drag saw	2.00 "	Horse and driver	2.00 "
Tail sawyer	2.00 "	Pilers	4.00 "
Bolter	2.50 "	Day fireman	2.00 "
Canter	1.75 "	Night fireman	2.00 "
Box fillers	3.75 "	Watchman	1.50 "
Box pullers	3.80 "	Yard man	1.75 "
Equalizer	1.75 "	Foreman	3.50 "
Cutter	3.50 "		
Culler	2.00 "		
Loader	1.50 "		
		Total	\$48.30 "

Now, figuring the output of 40,000 staves, which a good mill should do on an average, and not taking any extra men into consideration, the cost should run about as follows:

Labor	\$1.21 per 1,000	Operating expenses ...	\$ 50 per 1,000
Jointing	55 "	Repairs	12 "
Loading	10 "	Office expense	25 "
Re-handling	10 "	Insurance	12 "

making the total cost of the staves, f.o.b. cars, for manufacturing, \$2.95 per 1,000. In actual practice, however, the cost will exceed this, as there are certain seasons of the year when the mills are not running, and when there are certain amounts of overhead expenses which are always in-

curred, and very often there is re-piling, re-packing and other work to do where the staves are damaged, so that \$3 is as cheap as the staves can be produced with a one-knife mill. With a two-knife mill, the cost of production can be run down from 25 cents to 50 cents per 1,000, according to the way that the mill is laid out, and the number of extra hands which are required.

I have also taken the output of two of our mills for the year 1908, and the actual cost of production is as follows: At one mill we produced 9,140,600 staves, and 4,846,610 hoops. I have separated the labor and expense as near as possible in the cost of production of each, and our figures are as follows:

Staves		Hoops	
Labor	\$1.98½ per 1,000	Labor	\$1.41⅓ per 1,000
Operating expense ..	69¼ "	Operating expense ..	49¾ "
Overhead expense ..	50 "	Overhead expense ..	35¾ "
Total	\$3.18¼ "	Total	\$2.26¾ "

At another mill in the same district our expenses were as follows, on a production of 5,781,970 staves and 2,409,180 hoops:

Staves		Hoops	
Labor	\$2.00½ per 1,000	Labor	\$1.60⅓ per 1,000
Operating expense ..	44¼ "	Overhead expense ..	35 "
Overhead expense ..	43¼ "	Operating expense ..	34¾ "
Total	\$2.88½ "	Total	\$2.30 "

The above two mills are United States mills in Michigan. I will now come to our Canadian mills.

At one of our mills, on account of it having been run for a number of years, the timber is not of a very high quality, as far as the proportion of hoop timber is concerned, and last year especially we did not get in as much hoop timber as usual; we were unable to keep our cost of staves and hoops separate, as our hoop gang ran part of their time on staves and part of their time on hoops, this mill being equipped with two stave knives and hoop knife, so that when the hoop gang cannot get sufficient work on hoops we change them off on to staves.

This mill produced 11,062,500 pieces of staves and hoops, the cost of production being as follows:

Labor	\$2.00 per thousand
Operating expense ..	60 "
Repairs	11 "
Office expense	16 "
Insurance	12 "
Total	\$2.90 "

for both staves and hoops, this being the cost of the stock, f.o.b. cars.

At another of our Canadian mills, where we manufacture staves and hoops, running one stave knife and one hoop knife, but where it is impossible to keep the cost of the staves and hoops separate to a nicety, our cost of manufacture was as follows:

Labor	\$2.00 per thousand
Expense	35 "
Sundries	8 "
Total	\$2.99 "

We manufacture at this mill, roughly speaking, two-third staves and one-third hoops. Figuring roughly, it cost us at this mill \$3 to put the staves on the cars and \$1.75 per 1,000 to put the hoops, while we produced 3,500 pieces on an average, staves and hoops to 1,000 feet of logs, but, on account of the logs going through the mill together, and sometimes part of the log being fit for hoops and part for staves, it would only be possible to approximate the out-turn per 1,000 feet separately.

You will notice in the above an item of 11 cents per 1,000 for repairs; in the other mills our "repairs" were charged to expense account, but in this case the repairs ran high, as there had to be new hoop vats put in and some foundations repaired, and I kept the repairs separate, which amounted to \$1,230, or 11 cents per 1,000 on the production. As every mill realizes, every year there are some repairs, about every three or four years there is a general overhauling to be done, which usually amounts to from 5-10 per cent. of the original cost of the mill, and this must be taken into account on the cost of production.

After careful figuring and on the experience I have had, it is never safe to figure less than \$3 per 1,000 as the cost of manufacturing staves, and \$2.50 per 1,000 to manufacture hoops, even under the most advantageous circumstances, and a mill man is safer if he figures \$3.50 for staves and \$3 for hoops, which keeps him on the safe side.

I have not taken into account at all the interest on the investment, as this is a matter which has to be figured in the profits, but have simply gone into the cost of manufacture, and in every case I am giving you actual experience, and not simply "paper figures," but where we have paid the money out to the men for their work.

It has also been suggested to me that I say something with regard to the production from 1,000 feet of logs. This, however, is a very difficult thing. Our experience in Canada has been, that on an average we produce 3,300 staves and 4,500 hoops from 1,000 feet of logs; a great deal depends, however, on the quality of the logs, as far as the hoop

production is concerned, and on the size of the logs as far as the stave production is concerned.

At one of our mills, the results of which I have now before me, our actual production was 3,300 staves to 1,000 feet, as near as it is possible to figure it. At another mill we produced in elm staves 3,552 staves per 1,000 feet; in hardwood, 3,747 staves per 1,000 feet, and 5,136 hoops per 1,000 feet. At another mill we produced 4,077 elm staves per 1,000 feet and 5,202 hoops per 1,000 feet. It must, however, be taken into consideration that quite a considerable amount of the staves and hoops in these two latter cases were "shorts;" in other words, keg hoops and staves 18 to 24 inches long made from cut-offs, and which do not bring in very much more than the cost of their manufacture. I therefore contend it is not safe for any manufacturer to figure over 3,300 staves to 1,000 feet of logs; if he overruns this, so much the better, but this is a safe figure to go on, on an ordinary run of logs.

At our Canadian mills, in estimating the production, we do not figure the shorts at all, except where we cut 24-inch staves from the log. Our cut-offs, which run from 2,000 to 3,000 staves per day, we figure if we get an average of \$3.50 out of them we are reducing the cost of our other staves to some extent, but we do not count them in our total of the production.

Manufacture of Small Dimension Stock.

There is no branch of the woodworking industry that has had more ups and downs and witnessed more discouraging experiences, probably, than that of manufacturing small dimension stock; and yet it continues persistently to tempt people, says the St. Louis "Lumberman." There is no doubt but it should continue to tempt people, too, because there is much good material goes to waste that could be worked up into small dimension stock to good advantage, and there is nothing wrong with men being continually tempted to experiment with the idea until a successful outcome is found. The wrong, or the error rather, is not in the idea of utilizing the waste itself, but is in the method resorted to to carry out the idea. The most common error is that of too elaborate equipment, and comes from the pursuit of the natural but erroneous notion that small dimension stock can only be successfully manufactured by practically automatic handling.

It has been demonstrated so often that every well-informed mill man should know by this time that automatic handling calls for enormous quantities of material, in the first place, and quite frequently necessitates this material being clear stock. Every now and then a man is met with who has experimented with very expensive machines, each of which has some separate appliance for handling small dimension stock, and he finds in the end he can get better results—more for his money—with two or three boys and a couple of plain rip saws. This is not always the case, neither is it an argument in toto against automatic machinery. That sort of machinery has other uses, and is important in the scheme of mechanics, but when it comes to making small dimension stock, especially out of scrap material from around the sawmill, a few simple machines in the way of rip saws and cross-cuts and a few men at work who know their business, and who use their brains as well as their hands, are worth more than the complicated and expensive machines. One reason for this is that scrap stock can be had only in limited quantities for these small dimensions, and each piece must usually be given individual treatment, which it can get with a good man in charge who knows that it is himself and not the machine that must be depended on to get proper results.

The saving of scrap stock and converting it into small dimension stock suggests in some ways a sort of relation to chicken farming, in which waste material of various kinds about the place are used to feed the chickens and produce eggs. Men with sharp pencils and bright ideas have set down and figured what great returns, comparatively, farmers' wives are getting from their chickens, and from this they figure out on paper the possibilities of magnificent results to be obtained from going into the poultry farming business on a large scale and in a scientific manner. The results of such undertakings have been the subject of jokes in the funny papers for years, and need not be related in detail; but the moral may be cited, which is that certain things have limitations in the way of extension and manipulation. Herding too many chickens together breeds cholera, and working too much stock together breeds confusion, both of which are accompanied with financial disaster.

In short, the plain road to success right now in the small dimension stock business is through each man making a small business of it, just as farmers' wives make chickens and eggs an incidental business and get a very good thing out of a limited number of chickens, the aggregate of which amounts to an enormous figure. The farmers' wives can tend to a few chickens and be comparatively free from cholera epidemics and things of that kind, and the average mill man can give a modicum of attention to the small dimension stock business and realize therefrom a fair share of profit.

The best way to habit boxes without trouble is, first know how to do the work. Have the proper appliances with which to do it, and then go about it as if you enjoyed it, and not as if it were a troublesome job, and the trouble bird will not likely appear.

Lumber Matters in the Law Courts

Lien for Sawing Lumber which has been Burned—Liability for Trespass on Limits

Lien Upon Burned Lumber.—In the case of *Chew v. the Traders Bank of Canada*, which recently came up in the Court of Appeal, the court upheld the appeal with costs. The original claim was for payment on a contract for sawing lumber for Caswell & Company, agents for the defendants, and also for a lien upon the lumber for the price of the sawing, which lien, plaintiff held, he should be entitled to enforce against the insurance moneys paid into court in satisfaction of claims under the policies of insurance upon the loss of the lumber by fire. The agreement for the sawing was made between the plaintiff, a saw miller, and Caswell & Company, lumbermen, the owners of the logs. The defendants, the Traders Bank, were not mentioned in the written agreement and accordingly the first claim was held not to have been established. The appeal in connection with the second branch of the claim was taken by the Traders Bank against Judge Riddell's decision to the effect that the lien claimed upon the insurance moneys was valid. Judge Riddell had held that the insurance was upon the lumber, and covered the interest of all who had an insurable interest. He was unable to see that the circumstances that the money was made payable to the bank made any difference. The Court of Appeal in reversing this decision and allowing the bank's appeal said that what the plaintiff had at most was a mere possessory lien for the price of the sawing, depending not upon the contract, but wholly upon possession, and therefore brought to an end by the fire.

Trespass and Cutting Logs on Plaintiff's Property.—Judge Mathers has given judgment in the case of *Law v. Madden* in a Manitoba Trial Court, holding the defendant, James A. Madden, liable for trespass. The plaintiff alleged that defendant's employee's trespassed on his land, in cutting logs for the defendant. The defendant's employees did not know they were trespassing until after a survey was made. Damages to the extent of \$250 and costs were given.

A settlement has been arrived at between the Rainy River Lumber Company and Mr. Wm. Quimby, for the death of Mr. Quimby. The company agreed to pay \$1,000, of which the widow is to receive \$300 and the balance is to be paid into court to the credit of three children. Quimby met his death as the result of an accident while in the employ of the company.

Janwick Trepanier has instituted an action against the Haskell Lumber Company for \$9,600 damages, on account of injuries received while working on a logging railway for the company. He was caught between two cars. One of his legs has been paralyzed since the accident and the other is permanently injured.

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

973. Flooring boards—A Manchester firm asks for prices and dimensions of flooring boards from Canadian exporters.

974. Birch logs—A Manchester firm wishes to correspond with Canadian exporters of birch logs.

977. Pine lumber—A Cheshire firm wishes to correspond with Canadian exporters of pine lumber.

978. Spruce deals—A Manchester firm asks for prices and dimensions of spruce deals from Canadian shippers.

990. Agents—A Sheffield manufacturer of cast and shear steel, files, saws, edge tools, etc., is desirous of appointing agents in Nova Scotia and Newfoundland.

991. Leather belting—A firm in the Midlands of England, manufacturing leather belting, wishes to increase business connections in Canada.

1000. Wood boxes—A South African fruit packer asks for quotations from exporters of wood boxes as per specification: (1) 18-inch x 12-inch x 3½-inch; (2) 18-inch x 12-inch x 5-inch; (3) 10-inch x 11-inch x 20-inch. Of No. 1, about 2,000 will be required; of No. 2, 1,500, and of No. 3, 1,600.

1024. Paper—A Newfoundland daily newspaper is open to purchase five carloads of paper annually in rolls 54¾ inches wide.

1033. Butter and cheese boxes—A South African firm of general merchants asks for quotations from exporters of butter and cheese boxes, and sample of wood.

1034. Fruit boxes—A South African fruit packer asks for quotations for fruit boxes, as per specifications, sent upon request, to Department of Trade and Commerce.

1036. Wood boxes—A South African fruit packer asks for quotations for wood boxes, as per specifications. Quotations to be c.i.f. Durban. Dimensions: (1) 26½ inches by 26½ inches by 6 inches; (2) 26½

inches by 26½ inches by 7 inches; (3) 26½ inches by 26½ inches by 8 inches. To be made of ¾-inch wood.

1037. Butter boxes—A South African dairy company asks for quotations for butter boxes.

1069. Wood ties—A firm of general woodenware importers are open to buy large or small parcels of wood ties 48-inch x 1¼ x 1⅝ in bundles of 36 pieces, made from white pine, basswood, spruce or any clean bright firwood. Shipments to Newcastle-on-Tyne.

1096. Poplar, pine, deals, doors—A South African firm of timber merchants asks for quotations from exporters of poplar, pine, deals, averaging 16 feet to 17 feet; doors. Shipments should be guaranteed up to specifications. Quotations to be c.i.f. Durban.

1105. Timber—A South African firm of timber merchants asks for quotations from exporters of all descriptions of timber. Quotations to be c.i.f. Durban and Delagoa Bay.

1121. Canadian spruce—A north country firm of timber importers who are interested in Canadian spruce, would be pleased to receive quotations from Canadian shippers.

The New Zealand Timber Enquiry.

The Timber Commission, appointed by the Government of New Zealand to take evidence upon the suitability of increasing the duty upon imported timber, is still continuing its labors. At a session held in Auckland recently the chief timber expert gave the quantities of milling timber remaining on Crown lands, State forests and forest reserves, and private and native lands, at March 31, 1909, as follows:

Timber	Crown Lands	Private and Native Lands
Kauri	209,627,889	275,819,100
Rimu	909,422,310	2,964,082,710
Kahikatea	109,497,863	574,028,890
Matai	103,435,579	796,630,105
Totara	90,889,203	59,065,180
Miscellaneous	3,000,300	129,614,728
Totals.....	1,425,873,144	4,799,240,713
Grand total		6,225,113,857

The evidence taken is, of course, very contradictory, architects and builders being opposed to an increase in duty, while the small sawmill men urge the necessity of it. The reaction in the trade of New Zealand, which has largely stopped building operations in the cities, is partly responsible for the closing of the mills that have gone into liquidation. In view of the evidence of the timber expert, it will make very little difference whether an increased duty is placed upon the importation of Oregon or not save for a year or two, as the prices certainly will advance in proportion to the increase of duties. The only rivals of Oregon are Kauri and Rimu, and of the Rimu but a very small proportion, not much more at the outside than one-sixth, of the timber is heart timber, which can in any way compare in quality with Oregon; the balance of the cut being inferior timber.

Personal Mention.

J. P. Reardon, secretary and treasurer of the McGoldrick Lumber Company, Spokane, and Mrs. Reardon visited Victoria and Vancouver recently.

Mr. E. A. Thornton, of the E. A. Thornton Lumber Company, with offices in the Chamber of Commerce building, Chicago, recently took a trip to the Georgian bay district, Duluth and Minneapolis.

The following party visited Vancouver, B.C., recently: Thos. S. Shevlin and H. C. Clark, of the Shevlin-Carpenter Lumber Company, Minneapolis; B. F. Nelson, of the Nelson Lumber Company, Minneapolis; Dr. D. F. Brooks and M. J. Scanlon, of the Brooks-Scanlon Lumber Company, Minneapolis; E. D. Keys, M.D., J. A. Nichol and J. R. Randall, of Minneapolis. They were in Vancouver to look after their own lumber interests and to consider the extension of their lumbering operations in British Columbia. Mr. B. F. Nelson is particularly interested in pulp manufacture and looked over the ground with a view of establishing a pulp works on the coast.

R. E. Edwards, of Peru, Ind., has by purchase succeeded to the interest of John M. Thompson in the Wolverine Cedar & Lumber Company, of Menominee, Mich. Mr. Thompson has resigned the general management of the Wolverine Company and his duties have been assumed by Mr. Edwards, who has for some time been connected in executive capacity, with the company. The Wolverine Company was started in 1900 at Northland, Mich., by Mr. Thompson, and it has grown to large proportions, with mills at Northland and Little Current, Ont. With the completion of the details Mr. Thompson will take a well earned vacation, but will return later to active connection with the lumber business. He will remain a resident of Menominee and will retain his interests in the White Pine Lumber Company, operating extensively in the Spanish river district in Canada.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

An Improved Hot Blast Grate.

The E. Long Manufacturing Company, Limited, of Orillia, Ont., have secured the exclusive right for manufacturing in Ontario, Quebec and the Maritime Provinces, the Improved Hot Blast Grate, which is widely known in the United States, being made there by the Hanchett Hot Blast Grate Company, of Big Rapids, Mich. The Orillia firm have a reputation for making a success of anything they undertake, and the fact that they are now interested in this grate would indicate that it will in the near future have a big market in this country. It is claimed, on behalf of the Improved Hot Blast Grate, that it is exceedingly simple. No change is required in the brick work of a furnace to put in a grate and it can be used in either furnaces or ovens. Some of the advantages that are given for this grate are as follows:

The blast openings are distributed in four rows lengthwise along each blast bar. The blast from the outside rows is converging, while that from the inside rows is diverging. In addition to the blast from these rows of opening, another blast is delivered forward from the tuyeres next to the bridge wall. This forward blast plays an important part and is one of the distinctive features. Whereas, in the case of an ordinary grate, the draft has a natural tendency to take the gases and

Improved Hot Blast Grate for Mill Furnace.

smoke away from the fire up through the smoke stack too quickly for them to be properly consumed, this blast from the tuyeres next to the bridge wall forces back the gases over the fire and supplies oxygen for their thorough combustion.

Planing Machines—Their Proper Care.

The care of planers is materially simplified in some of the modern machines and the burden of details made considerably lighter. This is particularly true of knife-setting. In some of the late machines the setting of the knives is a mighty simple problem compared to the setting of knives on the old-time machines, a problem that any man versed in mechanics can work out easily. As everybody is not provided with the most modern type, with these facilities for setting knives, however, the subject is still one of important details that need attention. And this brings us to a subject that has been elaborated on frequently by the writer, that the proper care of planers, to give good work, is in careful attention to small details. In other words, that it is not lack of skilled help, nor ignorance, so much as lack of attention to details, that makes poor work in the planing mill.

We hear every once in a while complaint of lack of competent help, and there may be lack of what we term efficient help, but it is not a lack of knowledge so much as a lack of application and diligence. A lack of competent help might originally reduce the quantity of work turned out, but it should not continuously keep down the quality. This may look like a new position to take in the matter, but it can be maintained with reasonably good logic, and just to show how, let us consider a case or two. Let us turn first to a car of flooring on which there has been a complaint made and a reduction asked.

Upon examination, this car of stock is found to be poorly matched so that it will not lay evenly. "Incompetent help," you may say. In-

competent fiddlesticks! It is nothing but downright carelessness and neglect. Any man who has sense enough to set up a machine to dress and match flooring, not only knows that this flooring should match up and lay smoothly, but he has at hand, all the time, means of determining whether or not it will, and is fully competent to test the matter and make it right. You might argue with me on this point until doomsday, and I will argue that it is nothing but neglect. It does not require much skill to take a board as it comes from the planer, cut a few short pieces off it, match them together, and see whether or not they will lay smoothly; and it does not require any more skill to adjust a matcher head up and down than it does to grind the cutters and put them on the machine. It is not lack of skill at all, but lack of attention. It cannot be explained on any other theory, and there is no excuse for work of this kind being permitted to leave the mill.

Even if the planer man hasn't the time or inclination to do it, the office boy, shipping clerk, or anybody else about the place could test the stock in a few minutes and find out whether or not it will lie smoothly. Instead of that, however, time after time, day after day, stock that is poorly matched is let go through our planing mills, is loaded into the cars, and no attention paid to it until some yard man sells it to a contractor and the contractor goes to lay it in the floor, and then there is trouble and cost in the way of claims for reduction, that amount to more than the original cost of working the lumber in the planing mill.

What's the use to suggest a mechanical remedy in a case of this kind? What is needed is for the active manager of the mill to some way give a little more attention to what is going on in the plant, right under his nose, so to speak; to set an example of giving specific attention to the details, instead of neglecting them. You will then find fewer complaints to adjust, and he will have more time on his hands to attend to these things.—The Woodworker.

Lidgerwood Machines Increasing in the Canadian Field.

The use of steam in logging is of recent introduction in Canada. The "Alligator" and Lombard sleigh hauler have become quite well known where they are suitable, but the various skidding, re-yarding and loading machines so rapidly becoming a necessary part of the equipment of most American companies, are almost unknown to Canadian operators.

The Lidgerwood Manufacturing Company, of New York, one of the largest builders of many types of logging machinery and the patentees of the cableway or overhead skidding method, the method primarily suited to rough ground conditions, has recognized the tremendous field for this and for their other devices in Canada, and to more fully follow up the initial installations of these equipments made last year will have a special representative in Canada.

Mr. Asa S. Williams, this representative, is already known to many of the Canadian lumbermen, having long been a member of the Canadian Forestry Association and editor of the "Forestry Quarterly," which is widely read by all interested in timber; and through his former connection as forest engineer with the Berlin Mills Company, large operators in Quebec and Nova Scotia.

The policy of the Lidgerwood Manufacturing Company in the United States, to examine all timber holdings free of charge, direct or indirect, and to report just what can or cannot be accomplished with the new steam methods, will also be followed in Canada. Further, with the several plants now in operation in the provinces and possible for the interested operator to visit, it will be easy to determine the possibilities of these improved power devices.

A minister in Greenville, Michigan, where the Gordon Hollow Blast Grate and the Tower line of edgers and trimmers are made, was recently preaching at a funeral. His subject was, "The Resurrection," and his discourse was of considerably more than the ordinary length. Finally the undertaker commenced to show symptoms of uneasiness, glancing frequently at his watch and muttering to himself.

"What's the matter?" inquired a man who sat near him. "Don't you like the sermon? Or perhaps you don't believe in the Resurrection?"

"Oh, yes," answered the undertaker, "I like the sermon well enough, and I believe in the Resurrection, all right, but if he don't hurry up, I'm afraid I won't get the man buried in time."

Exports from St. John to United States ports for the half year were valued at \$1,776,109, as compared with \$914,034 for the same period last year. The chief increase was in lumber.

CAMP DEPARTMENT

Sanitation of the Logging Camp.

At the recent Pacific Logging Congress at Seattle a paper which proved very interesting was read by Dr. W. C. Belt, of Troutdale, Ore., on "Sanitation of the Logging Camp." Mr. Troutdale said:

Sanitation pays. It pays in cold-blooded dollars and cents, and will return to you 25 per cent. a month on the investment. It pays in the increased working efficiency of your men. It pays by attracting to your camps steadier and more skilled workmen and keeping them there. It takes the grouch out of the men.

Regarding man merely as a machine, with, say, a maximum working capacity of 100, statistics gathered throughout the whole United States show the loss to industry from preventable sickness and lowered vitality through unsanitary surroundings, insufficient and improper food, to be 40 per cent.

Apply these statistics to your own affairs, and eliminating all the totally sick, whom you do not have to pay, you are still getting less than 75 per cent. maximum working efficiency out of your men. Figure it out for yourself; there is a loss of 25 per cent., one-quarter of your monthly payroll.

Sources and Prevention of Typhus.

Typhus and typhoid fevers are most to be guarded against in camp life, but they can be entirely eliminated by a few sanitary precautions. The germs that infest the bowels of men and animals are conveyed through the soil to water, which they contaminate. Therefore, the first requisite is pure water. Running water piped from a hill is the best, and see to it that neither men nor animals can pollute the soil about its source.

A simple test that shows the presence of organic pollution is to take a bottle and add a few crystals of permanganate of potash until it produces a bluish purple tone; allow this to stand for a few hours and if the solution turns brown the water is not fit for drinking purposes. If you then have any doubts about the water you can send it to your State Board of Health for analysis.

I have not had a case of typhoid fever in my railroad camps during the last three years, and in a typhoid country; yet the water was tested by the rough and ready permanganate solution. If you have to use wells get as high ground as possible, even if you have to go a little deeper, and see that no drainage from toilet, barn or kitchen can reach it. The milk supply may be a source of typhoid fever, but as the majority of camps use condensed milk I think there is little danger from that source.

If you do not drink the germs of typhoid, you may eat them — flies carrying them from unmentionable places on their feet, to your bread and butter or other foods. So, screen your food, and while you are about it screen your dining-room.

Beware of the fly. As flies breed in manure, have your manure put in trenches and covered with crude oil or crude carbolic in water solution every day. Bury or burn all kitchen scraps daily.

If it is not practical to build a septic tank, the closets should be at least 100 feet from a dwelling or water supply and sprinkled every few days with chloride of lime or blue stone. However, if you have running water and the camp is permanent, it should be practical to install a septic tank. This is not expensive. The theory of the septic tank is briefly this:

There are two classes of germs: those that love darkness rather than light; and those that love light—or as we call them, anaerobic and aerobic. The first live without air or oxygen, the latter class requires air or oxygen. In order to arouse the cannibal instincts of the germs, the contents of the toilets are washed in a tank buried under ground away from light and air, where the anaerobic germs multiply so fast they form a scum or mould on top; they also lignify and destroy all the solids, including other germs. The tank may be made of wood—cement is the best—brick or that it is watertight and airtight. The inlet from the toilet should be near the bottom and a board or other resistance should be inserted so the iron, and can be of varying shape or size. The only requirements are current will disturb the scum on top as little as possible; the outlet should be on the opposite side high up, and should be carried by drain pipes some fifty feet to empty in a convenient stream or lose its contents in the soil.

Food Supply.

The filthy habit of some Chinese and other gardeners of sprinkling solutions of manure upon their growing vegetables makes it imperative that the outer leaves of cabbage, lettuce, etc., should be discarded and all vegetables carefully washed.

The adulteration and sophistication of food has reached such alarming proportions that the Federal Government has intervened. Therefore it is better in selecting your meats and other staple foods to buy those products that are handled in interstate commerce, thus subjecting them to Government inspection.

Tainted foods are a common cause of camp diarrhoeas and dysentery. It is better that the cook destroy a few leaves of cabbage or a few pounds of meat than that the camp be prostrated with dysentery.

Cooking and Ventilation.

Get a good cook, one with common horse sense. Upon him largely depends the health of your camp. Let him inspect the food with the senses God has given him—by sight, by smell, by taste. Let him understand you are not employing him for his ability to disguise and sophisticate tainted food, but to give your men good, substantial, clean, healthful, food. See that he is clean and has all kitchen refuse destroyed by burning or burying every day. Bury the old tin cans.

Ventilate your bunkhouses. I know many of them have enough cracks to supply the necessary cubic feet of air; but a little more sunlight and a little less crowding, and the danger from spinal meningitis would be reduced to a minimum. Malaria is a disease not common on this north Pacific coast. As mosquitoes are known to be transmitters of malaria, if mosquitoes are frequent about your camp, mosquito netting on bunks and screens on bunk houses are required.

In regard to consumption, I would say no consumptive has any business around a logging camp. For his own sake he should not labor, as it will take all his physical energies to make for his own recovery. In the Milwaukee sanitarium we have 100 per cent. of cures in the first stages; 60 to 40 per cent. later. The consumptive should rest and eat—eat and rest—and breathe the pure outdoor air. The States are getting in line with free sanitariums for the consumptive. In a few years consumption will be one of the lost diseases. In the meantime don't keep a consumptive in your logging camp. Send him to a sanitarium where he has a good show for his life. Professor Norton, of Yale, has suggested to me that in the areas of logged-over lands you could do nothing better than donate or lease a part for tuberculosis patients.

Isolation of Sick.

Diphtheria, smallpox, measles, pneumonia, we often find in camp life, and unless the patient is promptly isolated the whole camp may become infected. Therefore it is strongly advised that each camp have an isolated house and any man sick with a fever should move his blankets out of the bunk house to the isolation house or tent for a few days, or until a physician can see him. In connection with this a small house, say 6 x 10, air-tight as possible, and with racks made of laths, should be provided, where blankets could be spread and disinfected with formaldehyde.

The only other practical suggestion I could make would be that it would be desirable that every man going to work should be examined by a physician and a clean bill of health made a requisite to employment; also that his blankets be fumigated.

Periodical Inspection of Camps.

This is an age of combination and many of the camps are protected by some so-called hospital association. But while you are giving your men sick benefits and death benefits, why not give them health benefits and a decent chance to live? Am I my brother's keeper? The answer of the age is "yes." The American Association for the Advancement of Science through its committee on national health has estimated that the loss to the nation through preventable illness and preventable death reaches the appalling total of \$5,000,000,000, not to mention the anguish and pain. A national society has been formed to induce the Federal Government to place all agencies working for national health under the supervision of a federal department. Health is the greatest asset of a nation. Sickness, aside from its paralyzing pall, reduces the purchasing power of the people \$1,500,000,000. I would bespeak your earnest co-operation toward the national health movement.

In the life history of the human race, from its cradle in central Asia, it reached its highest development in the north-west of Asia, in Palestine and Phœnicia. From Greece to Rome, from Rome to north-western Europe, the race has travelled always toward the setting sun. Now, from the rocky hills of New England and the savannas of the South, the white race has reached its final resting place upon this Pacific coast.

It is to this north-western country that physiographers look confidently forward to the greatest development of the human race. Let us seek to do all that we can. May our virtues blend harmonious in this coming race—our vices be forgot.

Before I say farewell, I would like to add a few words about welfare. Reciprocity is a law of nature. "You scratch my back and I'll scratch yours." Look after the interests of your men and they will look after your interests. Large corporations are realizing this fact and erecting club houses and gymnasiums for their employees. Some modification of this plan should be installed in every camp, if it is only putting in a bath and laundry. The Japanese army required that every soldier going into battle take a bath and put on clean underwear.

MISCELLANEOUS

Timber Limits For Sale

IN THE PROVINCE OF MANITOBA, 84 square miles of standing timber, adjoining Lake Winnipeg. These limits are comprised principally of Spruce and Tamarac suitable for marketable lumber, railway ties and poles. In connection with these will be sold a well equipped mill, steamer and two barges. For terms apply to

H. P. MACMAHON, Traders Bank Chambers, Winnipeg, Man. 17

SALE OF McCormick & Moore Timber Limits

The undersigned are instructed to sell by Public Auction, as one Parcel or separately to suit pur- chasers, at the Russell House, Ottawa, on

**September 30th, 1909,
at 2.30 p. m.**

the following Timber Limits situate in Block A, Upper Ottawa, Province of Quebec, viz:

Parcel 1. N. 1/2 Lot No. 8, Range 4, Block A, Upper Ottawa, Que., 25 square miles.

Parcel 2. S. 1/2 Lot No. 8, Range 4, Block A, Upper Ottawa, Que., 25 square miles.

These limits are surveyed and are easy of access— the Ottawa River and Branches traversing both limits.

Terms 10% of the purchase money to be paid down at the time of sale, and the balance in equal instal- ments at One (1), Three (3), and Six (6) months thereafter with interest at the rate of five per cent. per annum.

For further particulars and conditions of sale apply to The Royal Trust Company (Ottawa Branch) and to Code & Burritt, Solicitors, Carleton Chambers, Ottawa.

Dated this 7th day of July, A.D. 1909.

THE ROYAL TRUST COMPANY,
Trustees for Sale. 18

Sale of Timber and Tie Berths

NOTICE IS HEREBY GIVEN THAT CER- tain timber and tie berths situated in the Districts of Algoma, Sudbury, Thunder Bay, Kenora and Rainy River in the Province of Ontario will be offered sale by public tender on Wednesday the Fifteenth day of September next. For descrip- tions, plans and conditions of sale apply to the undersigned or to the Crown Timber Agents for the above Districts.

F. COCHRANE,
Minister-
Department of Lands, Forests and Mines,
Toronto, July 15th, 1909. 17

Limits for Sale

FOR SALE, 800 ACRES TIMBER LANDS IN Muskoka, mostly in Hemlock, convenient to railway. Apply Box 802, CANADA LUMBERMAN, Toronto. 17

Virgin Forests

GOVERNMENT RAILWAYS HAVE brought the vast northern timber tracts close to shipping facilities. The Pine and Pulp of the upper waters of the world famed Ottawa will be manufactured at Haileybury, on navigable Lake Temiskaming on account of competitive shipping facilities. Follow the timber northward, and buy and build while prices are right. Will supply in- formation, maps, etc. Address CYRIL T. YOUNG, Chairman Publicity Department, Board of Trade, Haileybury. 17

A QUANTITY OF PINE AND SPRUCE timber situated in the Mississauga Forest Reserve, in the District of Algoma, having been partially damaged by fire, tenders are hereby in- vited for the right to cut said timber. The timber is tributary to the Sable River and the west branch of the Spanish River, and lies north of Townships 125 and and 132, as shown on plan of the north shore of Lake Huron. Tenders will be received up to We nesday, the 15th day of September next. For descriptions, plans, particulars, etc., apply to the undersigned, or to the Crown Timber Agents at Sudbury and Webbwood.

F. COCHRANE,
Minister.

Department of Lands, Forests and Mines,
Toronto, Aug. 5, 1909.

Sale of Valuable Timber Limits

Andrew MacCormack Estate and Other Interests

Review of Current Trade Conditions

Ontario.

There is practically nothing of importance to report regarding the Ontario markets. Prices for all grades of white pine are unchanged and steady. The United States demand continues to be encouraging and the settlement of the tariff is expected to improve it somewhat. Hardwoods are rather dull. This is the dull season and the demand is lagging somewhat. Prices have been shaded accordingly. White ash is a trifle easier for 1-inch and 2-inch at \$55, but black ash is firmer at \$40. Birch is a bit lower at \$24 for 1-inch No. 1 common and better, and \$21 for log run. Basswood is also a bit lower at \$27 for 1-inch No. 1 common and better, and \$25 for log run. Soft elm, No. 1 common and better, 1-inch, and rock elm, No. 1 common and better, 1½-inch to 2-inch, are selling at \$27.50 and \$30 respectively. Soft maple is easier at \$25 for common and better 1½-inch to 3-inch. Oak is firmer. Red plain, 1sts and 2nds, 1-inch, are selling at \$53, 2-inch at \$55, 3-inch at \$60, and 4-inch at \$65. White oak is steady generally and plain 1sts and 2nds, 1-inch, are higher at \$54.

The demand for the lower grades of white pine from the United States has improved in the Ottawa valley. Large quantities of box lumber are in stock and the improvement is much welcomed. Prices for box lumber are firm around \$16 and \$17 per thousand. Higher grades are steady. Lath are improving in demand with prices firm at \$3.50 per thousand for No. 1 white pine, 1¾-inch x 4 feet. Mill run white pine is not so firm, selling at \$2.75.

Eastern Canada

There is quite an improvement in the trade for lath at St. John, both the price and the demand having increased. An increase in price was looked for, but not so early in the season. As a rule, an improvement in the demand for lath comes after the end of the hot weather, and accordingly the present improvement is looked upon as an indication of an active fall trade at higher prices.

St. John stocks of spruce lath are lower than is usual in August, on account of frequent and extensive shipments of dimension which have been in progress during the summer. There are about six and one-half millions of lath in stock at present, two-thirds of which are "dutiabie." The price for lath at present, at St. John, is from \$2.80 to \$2.85 per thousand for "dutiabie." The trade in spruce deals for New York is still dull, but improvement is looked for early in the autumn. St. John demand is only steady and stocks are light, amounting to from twelve to fourteen hundred thousand. American spruce deals are selling at from \$16 to \$16.50 on 3x6 and 3x8, and from \$20 to \$20.50 on 3x10 and 3x12.

The demand for eastern spruce at Boston has been moderately active during the past fortnight. A few of the retail buyers are showing some interest in the market, but so far they have not come up to the higher prices. For frames 9-inch and under the quotations are \$23 to \$24. Sellers of random are asking higher prices, but buyers are holding back and not buying large lots. There is a belief among some of the buyers that by the end of August prices will be a shade easier. The demand for spruce boards is quiet and prices are steady.

At New York, eastern spruce is in a little better demand but there is room for a good deal of improvement still. The yards are stocking slowly and cautiously, as there is a feeling that there will be an advance in prices before long. Shingles are offering freely at Boston but the demand is not large. Tariff conditions have led to free offerings of Canadian shingles. The settlement of the tariff is expected to stop this. Cedar extras have been selling in some cases at from \$3.50 to \$3.75, but the bulk of the sales have been at \$3.50 to \$3.65. Lath are not in active

demand at Boston though prices are gradually growing firmer. A better demand is looked for from now on, from other markets. The price asked for 1¾-inch is \$4, and for 1½-inch \$3.50 to \$3.60.

Great Britain

There have been no public auctions of late in London and the holiday season has been on, so that business has been somewhat of a broken nature. The strike among the mill hands in the Baltic is interfering with shipments and the whitewood market at London is feeling the effect, as these shipments have helped to supply the shortage of spruce. Yards are reported to be filling up their supplies, but reports do not indicate that they are getting rid of their new stocks freely. Liner arrivals at Bristol have been fairly large. The spruce deal market at Liverpool is unchanged. Some of the most important St. John shippers are already sold out for the season. There may probably be some large arrivals for Manchester in the early part of August, but as these have already been sold on c.i.f. terms they will not affect the market. At least, they should not do so, as this will be followed by a considerable diminution of arrivals until September and October. With regard to spot value of special sizes, they depend entirely upon what enquiries come to the retailers' hands and whether they can fill them or not.

The Canadian pine deal market is unchanged. There is no weakening in prices of pine goods of any quality or dimension, nor is there likely to be as long as the season of importation lasts and after they advance to winter prices.

At Manchester the arrivals have been heavy of late but the state of trade has not been correspondingly brisk. Large quantities of spruce have been bought to arrive. Stocks are very low. It is believed that this year's imports of spruce will not be so large as a year ago. At Glasgow business is rather quiet. Prices, however, are steady.

United States

The improvement which began some weeks ago in the lumber business generally throughout the United States is still continuing and promises to do so for some time. The railroads are continuing, and even increasing, their demand and the building situation is improving. The factory trade is at the highest point for the year and it is expected that soon the furniture men will be in the market also. The settlement of the tariff uncertainty will be a strong factor in assisting any improvement which manifests itself.

At Chicago there is an improvement in the demand for northern pine which is well justified by the recoveries in hemlock, yellow pine and fir. Shop lumber is in splendid demand and the supply of uppers, it is thought, will scarcely be sufficient for the winter and spring trade. Country yards are making their demands felt more strongly. Many of them are calling for immediate shipments, which is believed to indicate that their stocks are considerably broken. Box makers are asking for more lower grade stuff.

At Minneapolis the past fortnight has witnessed quite an improvement in the demand for northern pine. The fall buying has started about two weeks in advance of the regular time. Even low grade stocks are feeling the benefit of the improvement. No. 4 boards are being held up to \$13. Retail yards are replenishing their stocks before the crop movement. At New York the demand for northern pine is improving only slowly and prices are scarcely steady.

The demand for western woods at Chicago is improving and normal business is expected before long. No. 1 and No. 2 vertical grained flooring have been scarce at fair prices. Spruce finish in No. 2 and better and

bevelled siding are in excellent demand. Western pine is still strong at Chicago. Red cedar shingles are showing a tendency to advance at Chicago. In some quarters they are reported to have advanced ten cents. Clears, however, can be secured in Chicago at \$3.32 and stars at \$2.79. White cedar shingles are steady with no increase in demand. Lath are firm at Chicago. At Minneapolis shingles have advanced five cents. Wholesalers are asking \$3.19 for clears and \$2.68 for stars, on the 55-cent rate. Cooperage at Chicago continues quiet. Sales of barrels and tierces are not expected to improve until the fall. Staves are also expected to remain unchanged. Hemlock is reported to be recovering at Chicago, while hardwoods are in fair demand, but the orders are largely for small quantities for immediate delivery. At Minneapolis the fall activity in hardwood is already making itself apparent.

Market Correspondence

Ottawa Valley News—Improvement in Lath.

Ottawa, Aug. 11.—An improved demand for the lower grades of pine in the United States has quickened trade in the Ottawa valley. As box lumber is the chief sort in stock the prospective buoyancy in the market is welcomed. The new tariff reducing the customs on rough lumber from \$2 to \$1.25 per thousand is not regarded as the main reason for the increased inquiries. Manufacturers look upon the situation as decidedly favorable to the lumber trade in general. The price of box lumber is likely to remain firm around \$16 and \$17 a thousand. Mill owners have no fears about the higher grades of pine. The smaller manufacturers are the only ones showing a tendency to cut prices and they have not the supply to fill any large orders. Many of them are doing business with the co-operation of the users of lumber, who put themselves about just to use the sorts turned out of the small mills. A great deal of the local trade is furnished in this way. The price list at the big mills is firm, however, and variations are rare.

A betterment is noticed in the market for lath. The best stock is picked up fast. No. 1 white pine, 1 $\frac{3}{4}$ -inch by four feet, is now firm at \$3.50 per thousand. The 1 $\frac{1}{8}$ -inch lath ranks as 1 $\frac{1}{2}$, the only actual 1 $\frac{1}{2}$ -inch coming from Whitney. The mill run of white pine is not so firm as the first quality, \$2.75 being the ruling figure at present. The extensive building operations in Ottawa makes a demand for all varieties of lath and mills are turning them out at a wide range of prices and in many sizes. The chief buyers of shingles at present are the farmers in the Ottawa valley, who, encouraged by the outlook for good crops, are building extensively.

The last fortnight has witnessed an upward move in the freight charges on the Ottawa water routes. The Inland Seamen's Union carried lumber at \$2 per thousand in the early spring, but are now asking \$3. Most of the stock shipped lately by barges went at \$2.50 or \$2.75, an advance which counteracts the advantage in the modification of the tariff. The rates will hurt export of cheap lumber to the United States. This and several delays on the part of railways in not getting shipments of shingles into the United States in time to escape the new Customs of 50 cents a thousand, drew considerable attention to transportation problems recently.

J. R. Booth, E. B. Eddy Company and Shepard & Morse are sending away crews to the shanties in preparation for the winter's work. Owing to the extensive fires along the Montreal river, caused by mining, the Shepard & Morse Company has already a gang of 250 men on its limits. The wages so far are the same as last year and plans for the winter operations seem to be just about as extensive as a year ago.

While the terms of the new American tariff were well considered for some time the news that the measure had been actually signed and put into effect by the President brought relief to the Ottawa valley manufacturers in general, although some of the big mill owners do not count much on the effect the new conditions will have on the trade. Still shipments are going through easier now because buyers can no longer ask to have orders held back till the lower customs become effective. Lumbermen had not expected so prompt a finish to the long drawn out campaign, and there were consequently a considerable number of shipments sent away liable to the old tariff, but were admitted at the reduced rates. The extra rates on shingles, however, will offset a good deal of this gain.

For a long time J. R. Booth, who depends on United States consumption for about half his output of some 80,000,000 feet a year, found trade quiet though not backward. He figures on an impetus to business now, though no change in prices. His shingle and lath stock is pretty well sold up and the advance in tariff on these items on the other side can have little effect. The season's production on account of the high water and late start in the spring is going to be nearly 25 per cent. lower than last year, so that he can afford to let stock accumulate, even if the American sales decline under the higher tariff.

W. C. Edwards, who, as well as Mr. Booth, has extensive trade with both the English and American markets, states that the new tariff can

have no appreciable effect on the Canadian lumber trade. He bases this assumption on the fact that of approximately \$800,000,000 worth of lumber made in Canada each year only \$20,000,000 worth goes across the border. He admitted that the higher tariff against shingles and lath could not fail to operate slightly against the Canadian, but, as in the case of rough lumber, the limitation on the trade should keep Canadians from worrying. As to the effect on the local lumber industry in the last year on account of the unsettled state of the American tariff, Senator Edwards said:

"I think any setback to trade was more imaginary than real, though business was a little dull."

Mr. Peter Whelen, president of the Ottawa Board of Trade and local manager of Shepard & Morse Lumber Company, expressed pleasure at having the vexed tariff question ended.

"It is a surprise that the bill has gone through so quickly," he said to the "Canada Lumberman," "but it is good to have the agony over. When it is considered how sensitive the lumber business has been during the last year on account of the deliberations on the tariff, we can readily understand what advantage the settlement of the tariff will be. Buyers on the other side have been more conservative than they would otherwise be. The first benefit from the change will be to stimulate trade in low grades of pine, which are very plentiful in the Ottawa valley. Fortunately the upper grades are able to take care of themselves. Along with the settlement of the tariff we have at present the prospect of bumper crops, which should have a beneficial effect on all the trade."

The Hurdman & Elmitt Lumber Company have been looking forward to the settlement of the tariff for a long time to quicken orders and especially shipments, and join with the trade in welcoming the end of the Customs war.

From New Brunswick's Capital—Effect of the Tariff.

St. John, N.B., August 11.—The last fortnight has been one of many interesting developments, speaking locally as well as generally. The event of most general interest and importance was the adoption of the new tariff bill in the United States with its changes in the duties on long lumber, shingles and lath. The change in the duty on long lumber to \$1.25 per thousand superficial feet is perhaps less important to local manufacturers than at first glance seems to be the case. The amount of the reduction, 75 cents per thousand, will probably have little effect in the way of diverting spruce deals sawn from provincial logs to the American market, although there have been cases in which New Brunswick manufacturers have, during the past year, shipped large and important lots of spruce deals to the New York market, paying the duty thereon of \$2 per thousand feet. Still, though the reduction of 75 cents puts the American market on a basis from which it is more feasible, more apt (by 75 cents per thousand) to enter into the calculations of local shippers of spruce deals of the dutiable sort, it is very improbable that the change will have the result of turning any important quantity toward the New York markets.

The increase of 20 cents per thousand on shingles is, on the other hand, of great importance to local shippers of this line of goods; is, in fact, a much more vital circumstance than the reduction in the duty on the other lines. The shingles cut from American cedar have grown less in volume each year and the output of provincial shingles has increased in proportion, some of the mills owned by Americans having sawn quantities of provincial cedar logs, paying the duty on the shingles sawn therefrom. There is no doubt that the value of provincial cedar logs will suffer as a consequence of the increase in the duty. Thus the resident of Maine who markets his logs in New Brunswick will find them quite as valuable as before but his neighbor on the opposite bank of the St. John river will find that the value of his has shrunk to an important extent. In many cases, of course, local sawmill owners cut their own cedar by contract from limits upon which they own the stumpage, and in such cases they will be obliged to stand the brunt of the change in the duty on the shingles. Indeed, as a matter of fact, it is generally regarded as a change which the manufacturer of dutiable shingles will be obliged to bear practically in its entirety. As few of the lower grades are exported, the "Extras" and "Clears" only are affected.

The reduction of 5 cents per thousand in the duty on provincial lath is regarded as of little importance, while in the right direction. So small an amount could, however, have little consequence of importance in any manner.

In trade circles the fortnight has been an important one, the stimulus in the lath trade, an increase in price and a considerable betterment in the demand for lath being the principal features. The present advance in the price of this line has taken place considerably earlier than was expected, owing to the fact that the trade seldom shows any increased stimulus until the brightening up of business generally following the end of the hot and holiday season. Coming, as it does, at this time it is considered by many in the light of a forerunner of a fall trade that will be productive of a snappy demand and high values.

Local stocks of spruce lath are no doubt lower than is usual at this time of year, shipments throughout the summer having been frequent and considerable in dimension. The total local stocks at present would

**If you are burning sawdust, and
your grate bars choke up**

—put in—

The Gordon Hollow Blast Grate

This grate not only injects air into the furnace IN A POSITIVE MANNER, thus stimulating combustion, but KEEPS THE SAWDUST LOOSE, and gives the natural draft a chance.

It makes it easy to run the mill with sawdust alone, even if wet, green or frozen.

It is equally efficient with slabs or other coarse fuel.

It makes it easy to keep up steam.

It renders you independent of the weather.

It is so exceedingly durable that in the end it is so much cheaper than an ordinary or draft grate that there is no comparison.

SOLD ON APPROVAL, subject to a test of thirty days. In case of rejection, WE PAY THE FREIGHT BOTH WAYS.

F. W. Beach will rebuild his mills near Iroquois which were recently destroyed by fire.

The E. B. Eddy Company have begun the hiring of men for spruce limits on the Rouge river. J. R. Booth also has sent men away, paying \$30 a month, a wage which last year was given only to his pick men.

The Spiesz Furniture Company, Limited, Hanover, Ont., has been incorporated with a capital of \$60,000. Incorporators, H. and J. J. Spiesz, G. Boettger, B. F. Ahrens, F. Becker and W. Robertson, all of Hanover, Ont.

An examination of those desiring to qualify as cullers, to measure timber cut on Crown lands, was held at North Bay and Kenora on August 12. Examinations will also be held at Arnprior on August 19th, and at Thessalon on August 26th.

The Madera Company, Limited, has been incorporated under Dominion charter to carry on business as lumber dealers and manufacturers, etc. Provisional directors: J. S. Lovell, W. Bain, R. Gowans, H. Chambers, R. M. Coates, E. A. Dyer, G. H. Cassels, Toronto. Capital, \$5,000,000.

The Kent Cooper Company, Collingwood, are erecting a new sawmill. The company hope to have the mill ready for operation about the middle of September. It is expected that between a million and a half feet of lumber will be cut this fall. They will employ between 25 and 30 men. The company recently received its first instalment of logs, a raft containing 45,000 pieces of hemlock, from French river. For convenience of storage, they have been divided, a part being put into the pond at Charlton's mill and the balance in the pond in front of the new mill property.

Eastern Provinces

Hon. Jules Allard, Minister of Crown Lands for Quebec, declared recently that the stumpage duties would be considerably increased at the next session of the Legislature, and action would be taken to prevent the exportation of pulpwood.

Recent incorporations include: H. Walters & Sons, Limited, Hull, Que., capital \$350,000, to manufacture contractors' and lumbermen's tools. Incorporators, M. P. Walters and J. E. Gravelle, both of Hull, Que.; J. W. Walters, H. I. Thomas and J. Walters, jr., all of Ottawa.

Rhodes-Curry Company, Limited, Amherst, N.S., capital \$3,000,000, have been incorporated to take over the business of Rhodes, Curry & Company, Limited, general merchants, lumber and timber merchants, contractors, etc. Incorporators, E. F. Surveyor, K.C., G. V. Cousens, F. C. Clarke, S. B. Hammond and H. G. Boyle, all of Montreal.

Tenders are being received until Sept. 1st for the purchase of the Joseph Villeneuve Company, at St. Romuald, Levis county, Quebec. The property, factory, machinery and supply of wood, including 350,000 feet of spruce, 80,000 feet of pine, and 90,000 feet of cherry, will be sold, also a quantity of panelling, flooring and manufactured spruce, cherry, mouldings, etc. Tenders are being received by J. B. Bourassa, St. Romuald.

A new lumber company has been organized in Bridgewater, N.S., called the Bridgewater Lumber Company, capitalized at \$50,000. The members are Nathan Veinot, Boehner Bros., Edward Zwicker & Sons and others. The officers of the company are Nathan Veinot, president; James Zwicker, vice-president; Geo. A. Boehner, secretary-treasurer; Fred Boehner, managing director. J. W. Margeson is solicitor for the company. The head office is at Bridgewater, Nova Scotia.

It is reported that the Aberdeen mill property at Fredericton will shortly be disposed of by the Messrs. Fraser & Sons to the Stetson Cutler Company, of St. John. J. Cutler, a representative of the company, was in Chatham, N. B., recently, and intimated that it was the intention of the company to go into the manufacture of pulp if a suitable place at Fredericton could be secured. If this deal carries it will probably mean the erection of a large pulp mill at Fredericton.

The Chaleur Bay Mills, at Mission Point, Que., have been totally destroyed by fire. The fire started under the mill between the engine house and mill, and it is supposed to have been caused by a heated journal. It spread to the lumber piles near the mill and these were burned, but about five million feet of high grade lumber piled on the wharf and vicinity were uninjured. The exposed sides and tops of piles were covered with sails and blankets and kept wet while the fire raged. The engine and boiler house, which was of concrete construction, was not damaged. This mill was built about six years ago, and was one of the finest in Eastern Canada. It was built on massive concrete abutments and was equipped with the most modern machinery. Mr. David Champeaux is the manager of the company, whose principle stock holders reside at Portland and Bangor, Maine. The mill was valued at \$138,000. The insurance is \$50,000 on the mill and \$40,000 on the lumber. Negotiations are under way to procure one of the Richard Company's mills to complete the season's sawing.

The Forest and Lands Department of the Province of Quebec has decided to dispose of all timber on a strip one mile wide along the National Transcontinental from Latuque, near Quebec, to the western limits of the province, and tenders will be asked for at an early day. The aim of the department is to assist the builders of the Grand Trunk Pacific in getting their supply of timber and at the same time taking advantage of a good opportunity of adding a fair sum to the provincial treasury funds. The strip of land will be divided into sections of thirty and forty miles and special prices will be asked. The privilege of cutting the timber will be sold for only five years, and will not be renewed at the expiration of that term. The initial prices will be \$5 a mile against \$3, as it is now, for common timber land, and the stumpage duty will be \$5 a thousand feet of pine, against \$1.30, as it is now for other lands, and \$3 for spruce, against 65 cents, as it is elsewhere. On railroad ties the duty will be 5 cents each, against 2 cents, as it is now on other Crown lands. It is expected that the province will realize between \$200,000 and \$300,000 from those lands.

Western Canada

The Pioneer Lumber Company have purchased six lots on Pacific avenue, Winnipeg, for a lumber yard site.

T. D. Robinson & Sons, of Winnipeg, have been awarded by the city, a contract for the supply of \$1,000,000 feet of lumber, board measure, at \$21.025.

The Hunting Lumber Company, of Vancouver, B.C., have been allowed ninety days in which to vacate all city property occupied by them near Columbia avenue and Front street on the south side of False creek.

The Great West Show Case & Manufacturing Company, Limited, has been organized at Edmonton, Alta., and will erect a factory in that city at a cost of \$50,000. Thos. H. Miller and Wm. Morris are interested.

Matthew G. Curran, D. McCleave, D. W. Nickercher, W. Wilson and Hugh R. Patriache, all of Winnipeg have been incorporated as "British American Mills & Timber Company, Limited," with a capitalization of \$25,000.

A timber deal of considerable importance has been closed in Seattle, Wash., which involves the purchase of 60,000 acres, largely yellow fir and cedar, on the east coast of Vancouver Island, 140 miles north of Vancouver, by those interested in the Edgar Lumber Company, Wesson, Ark., and the Freeman-Smith Lumber Company, Millville, Ark., and associates, among whom is C. A. Buchner, of Hamburg, Ark., formerly with the Crossett Lumber Company, Crossett, Ark. The tract is the final grouping of a number of small holdings into one large tract.

The newly created British Columbia Forestry Commission will commence its sessions at the beginning of the present month. At each point the commission will discuss questions with men of practical knowledge, and consider means of preserving the forest and timber resources of the province. Reforestation, fire protection and the present system of licensing timber areas will be the principal matters discussed. The dates of the sittings will be as follows: Victoria, Aug. 16, 17 and 18; Nanaimo, Aug. 19; Vancouver, Aug. 23, 24, 25 and 26; New Westminster, Aug. 27 and 28; Kamloops, Aug. 30; Vernon, Sept. 8 and 9; Revelstoke, Sept. 10 and 11; Nelson, Sept. 13; Cranbrook, Sept. 14 and 15; Fernie, Sept. 16; Grand Forks, Sept. 17.

Owing to action on the part of British Columbia sawmill men, the Railway Commission has notified the forestry department that it will send an inspector to British Columbia to look into the matter of the failure of railways to use screened smokestacks. The department has received a detailed report from the sawmills in British Columbia, which have kept tab on forest fires, and it is stated that every few days sparks from engines have started fires. Corroborative evidence is cited in the fact that back from the railways the fire loss is comparatively small, while along the lines, especially in the Kootenay, where the grades are heavy and much live coal is belched out of the locomotives, fires rage almost continually during the dry weather. For their own protection, the mills have kept patrols directly along the railways, with the result that many fires were nipped.

The Western Canada Wood Pulp & Paper Company, of Victoria, B.C., on July 27th combined their entire interests with the British Canadian Wood Pulp & Paper Company, Limited, of Vancouver. The former own 55,669 acres of pulp limits at Quatsino Sound, a 25,000-inch water record on Marble Creek, and valuable foreshore rights. The new company will carry out the plans of the Quatsino Sound Company and erect a plant on Quatsino for the manufacture of newspaper and wrapping paper only. Another plant, which will open for business in a few weeks at Port Mellon, B.C., will be exclusively used for the manufacture of fine grades of paper. The amalgamation will render possible more economical administration on the part of both concerns. The shareholders of the Quatsino concern will exchange their stock for seven per cent. preference stock in the Port Mellon Company.

E. B. Kurtz, president of the American Finance & Security Company, of New York; W. R. Welsh, timber broker, New York, and his western representative, F. J. King, Seattle, Wash., were in Vancouver last week and went up to Howe Sound to inspect a large cedar and fir proposition. The area consists of 28 sections. Four cruisers accompany the party to check up the original report. At the conclusion of this trip the party will proceed to Vancouver island, where various tracts of timber owned by different individuals, as well as by the Canadian Pacific Railway, will be inspected. The area it is proposed to acquire consists of about 100,000 acres adjacent to and north of Cowichan lake. If the deals come to a successful conclusion two large sawmills and a 30-mile railway will be built. Last winter, Mr. Welsh, who is senior partner of the firm of Lyons & Welsh, New York, sold the Jordan river timber limits on Vancouver island to a syndicate of Michigan capitalists.

The Barnett-McDonald lumber and shingle mill, on Lulu Island, near New Westminster, B.C., was recently burned; loss about \$100,000; insurance \$55,000. The fire was discovered by the night watchman shortly after coming on duty. The city firemen on arrival found the water supply defective, and the fire raged unchecked until the arrival of the Fraser River Lumber Company's fire steamer Senator Jansen. The dry kiln, the greater part of the lumber, and the outbuildings were saved. The plant will be rebuilt as speedily as possible, the firm owning valuable timber limits. The same day the sawmill at Abbotsford, B.C., owned by Willbank & McPherson, was burned at 3 p.m. The mill was closed down for the afternoon, some Hindus remaining to load lumber. The blaze started in a pile of sawdust near the planer and swept through the mill and yard, fanned by a stiff breeze, causing a loss of from \$20,000 to \$25,000. The yard contained one million feet of lumber. The mill will be rebuilt.

A Victoria, B.C., despatch states that the deal for a large tract of timber and farming land in the Cowichan lake district, which has been hanging for some time between an American company and the C.P.R., is now all but consummated. The transaction involves a number of features which make it of interest. First, it insures the opening up of what is believed to be the finest timber valley in the province—a valley which will keep the railway in freights for half a century. Second, it involves the early construction of the much desired C.P.R. extension to Cowichan lake, affording quick access to a splendid sporting area and to lands of great fertility. It will also mean the abandonment of the Cowichan river as a highway for the conveyance of logs, and its preservation as a trout stream. One clause of the contract now pending provides that the company shall erect a large mill, presumably on Cowichan bay, and another at Cowichan lake, and that as soon as the company is ready to ship its logs and lumber the railway will have facilities provided for transferring them to the bay by rail. It is also understood that a very advantageous freight rate on these logs has been secured from the company, and that this rate will be available for all shippers who wish to take advantage of it. The Cowichan district has been practically untouched by the lumbermen, for although of great wealth the Chemainus and other lumbering concerns have contented themselves with holding their reserves there for the future.

NORTH TONAWANDA, - N. Y.

TRADE WITH CANADA SOLICITED.

aggregate to six and one-half millions, of which two-thirds is dutiable stock. The local value of lath at present writing is from \$2.80 to \$2.85 per thousand for the dutiable article.

The local trade in spruce deals for export to the New York markets has been marked by a long season of monotony, there having been little up or down in any phase of the business throughout the summer months. Generally speaking, the early autumn is expected to bring interesting developments in this portion of the lumber trade. Local demand has been steady although marked by no particular snap. Shipments have been frequent but production has been lighter than usual because of the fact that two of the local mills owned by Americans are sawing provincial logs exclusively. Local stocks are moderately light, from twelve to fourteen hundred thousand would properly describe the quantities of this line of goods on the local wharves. The local value of "American" spruce deals ranges from \$16 to \$16.50 on 3 x 6 and 3 x 8, and from \$20 to \$20.50 on 3 x 10 and 3 x 12.

Boundary Marking in the Forest Reserves.

Mr. R. H. Campbell, Dominion Superintendent of Forestry, and Mr. A. Knechtel, of the Forestry Branch, are making extended visits to Manitoba and the West. Mr. Campbell has inspected the fire patrol service in the forest reserves near Prince Albert and other points in the West. On August 5 and 6 he attended the irrigation convention at Lethbridge, and he hoped also to attend the national irrigation convention at Spokane, August 9th to 14th.

Mr. Knechtel, speaking of the work of the forestry branch, in an interview, said:

"One of the matters which we have in hand this summer is the locating of the boundary line on various forest reserves of the prairie provinces. From time to time timber is stolen from these reserves and when the matter is investigated the guilty parties usually claim that they were innocent of any intention to defraud, that they were not aware where the line of demarcation was. The department is now making the line clear, marking it with a series of iron stakes. Lines are being cut through the forests, eight feet wide, and roads are being constructed. The low places on these roads are being filled with brush, so that a waggon can be driven about the reserve. In case of fire the men engaged can be driven by these roads, from point to point, and in case of fire coming in from the prairies, these roads can be advantageously used as points from which back firing can be done. In the Spruce Wood reserve, near Brandon, the Canadian Northern and the Canadian Pacific Railways have just completed the plowing of fire-guards along their rights-of-way. These guards are being plowed on many of the reserves, and one has just been completed around the Cypress Hills forest reserve in Alberta.

"This year there have been very few fires on any of the reserves and those which broke out have been quickly extinguished. The only fire of any consequence was one on the Riding mountains, and in this case there was very little heavy timber destroyed, although smaller trees, chiefly poplar, were burned. No spruce nor pine were destroyed."

New Freight Rates Objected to by U.S. Coast Mills.

Sweeping reductions in the rates on forest products from points in Montana to the consuming markets in North and South Dakota, western Minnesota, Nebraska and other middle western States, with no corresponding reductions from coast shipping points, are contained in the new transcontinental freight bureau lumber and shingle tariff, which becomes effective on August 15. The new tariff also shows that the northern roads, the Great Northern and Northern Pacific, have made sharp reductions on rates to points in the middle west to which the Chicago, Milwaukee & Puget Sound road cut the rates on lumber and shingles. Lumbermen declared recently that the new schedules will be disastrous to coast mills, and are likely to result in the loss of more trade than did the efforts of the transcontinental lines to advance the rates from coast points two years ago, which, after much litigation, the lumbermen were able to head off in a large measure.

For the purpose of affording protection against fire in the forests of Idaho and Washington, the Chicago, Milwaukee & Puget Sound Railroad is equipping about forty of its locomotives as oil burners. H. B. Earling, general superintendent of the company, says that if the railway could avoid fires by precaution there would never be a burned stump along the line of the road. The oil burners will be used on two divisions in the Bitter Root mountains and between Seattle and Cleelum, in the Cascades.

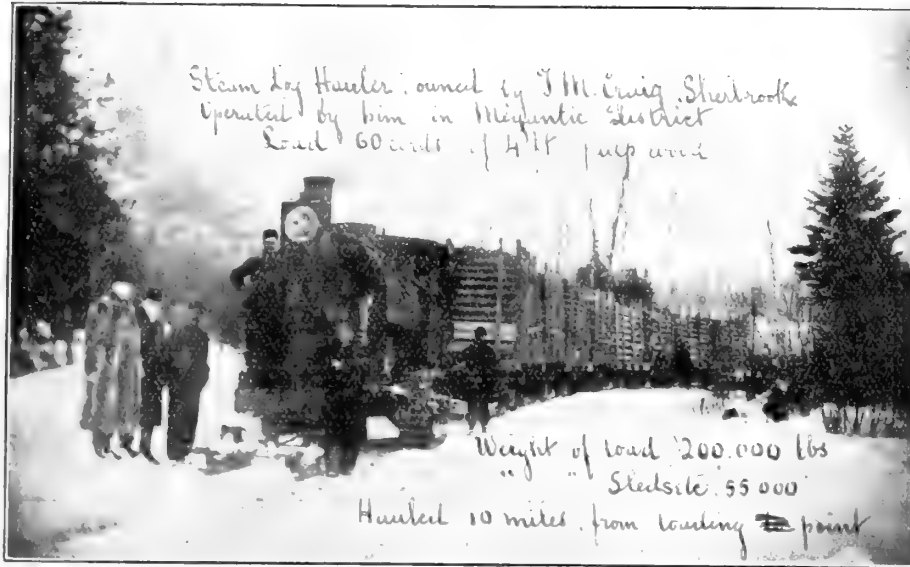

The business of the J. C. McLaren Belting Company, Montreal, has been reorganized under letters patent of the Dominion of Canada. The business was established in 1856 and conducted since 1895 under a Quebec charter. It will now be carried on under one management for the whole of Canada, with head office and factory at Montreal and branches at Toronto, Winnipeg and Vancouver. The company report that their business is being operated without interruption and that having recently increased their plant they are better equipped than ever to execute promptly all orders for belting, card clothing, reeds and mill supplies.

Works: Sherbrooke, Que. St. Catharines, Ont.

A Popular Cutter Head for a Popular Service

That of matching single tongue and groove flooring, ceiling or plank, with bits interchangeable and readily set up by a standard guage to bring all the tool edges into equal cutting relation around the head centre. This forms first of all a perfect cutting tool wherein every cutter does its share of the work—no more. The cutters being circular and secured to inclined bit seats establishes a system of perfect edge and point clearance, enabling them to cut in any lumber without binding or burning the wood.

Every practical man should understand the use of THE SHIMER CUTTER HEAD. We publish a large catalogue giving full description of the tools as well as many hints to practical men. Send for a copy free. Address

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

You Can't Get Away

from
the
fact

that quality and general satisfaction are what count in building up and keeping a satisfied constituency. Now just a word as to where we come in. We own extensive timber lands and mills in the Province of Quebec and through the application of the most modern methods and personal supervision to manufacture we can say unqualifiedly that our Spruce and Shingle products are the kind that suit. We're satisfied and you will be if you give them a trial. They are "Quality Lumber and Shingles" and that's all we aim to sell you. Send us an inquiry.

The Madison Williams Manufacturing Co., Limited

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

Truing the Knives on a Woods Planer

In less than three minutes the knives on both heads can be trued on a Woods Planer equipped with Truing Devices (patented July 2, Dec. 10 and 17, 1907). What is more, it can be done without stopping the machine or disturbing any adjustments. You can then be absolutely sure that all the knives are cutting exactly alike and that there is nothing to prevent feeding at a rate as much over 100 feet per minute as you desire.

R. H. SMITH CO., Limited

— St. Catharines, Ont. —

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. All such Claims are FALSE, as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"
REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

PETERBORO SAW MILLS

How the Steam Tension Band Mill increases your daily cut and saws uniform lumber

Think how much more sensitive a steam controlled device is than any system operated by weights and levers.

On our band mill we control the tension on the saw by steam, which is the only way we know of to keep the right strain **always** on the saw.

Thus your saw is always in shape to turn out perfect lumber, and you get a uniformly sawn product.

As the top wheel is moved up and down by steam, when you change your saws you save **all** the time (except ten seconds) formerly taken to lower and raise that wheel and get the proper tension on the saw. That is because no system of screws and gears can act as quickly as steam.

The top guide is also operated by steam so that the sawyer can raise or lower it **instantaneously**.

You see therefore that this is **quicker and easier** to handle than any weight tension mill.

That means more lumber every day.

A number of Canadian mills are cutting with it this season. Would you like to know who they are so that you can see it working before the mills shut down?

Detroit Columns

are Standards of Excellence

In sales, in popularity and unequalled style and finish Detroit Columns are second to none. An examination at any stage of manufacturing will speedily convince you of the high grade material and excellent workmanship employed in their production. Our famous "Lock Joint" eliminates all possibility of shrinkage or warping, and presents that clean, even surface so much in demand. We stock in Pine, Birch, Oak and Chestnut.

A combination of Real Quality and Style is a sure winner in any line. Detroit Columns offer the retail lumber dealer many opportunities of adding to his reputation and to his annual profit. Why not investigate?

The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one:—

Berridale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited, Orillia.

Dear Sirs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

SIMONDS

Inserted Point Saws

Made in Montreal

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take \$100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.

An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

WIRE ROPE

Why experiment continually with wire rope you know is not up to "Dominion" quality—quality that means better material, better construction and better service?

MATERIAL—All our ropes are made from the best quality of imported wire, specially drawn to our own specification. Each coil is carefully tested for its tensile strength, torsion, flexion and elastic limit.

CONSTRUCTION—Every step in the construction of our wire ropes is carefully watched over by experts. Our many years experience in manufacturing wire ropes enables us to offer the best to be had anywhere.

SERVICE—Every length of "Dominion Rope" gives satisfaction, because it is serviceable and dependable.

All lengths and sizes carried in stock for immediate shipment.

The Dominion **Wire Rope Co., Limited**
Montreal

We are Specialists on Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only "The Best Protection at the Minimum Cost" in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our "ADVICE SHEET" system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 17

Car Shortage a Serious Matter

The announcement recently made by Mr. W. A. Anstie, secretary of the Mountain Lumbermen's Association, that the railway companies expect to be unable this year to handle lumber shipments while the crop movement is under way, should cause lumber manufacturers to lose no time in completing orders which they have recently received and in seeking orders for whatever stock is likely to be needed by their customers for a few months ahead. Everyone wishes the farmer prosperity in the form of plentiful crops, but there is another side to the matter, and an impartial statistical record of the value of the crops to the farmers of the country would make some set-off on account of the loss to the farmer and to the whole country, as a result of the annual car shortage which occurs when the crops have to be sent to the markets. It is a difficult matter to see how this trouble can be permanently overcome, yet it is so serious and regular in its occurrence that there is room for much improvement.

The movement of lumber at this particular time, although not of such great importance as the movement of the crops, is more important than it has usually been in the fall. The lumber business is just emerging from a period of depression which has been long-lived, and extremely disastrous to lumber manufacturers. The demand from the prairies has become very strong as a result largely of last year's good crop being succeeded by another good one this year. Cause and effect are in this manner closely linked, and the lumber which the farmer wants, is so urgently needed that the coast mills have recently been flooded with rush orders. How these orders can be filled when every available car is being used for the hauling of grain it is hard to see. At the recent meeting of the Mountain Lumbermen's Association a strongly worded resolution was adopted upon the subject, and forwarded to the railway companies. The latter are, no doubt, well seized of the situation and will do what

they can to prevent long delays. The lumbermen are rightly alarmed as they have had so many drawbacks to contend with during the last two years, and the occurrence of another, just at the time when business is beginning to approach normal, threatens to deprive them of the only harvest they have come near to reaping in a long time.

The long-experienced depression in the lumber business has caused a general diminution in the stocks carried by retailers. With the demand from consumers on the increase the retailers have not sufficient supplies to sell them, and they are obliged to call urgently for stocks. Thus the situation is further aggravated, and it may well be, that in the face of a rapidly advancing price for lumber the manufacturers, with plenty of stock on their hands, will be unable to place it in the hands of those who wish to buy. Possibly the difficulties which are now feared will not materialize. The probabilities, however, are all pointing in the other direction. In the United States the same trouble is apparent, only in an even more aggravated form. The railroads there have allowed their rolling stock to depreciate to a much greater extent than those in Canada, in their endeavor to keep down operating expenses on account of reduced revenues. Railroad officials have been of the opinion that when business improvement came it would be so gradual that they would have plenty of time to cope with it. It begins to look now as though this belief was not justified.

In a reference to this subject by the "American Lumberman" the situation is well summed up as follows:

"Anticipating a car shortage of such magnitude as to affect the entire lumber industry of the country, those buyers of lumber who expect to need stock during the fall months, those who are not carrying well assorted and ample stocks at the present time, should get their orders in just as rapidly as they can place the business, bearing in mind that no successful business will be conducted upon narrow margins of supplies during 1910. The hand-to-mouth method has become a habit during the last two years; but this is the time to break it, for the dealers or the factory caught with an inadequate stock three or four months from now will be compelled to pass by opportunities which, if taken advantage of, may help to make up for the two years of depression now closed. This is the time to buy, and the laying in of a reasonable stock before the heavy traffic of the fall blockades the country's transportation lines can not be counted recklessness, but will rather be the evidence of an exercise of the best business judgment."

French-Canadians for the Coast

The step taken by the Fraser River Lumber Company in the direction of substituting French-Canadians for the Japs, Chinese and Hindus in their mills is meeting with a great deal of commendation among the people of Vancouver. French-Canadians are being brought from Quebec to replace the Orientals, who number about one-half of the force engaged at this firm's mills, near New Westminster. A large number of Orientals are also employed in the company's logging camps. From the outset the hiring of Orientals has been an unpleasant necessity. The Hindus employed in the mills are said to have been remitting about \$7,000 a month to India, and the Chinese and Japanese do the same thing to a greater or less degree.

The plan of the management of the Fraser River Company is to replace these Orientals gradually. The working out of the plan has been placed in the hands of Father O'Boyle, parish priest of New Westminster, and Mr. Theo. Theroux, of the Fraser River Mills, who recently left for Quebec to bring out the first detachment of 100 men. In order to secure these men they are going into the lumbering districts of Quebec and thoroughly acquainting the lumbermen with the conditions existing on the coast. It is hoped that in the end some 500 expert mill operatives and loggers will be induced to go to the West, the married men taking their families with them. The company expects to have to pay larger wages to the French-Canadians than to the Orientals, but at the same time they expect that they will secure much better work and also furnish employment to a better class of people, who will spend their money in the country instead of sending it to their families in other lands.

The scheme of the company includes a plan which will enable the new employees to make homes for themselves in the West. Cottages for the men have been erected on a large tract of land near the mills. The employees will be allowed to purchase these houses and a one-acre plot

from the company on easy terms. They will be able in this way soon to own their own homes. The owner of such a plot will be allowed to rent or sell it, if he wishes. If he wishes to leave before the whole is paid for, the company will take it off his hands at cost less a slight reduction for interest and depreciation.

Other employers of Oriental labor on the coast will watch this experiment with a great deal of interest. If it proves satisfactory it will probably be adopted by others. It is believed that in this way one of the most serious problems at present facing the mill owners of British Columbia will be solved satisfactorily.

Importance of Logging Railroads in Development of the Country

A strong factor in the development of the lumber business upon the Pacific coast has been the promotion of logging railroads, which, in the neighborhood of Vancouver particularly have recently become quite numerous. The first cause for the building of logging railroads is the fact that the timber along the coast has been thinned out, and that loggers are obliged to go back considerable distances in order to secure suitable timber. There have recently been quite half a dozen of these logging railroads constructed in part, and a number of others are at present being built. Great blocks of virgin timber of the finest quality will be opened up by them. A noticeable result is therefore likely to be a great improvement in the quality of the lumber and shingles manufactured by the mills of those firms which are interested in the railroads. It is expected that this improvement will have a substantial effect also upon the market, acting as a considerable advantage. In this way the benefits of logging railroads will advertise themselves, and other firms are certain to follow the course of those who have been pioneers in the work. It is interesting to notice the growing application of these methods of lumbering on huge scales which are now being made in British Columbia. This stage was long ago reached in the country to the south of the border, and Canadians who are adopting them have the assurance that they are adopting methods which have been proved by experience to be successful.

A favorable feature in connection with these railroads is the fact that they are well built and equipped, and will therefore be of consider-

able assistance in the settlement of a number of valleys in the interior of the province. In these valleys the soil and other conditions are well adapted to the growing of fruit and vegetables, but until the present they have been lacking in communication with possible markets. An instance of the advantage to be obtained by the construction of logging railroads into these valleys is afforded by the case of the Heaps Lumber Company, whose railway up the valley of the Stave river, at Ruskin, B.C., will open a section of country which it is claimed is unsurpassed anywhere. The same is true of other districts which are being opened up in a similar manner.

With the removal of the timber it will be natural for the owners of the limits to seek to acquire other limits in the neighborhood and to add to the mileage of their logging railroads. The railroad will thus become increasingly valuable as a factor in the settlement of the province. One of the latest of these logging railroad propositions is that of the Vancouver & Northern Railway Company. They propose to build a road from Burrard Inlet, Vancouver harbor, up the Seymour valley behind North Vancouver, and over the divide of the Mamquam river, which will be followed to the Squamish. This line would facilitate the transportation of billions of feet of splendid timber in the Mamquam valley and at the head of Seymour creek, while incidentally it would be of material assistance in the development of the mineral and agricultural resources of the country.

Common Sense Decision of the Maine Log Scaling Commission

The action of the Maine Log Scaling Commission in reporting in favor of the use of a cubic foot caliper rule has met with much general approval. The "Forestry Quarterly" in dealing with the subject says:

"At last patriotism in holding on to the established and antiquated is to be supplanted by common sense. The Legislative Commission of Maine appointed to investigate the methods of scaling logs and lumber, have made their report, and state in substance the following:

"The board foot is not the proper unit for log measure since it is relevant only in case of lumber manufacture, but entirely irrelevant in pulp, staves, veneer, and other industries. The cubic foot should be the unit of measure and each manufacturer should calculate the product he could manufacture in board feet, pounds of pulp, number of staves and square feet of veneer, and fix the price accordingly. The contract logger, figuring in cubic feet, would then be paid according to the weight he handles, whether the logs are large or small. In contracting by the thousand board feet, as is now done, he handles a larger weight of small logs

per thousand than of large logs. The Commission recommends the substitution of a cubic foot caliper rule as the legal rule for Maine, arguing that, besides applying to all industries involved, it would aid economical logging and full utilization of material.

"To a forester, there is no need of pointing out the soundness of this conclusion. He knows that the logs always did grow into cubic feet, and, if the irrelevant and tedious translation into board feet, which is dependent entirely upon the judgment and practice of the scaler and the miller is avoided, his fate will be a happier one. It is very evident that if log measurement is to be standardized for the entire country, the cubic foot caliper rule applied at the middle of the log will be applicable for all states, all industries, all species, whatever their taper, and for long logs as well as short logs. While the volume by the middle diameter method is not entirely exact, especially for very long logs, the error is very small in favor of the buyer. But it gives by far the better result in comparison with end diameter measurement.

Suggestions for Shippers to the Lumber Markets of Cuba

A recent issue of the Canadian Trade and Commerce reports contains useful information regarding lumber imported by Cuba. The information which has been obtained from some of the large manufacturers, is as follows:—

Cuba consumes annually from seven to nine million feet of spruce, practically all of which comes from Nova Scotia. It is used almost exclusively for making boxes, shooks and trunks, and the requirements of the market demand that it must be a full inch in thickness. Manufacturers catering to this market would do well to have the green lumber cut $1\frac{1}{8}$ -inch. The reason for this is that each board is split in three, and if it is less than a full inch when dry it is not suitable. It is usually imported in cargoes of from 300 to 450M. feet, and the prices run from \$20 to \$24 c.i.f., with average length not under $10\frac{1}{2}$ to 11 feet. Most of the consumers insist on special specifications—that is, the greater part of the cargoes must run 8-inch in width; a certain percentage 9-inch; some

10.6-inch; 6-inch is the smallest accepted. The quality is the "common merchantable grade." Cargoes have been sold this year at \$23.75 on the following specifications: 400 M. feet, 5 per cent. 6-inch; 10 per cent. 7-inch; 75 per cent. 8-inch; 5 per cent. 9-inch, 5 per cent. 10-inch and over.

White pine is imported chiefly from Upper Canada via New York, and from eight to twelve million feet are consumed annually. Very little white pine comes from the Maritime Provinces, as it is said here (whether justly or not) to be of a coarser grade, and a second and smaller growth. White pine for this market ranges in price, based on carload lots, grade "West India shippers," from \$29.50 to \$34 per M., specifications running 1 x 8, 1 x 10, 1 x 12 and 1 x 14, in stock lengths, 12, 14 and 16 feet.

Another grade of the above, known as No. 1, sells at from 50 cents to \$1.50 more per M. No. 7, clear, in sizes 1 x 12, 12 and 16 feet, sells as high as \$52 per M. The price on the latter has increased \$6 per M.

in the last year, but the market is limited. Yellow pine is more extensively used than either of the above, but is entirely unsuitable for some purposes for which the above are imported, and, in this respect,

can never compete with them. It formerly sold for the same price as spruce, but is now several dollars per M. cheaper. Hemlock pays a duty of \$2.60 per M., and is but little used.

Serious Drawbacks in Quebec's Timber License Regulations

Reference was recently made in the "Canada Lumberman" to the unjust attacks upon timber license owners in Quebec province. In this connection, the other side of the story is well outlined in an article by E. Wilson, B.A., C.E., in the "Forestry Quarterly." Mr. Wilson writes as follows:—

"The forest policy of the Quebec Government is a most admirable one in theory, with one very serious exception. All timber lands are the property of the Crown and are not sold, but the license to cut is leased, practically in perpetuity, for a nominal ground rent and so much per thousand feet stumpage dues when the timber is cut. Cutting regulations are in force, but there is no adequate inspection and the regulations are obeyed by the licensees only because they believe it is to their interest and profit to do so. But the Government reserves the right to take lands out of a license-holder's territory for settlement, giving him until the first day of May, following the issuance of a ticket of location to a settler, to remove the timber down to the diameter limit set by law. The settler generally waits until the companies have finished their winter's operations before applying for his land, so that there is no possibility of the company removing the timber, and as the diameter limit does not apply to the settler he is able to cut the land clear, selling either to the original license-holder or to some rival concern. There would be no objection to the sale of lots to settlers if the lands were actually agricultural lands, better fitted for farming than for the growing of timber, but this is not the case. No attempt is made to classify the lands, and, when a license holder protests, some local official is sent to make an examination and report, and he is always ignorant and generally dishonest. Investors in timber licenses in this province have called the attention of the

Government to this state of affairs for a long time, and the general feeling now is one of distrust and insecurity. Large holders of timber lands are very anxious to manage them according to the most up-to-date forestry methods, are willing to put money into permanent improvements, roads, telephone lines, plantations on burnt-over areas, etc., but they dare not do this since there is no assurance that at any time their ground rents and stumpage dues may not be raised beyond all reason, or their best lands given over to speculators masquerading as settlers. Only this fall, just before the general election, a member of the Provincial Parliament went to the Minister of Lands and told him that in order to win his election he must have some lots for his constituents. The order for the sale of sixteen lots was issued to him, lots whose only value consisted in the timber on them; there were no roads, the soil was poor, the land hilly and in no sense fitted for agriculture. Fortunately, the license holder discovered what was afoot, and by taking the matter directly to the Prime Minister succeeded in getting the sales cancelled. Capital, however, will not feel secure in investing in this province until such things are eliminated.

"The great need is for an honest and intelligent classification of lands so that those better fitted for timber than for agriculture can be kept in forests, and that the man who puts in money in timber licenses can feel that he is being justly treated and his rights protected. Nowhere on the American continent are owners of timber lands more ready and willing, indeed anxious, to manage their lands under forestry methods than in the Province of Quebec, and its wealth lies almost wholly in its forests and water powers, and everything possible should be done to conserve and protect them for all time to come."

Timber Resources of the Eastern Slope of the Rockies

An interesting article on the timberland of the eastern slope of the Rockies, by Mr. H. R. MacMillan, appeared recently in the "Canadian Forestry Journal." Mr. MacMillan draws attention first to the difference of character and situation of this timberland from any other in Canada. From the international boundary 140 miles north to the main line of the Canadian Pacific Railway, the forest area consists of a strip 15 to 40 miles wide between the elevations of 3,500 and 6,500 feet. The whole of this mountainous belt is not under timber; a large proportion of it, that which comprises the very steep mountains, the summits of the ridges and the higher peaks, is, because of its very rocky nature or extreme altitude, incapable of producing commercial timber. The remainder of the area, the valleys of the main rivers and their tributaries, the gentler slopes leading to them, and the lower ridges separating them, have in the early years been completely covered with dense stands of lodge-pole pine, Englemann's spruce, and Douglas fir. These species, especially east of the summit of the continental divide, do not produce as much lumber per acre as is common in the forests of British Columbia; the trees are small, rarely exceeding eighteen inches on the stump.

The great value of the east slope forest to the lumberman lies in the fact that the timber is small and easily handled, that the formation of the country presents no great difficulties to render logging expensive, and, most important of all, that it is a short distance and down grade from the timber to the prairie market. Its natural situation has thus placed upon this pine and spruce a high value, which is attested by the fact that nearly every square mile of timber on the eastern slope of the Rockies, accessible or inaccessible, is at present held under license. At present only a few of these limits are being worked. The sawmill capacity on the east slope is not large; the present cut per annum of 31,651,000 feet has not yet cleared any large area of forest, and will not at its present rate of growth consume all the merchantable timber for a very long time.

That these limits only represent a small proportion of the area of the east slope is due to the incalculable damage wrought by fire; and that

the value of the limits is less than should be represented by the amount of timber involved is due to the constant and well-founded fear amongst limit holders that a fire may occur to-morrow and reduce to ashes what is to-day worth millions of dollars. The extent of the damage inflicted by fires upon the trade of the country at large, as well as upon the private holdings of lumbermen on the east slope, can hardly be realized. So numerous and so disastrous have been the fires that of the original 184 square miles of forest 39 miles remain. Nor is this the worst of it. The timber which does escape the fire is that at high elevations, where conditions are not so favorable to the production of heavy stands. The best timber grows in the valleys, on the wide exposed benches and terraces, and in the case of fire is always the first to be destroyed. The destruction of 145 square miles of timber has meant a direct loss of millions of dollars in trade and industries. But the loss cannot be measured by the loss of timber value alone. One fire may destroy only the timber, but a second or third kills all forest reproduction, and leaves a desolate waste which must remain absolutely non-productive for a long time. The soil is often unfit for agriculture, and of very little value for grazing purposes.

Other industries beside lumbering are affected by these fires. The Crow's Nest Valley is the home of the Alberta coalfields, and these mines need annually 3,000,000 feet of props, and it is important, of course, for the cheap production of coal that the timber should be grown as near at hand as possible. The slow growth of the timber and their absolute dependence upon the promise of large supplies of it have driven the mining companies to ask that the Government should take some steps promising relief.

Another great reason for the conservative handling of the forest on the east slope of the Rockies is its undoubted influence on the run-off of the water from the ice, snow, and rain of the district. There have been several bad floods in the North and South Saskatchewan rivers and tributaries which have done vast damage. These floods are ascribed to the denuding of the forests. The fires dry up the soil and cause the water to run off rapidly.

Successful Northern Ontario Enterprise

Evans Company Limited, of Sudbury, make rapid Strides — Incorporated 1906—Their Extensive Business of the Present Day

The new planing mill and sash and door factory of the Evans Company, Limited, is one of the latest industrial acquisitions to the growing town of Sudbury, Ontario. A glance at any recent railway map of Canada shows the important commercial position of this prosperous town, which undoubtedly has a great future as the natural distributing centre for a rapidly populating section of the great north. The large area which proclaims Sudbury as its commercial capital is rich in timber and minerals, and has the additional advantage of possessing a considerable area of fertile farm land, which insures the permanence and stability of the town.

Sudbury is, therefore, an ideal location for an enterprise like the Evans Company, Limited, which caters to every requirement of the builder and contractor. This company is the outgrowth of the Sudbury

tracks. The lumber is arranged with 18-foot alleyways between each pile, the piles having a 36-foot breast.

Situated in the foreground is the commodious brick office building, which is fitted up with all the latest office devices. Behind the office are the shipping and glazing rooms.

The lumber shed in connection with the mill has few if any equals in this country. It is 54 x 150 feet, double decked, with a team-way in the centre. The lower decks are racked for roofings, cements, dressed lumbers, etc., and the upper decks for mouldings, sash, doors, turnings, etc. The entire plant, including the mill, office and lumber shed, is roofed with Paroid roofing.

The planing mill, which is 80 x 80 feet, is equipped with a 4-sided jobbing planer and matcher of Cowan make, one Berlin flooring ma-

Building Supply Company. The new organization, which was incorporated in 1906, steadily outgrew its facilities, and it was evident that a plant of large proportions would be necessary to meet the demand for the company's products. The old plant was taken over by the Canadian Northern Railway for the site for their new terminal station and freight sheds, and the Evans Company secured for a new site about four acres adjoining the tracks of the Canadian Pacific and the Manitoulin & North Shore Railroads.

The erection of the new plant was started in August, 1908, and by Christmas time it was in partial operation. Since that time it has been fully completed. The layout of the entire plant is governed by the 50-foot space clause required by the fire underwriters, the mill being 50 feet from all lumber, and the lumber being kept 50 feet from the railroad

chine, one 12-inch Cowan sticker; one self-feed rip saw, one large double surfacer, one 5-inch band resaw, one sash sticker, all made by the Hespeler Machinery Company; one cut-up saw, turning lathe, together with a full complement of knife grinding, saw filing and belt-lacing machinery.

The sash and door factory, 80 x 64 feet, is equipped with one peler band saw, together with boring machine, arm sander, clamps, Hespeler mortiser, one Cowan tenoner, Hespeler jointer, 3-drum Cowan sander, Hespeler shaper, Hespeler combination saw table, and a Hespeler etc. The main shaft is hung on Chapman double ball bearings throughout, and every loose pulley in the mill is equipped with Chapman double ball bearings.

The dry kiln, shavings exhausting system and the heating system were installed by Sheldons, Limited, all the fans running on ball bear-

ings. The power is supplied by a 125 h.p. Robb-Armstrong engine, a 140 h.p. Goldie & McCulloch boiler, and a Smart-Turner return pump.

All the material is handled on the Dominion Wrought Iron Wheel Company's detachable trucks.

The mill construction is half timbered brick, getting light from the west through a saw-tooth arrangement of the roof, which gives absolutely perfect lighting. The mill is lighted throughout by electricity, and the heating arrangements are such that on the coldest morning in winter the men remove their coats to start work, after the fan has been going less than half an hour.

A large portion of the lumber used is supplied from the company's sawmill at Larchwood.

The Evans Company handles the most complete line of builders' supplies in the north. They control the output of the Sudbury Brick Company, which is allied with this firm, W. A. Evans, the president of this company, being manager of the brick company. They also have a concrete plant equipped with a full complement of machinery, including mixer, block machines, etc., which are operated under the company's own patents. Lehigh Portland cement, for which the company are agents, is exclusively used in all the lines manufactured, which includes cement

blocks, chimneys, tile, arch stones, and moulded work. Their patent chimney can be put up any height in sections of 12 inches each. It is particularly adapted for farm houses.

The officers of the Evans Company, Limited, are: W. A. Evans, president; F. H. Aurie, who has been associated with Mr. Evans for the past 15 years, vice-president and superintendent of manufacturing; D. H. Andress, secretary, purchasing and sales manager. The staff is composed of thoroughly practical men. Mr. Evans started life as a mason and graduated into contracting, which he successfully conducted for a number of years, during which time he built several of the largest blocks in Sudbury. Mr. Aurie and Mr. Andress were both good carpenters and

Group of Employees—Evans Company Limited.

builders, and brought to the new business an experience which is invaluable both to the firm and to their many patrons.

In addition to the regular planing mill work, the Evans Company does an extensive business at matching and dressing in transit.

U.S. Reader's Account of the Pulp and Paper Industry in New York State.

Editor "Canada Lumberman":—

Sir,—As the tariff on wood pulp seems to be of paramount interest, I wish to submit a few facts and figures to the readers of the "Canada Lumberman."

The State of New York ranks first, among the leading States, in the manufacture of print paper, mechanical and sulphite pulps. In the consumption of wood by the mechanical process, it falls only about 80,000 cords short of that reported for New England.

The wood fibre mills of this State—with the exception of those on the Oswego river, and at Lockport and Niagara Falls—are nearly all

Evans Company Limited—Interior of Lumber Shed.

located on streams having their source in that part of the State known as the Adirondacks. In order to avoid disclosing the operations of individual firms, I will include the mills north of Troy in one group; those on Black river in another; also, those mills located on streams flowing north to the St. Lawrence, and east to Lake Champlain, which I will designate as the St. Lawrence group.

First group (Black river district)—32 mills are located in this district, with a combined daily capacity of 734 tons of wood fibre paper.

Second group (Hudson river district)—26 mills are represented in this region, with an aggregate daily capacity of 944 tons of fibre papers.

Third group (St. Lawrence district)—17 mills are located here, in

the St. Lawrence and Lake Champlain valleys, with a combined daily capacity of 591 tons.

The Forest Service gives the amount of wood consumed by the mills of this State, in 1907, as 990,666 cords, of which 46 per cent. was imported from Canada. The imported wood was shipped from along the lines of the Intercolonial, Quebec Central, Grand Trunk, Canadian Pacific and Quebec & Lake St. John railroads. As a noteworthy fact, the bulk of this wood came from that part of Canada known as the Eastern Townships. During the season of navigation, a large amount is shipped from Canada to the mills of the Hudson river district, in canal boats. This comes by way of the Richelieu river and canal, Lake Champlain and Whitehall, N.Y. The mills of Pennsylvania, Maryland, the Virginias and Carolinas, have an aggregate daily capacity of 1,290 tons of wood pulp. The approximate total is 9,500 tons for the entire country. Hemlock, basswood, sweetgum, white and yellow poplar, cottonwood, etc., represent the bulk of the wood used in these mills, which is largely made into chemical fibre or, in other words, soda and sulphite pulps.

Twenty-one different kinds of wood are reported as being used for pulp. As a matter of fact, when we take out the spruce, hemlock, pine, balsam, poplar, cottonwood and fir, the rest forms an unimportant total. New York reports the highest price per cord for wood delivered at mill, \$9.11. The lowest price, \$6.90, is credited to Pennsylvania.

A cord of wood (or reported to the Forest Service) reduced by the mechanical process, produces from 1,500 to 2,400 pounds of pulp, with an average of 2,000 pounds. Where the chemical process is employed, from 900 to 1,200 pounds of pulp per cord is the amount generally reported. The price per cord, as reported to the Forest Service, cannot be applied to any individual firm. For instance, local prices in this part of the State, for unpeeled wood, are as follows: The Malone Paper Company pay \$5 per cord for hemlock and balsam, \$5.50 for spruce, hemlock and balsam mixed, and for a good quality of spruce, \$6. The Remington-Martin Company, of Norfolk, N.Y., have paid \$6.25 for unpeeled spruce,

Evans Company Limited—Rear of Office Showing Railway Facilities.

f.o.b. at St. Regis Falls. The local price for peeled poplars is \$6.50 per cord. Local prices for rossed wood (spruce, hemlock and balsam) range from \$9.50 to \$10.50 at point of shipment. Rossed wood from Canada in carload lots, usually brings from \$12 to \$14 per cord at point of delivery. This is for a good quality of spruce. It is apparent from the foregoing that \$9.11, the average for the State, is the average for local supplies and rossed imported wood.

George B. Oberton,
North Bangor, N.Y.

Imitation of Fine Woods by Graining.

The art of imitating fine woods by graining, or the application of paint and use of tools, had its origin at a very early period. It has been practised in Great Britain for at least two centuries, possibly longer. It is reasonable to suppose that artisans recognized the need for a cheaper form of the natural-finished hardwood, and saw how it might be accomplished with paint or stain.

The most difficult wood to imitate by graining is oak, and at the same time no wood is more worthy of faithful imitation, well repaying the time and labor spent upon its reproduction. It has been said that a well-executed example of oak graining is in appearance equal, and in many instances superior, to the natural wood. This is because the grainer may use only the finest natural wood effects in his work, whereas the woodworker may and too often does use inferior pieces, putting together pieces that fail to harmonize together, and which often lack beauty. On cheap work this may be pardonable, but it is not infrequently seen on more expensive work. Given a door to make, or a piece of furniture to make, if the worker will carefully select his wood, and place together only those pieces which will agree in color and grain he will produce a much better looking job. Very often the stainer covers up the bad work of the careless workman, or who may not have been careless at all but simply following instructions from his superior.

Mr. John Sutton, sr., of Windsor, Ont., will shortly commence cutting cedar at Kearney, Ont.

B.C. Timber and Forestry Commission

Opening Session at Victoria and Vancouver—Important Deliberations of Interest to Lumbermen—The Question of Timber Leases—Afforestation Methods—Expert Evidence and Opinions

A great deal is hoped for by lumbermen and others from the deliberations of the Provincial Timber & Forestry Commission, which held its first session at Victoria on August 16th. The Commission comprises Hon. F. J. Fulton, chairman; Mr. A. S. Goodeve, M.P., Rossland, and Mr. A. C. Flumerfelt, a leading citizen of Victoria. The objects of the Commission are as follows: To cause inquiry to be made into and concerning the timber resources of the province, the preservation of forests, the prevention of forest fires, the utilization of timber areas, afforestation, and the diversification of tree growing, and generally all matters connected with the timber resources of the province.

The itinerary arranged provides for meetings at the following places on the dates mentioned: Victoria, August 16, 17 and 18; Nanaimo, Aug. 19; Vancouver, Aug. 23, 24 and 25; Seattle, Aug. 26, 27 and 28; Kamloops, Sept. 7; Vernon, Sept. 8 and 9; Revelstoke, Sept. 10 and 11; Nelson, Sept. 13; Cranbrook, Sept. 14 and 15; Fernie, Sept. 16; Grand Forks, Sept. 18. A session will also be held at New Westminster on a date to be appointed, and it is likely that a second meeting of the Commission will also be held at Vancouver.

At the opening session at Victoria, Mr. W. A. Anstie, of Nelson, B.C., secretary of the Mountain Lumbermen's Association, presented the case on behalf of that section, and said his statements would be borne out by witnesses to be heard. It was most desirable that leases should be in perpetuity, otherwise only the best timber would be cut and fire would sweep the rest. He believed the owners of limits would be willing to defray half the cost of an adequate system of fire protection.

Prof. Craig, of Cornell University, gave evidence on reforestation. He favored the German system of clearing away old timber entirely and planting young trees. Only a few years ago the United States grant for forestry work was only \$30,000, while last year \$3,000,000 was voted.

Mr. M. Carlin, a prominent Vancouver Island lumberman, thought leases should be perpetual in order to keep lumbermen here. If fire were kept out of the limits the land would reforest.

Mr. Solly, of the E. T. N. Railway Company, Victoria, favored perpetuity of rights, but thought it would be best to burn off debris before reforestation.

Mr. Flumerfelt put a series of questions as to the increase of markets and the effect of the new United States tariff. Mr. Anstie considered the natural markets within the reach of the British Columbia mills were likely to increase in the immediate future. The change in United States duty would have very little effect on the British Columbia timber cut, but it would retard the production of shingles for some time at least. Mr. Anstie did not think that as much as ten per cent. of the timber lands of the province would be suitable for agriculture if cleared off.

The principal witness at the second day's session was Mr. M. J. Scanlon, of Minneapolis, whose company hold under license large tracts of timberlands in the province. Mr. Scanlon said he had given much attention to the matter of conservation of timber, but he had not found a solution satisfactory to himself or his partners. He did not think anything could be done in the province beyond preventing fires, and he was satisfied that in this precautionary measure every lumberman was willing to co-operate with the Government, bearing half the expense. The Dominion leases, he said, were looked upon more favorably than provincial, because in the case of the Dominion it was thought rentals or royalties were not likely to be raised. Mr. Scanlon was asked if he were afraid to invest in British Columbia timber. He stated emphatically that he was not—that he considered his company's timber investments in the province as excellent investments.

Mr. Fulton pointed out that the Dominion regulations were similar to the provincial, inasmuch as the Dominion leases were renewable yearly, and the royalty was subject to change.

Mr. Scanlon stuck to his statement that Dominion leases were favored over provincial, and the banks preferred them, as the Dominion regulations had never changed. Mr. Scanlon agreed that the prohibition of exporting logs was right, as Canadian timber should be manufactured in Canada.

Michael Carlin, another witness, said that if leases were made perpetual it would be beneficial, as owners would be careful to protect their limits as far as possible from fire. Mr. Carlin said that of the timberland in the interior only twenty per cent. was available for agriculture, and this should be carefully preserved. After the first cutting the timber land was good, because it would develop a standing forest again. He said he had taken a second lot of timber in this way from Kicking Horse Canyon, in ten years. Timber could be grown after a first and second cutting, but fires must be held in check, was Mr. Carlin's opinion.

Leonard Solly, of the E. & N. Railway Company, testified at the

third day's session that the present Fire Act was giving far more satisfaction than former acts. The wardens had more power, and campers, etc., were being educated to the danger of fires in the forests.

At the concluding session of the Commission Mr. E. McGaffey, secretary of the Vancouver Island Development League, appeared in support of a resolution of the Clayoquot Development League, asking the British Columbia Government to order that the agricultural lands within timber limits should be thrown open for settlement.

In answer to this resolution the chairman, Hon. F. J. Fulton, pointed out that all the unalienated timber in the province had been reserved since December, 1907.

Mr. McGaffey suggested that the Government should acquire reserves on Vancouver Island, and emphasized the fact that the time to conserve forests was now.

This concluded the sessions at Victoria.

The Commission resumed its deliberations at Vancouver, August 23-25. At this session the witnesses included R. J. Skinner, Provincial Timber Inspector, and the following prominent lumbermen: T. F. Paterson, Fred. L. Ward, Jas. S. Emerson, John O'Brien, W. T. Cox, W. I. Paterson, E. H. Heaps and Wm. Tytler. Further details of this meeting, together with a resume of the evidence taken, will be published in our next issue.

Importance of Accuracy in the Cutter-Head.

It goes without saying that good work on a planer depends first, last and all the time on the cutter-head, for it's the cutter-head that does the actual work; the rest of the machine merely feeds the stock to it and takes it away. An unbalanced head, poor stock in the knives, improper grinding, incorrect setting and imperfect jointing, all have a share in turning out poor work. Any one of these bad features in the cutter-head may offset all the good points in the best machine.

The ideal of the S. A. Woods Machine Company has been to make the best machine that constant study and constant improvement, the best tools, the best materials and the best workmen could produce. But more than this, they have centred attention on the cutter-head, to devise methods for giving it perfect running balance. They select the finest steel for the knives, and are making use of the high speed steels, have for years built special knife grinders to insure perfect accuracy in the knives themselves, and last of all, have devised a radial knife setting gauge to insure equal accuracy in their setting, preparatory to the final process of jointing by means of the Woods truing devices while the head is running at full speed.

Correctly set knives must have all corresponding points of the cutting edges at exactly the same distance from the centre of the head. This is true, no matter what the form of the knives or the accuracy of the cutter-head. To secure such exactness, measurement must be made from the centre of the shaft, not from the lip of the head or from some other part of the machine. By its ingenious design, the S. A. Woods Company claim that absolutely accurate setting is insured by the radial gauge which may be rotated about the shaft.

This gauge is a specially designed form of calipers. It consists essentially of two curved arms connected by a shaft. The arms hook over the journals at each end of the head. Springs, easily manipulated by the thumbs, provide quick and secure means of locking the gauge in position. Upon the shaft are two setting rollers which have a close sliding fit thereon. As the gauge is revolved about the head, this shaft remains parallel to and at the same distance from the centre of the cutter-head. As the gauge is swung about the latter shaft the rollers come in contact with the knives. In the process of setting these are lightly clamped so that they may be pushed back into position by the passing rollers. As a result all knives are set exactly the same distance from the centre and may be firmly clamped in this position.

The company claim that the proper use of this radial gauge will give a setting that is more accurate than any previously devised method, and will produce equally good results on knives with an under-bevel as on those without, regardless of the extent of the bevel, or even whether all are bevelled alike. This, they say, is a result impossible to obtain by any method of measuring from the lip of the head or from any fixed gauges attached to the head. This gauge, which is patented, is now being furnished with all of the machines manufactured by the S. A. Woods Machine Company, of Boston. Its use is preliminary to that of the Woods Truing Devices, which true the edges while the head is running, thus overcoming the effect of centrifugal force which causes distortion. The result is equality of cutting by all of the knives, which makes possible finer finish and faster feed.

Concatenated Order of Hoo - Hoo

Coming Convention at Hot Springs, Ark.—Four-day Session Attractive Programme Arranged

The eighteenth annual meeting of the Concatenated Order of Hoo-Hoo will be held at Hot Springs, Ark., September 8-11.

No special rate for the meeting has been made by the railways as there prevails all over the country the regular round-trip tourist rate to Hot Springs. In addition to this there now prevails to Hot Springs a regular summer tourist rate. The latter is slightly lower than the former and is practically a rate of one and one-third fare on basis of tariff now prevailing, without complications as to certificates, etc. The ticket on both rates is the usual form of round-trip ticket, and has only to be validated at Hot Springs before the return journey is begun.

The first rate mentioned above applies all over the country, and tickets can be bought on that rate any day in the year. It contains liberal provisions for stop-overs both ways and has a return limit of 90 days from date of purchase. Tickets on the other rate—the summer tourist rate—are on sale at practically every point in America east of the Rocky Mountains and at many points in Canada. From some sections stop-over is allowed on these tickets, which are good to return up to October 31st. Good hotel accommodation may be had at moderate rates. Following is the programme of the meeting:

Wednesday, Sept. 8—Forenoon: General reception. Afternoon: Business session Osirian Cloister; shopping tour for ladies. Evening: Osirian Cloister initiation; progressive cards and music for ladies at Arlington Hotel.

Thursday, Sept. 9—Forenoon: Business session to 11.30 a.m. Afternoon: Excursion to Gurdon, Ark., for dedication of Hoo-Hoo Memorial Tablet; train leaving Hot Springs at 12.30, and returning at 6.30 p.m. Evening: Annual concatenation at Auditorium; musicale with vaudeville features at Arlington Hotel.

Friday, Sept. 10—Forenoon: Business session. Afternoon: Business session; carriage drive for ladies through mountains. Evening: Annual banquet at Arlington for all Hoo-Hoo and invited guests.

Saturday, Sept. 11—Forenoon: Business session (election of officers) to 11.00 a.m. Afternoon: Old-fashioned Southern barbecue at Whittington Park; visit to ostrich farm and alligator farm.

The St. John River Situation.

Conditions on the St. John river were the subject of a conference held last month in St. John between Right Hon. James Bryce, British Ambassador to the United States; Lieutenant-Governor Tweedie and Premier Hazen, with a delegation composed of three prominent lumbermen of the city. The members of the delegation were J. Fraser Gregory, president of the St. John River Log Driving Company; Henry Hilyard and Alexander Wilson, of A. Cushing & Company, representing the American and Canadian millowners of St. John. Mr. Wilson, speaking of the conference after it was over, described it as a very pleasant one. His excellency did not commit himself in any way but seemed impressed with the manner in which the delegates, assisted by Lieut.-Governor Tweedie and Premier Hazen, presented the Canadian case under the Ashburton treaty. He assured them that his previous knowledge of the matters in dispute had been largely supplemented by the information they were able to present.

Mr. Gregory opened the discussion. He contended that in consequence of the works of the St. John Lumber Company at Van Buren, the cost of log driving to Fredericton had increased 100 per cent. He had a large map of the St. John river, with the aid of which he explained the situation to his excellency. The alleged unfairness of the company holding up 140,000,000 feet of logs destined for points further down the river in order to sort out 40,000,000 feet of their own lumber was what Mr. Gregory principally complained of.

Mr. Bryce at this point asked what course, if any, Mr. Gregory could suggest as a means to settle the difficulty, having respect to the rights of all parties. Mr. Gregory suggested that a thoroughly independent man be appointed to sort the logs at Van Buren, which he contended should no longer be left in the hands of the St. John Lumber Company.

The other delegates, however, with Premier Hazen and Lieutenant-Governor Tweedie, opposed this expedient. They pointed out that the interests were too unequal and insisted that the provisions of the Ashburton treaty be carried out in their entirety. Under that agreement the St. John river was to remain free and unobstructed forever. It was, they thought, simply a case of vested rights against legal rights and they held the Canadian Government should uphold the rights of the St. John mill owners and the lumbermen along the river. The St. John Lumber Company, they continued, could not justly complain of what might be done because they ought to have made full investigation before building. Even on the basis of vested rights, they contended, the interests of the mill owners in St. John were more valuable than those at Van Buren. In

this city \$1,250,000 had been invested in mill plants and there is a yearly pay roll of \$50,000. The great hardship that would be inflicted if any part of this were rendered useless was self-evident.

Mr. Wilson said his excellency asked many questions and showed a comprehensive grasp of the matters under discussion. While he was careful not to commit himself, he thought he was impressed with the idea that the legal rights in the dispute were entirely with the Canadians. Speaking of the personnel of the international commission now inquiring into conditions on the river, he expressed his surprise that a fifth member had not been appointed who would be independent of either interest and avert a deadlock.

125,000,000 feet will be rafted at Fredericton, N. B.

J. Fraser Gregory, president of the St. John River Log Driving Company, St. John, N.B., speaking of the rafting and work at the booms this year, said that it had been a most successful season and that owing to the large amount of work and the favorable conditions the work had been carried on at a smaller cost than last year. The log owners would be assessed the same charges so as to pay for the damage to the booms last winter at the time of the midwinter freshet, when booms that cost \$20,000 were destroyed in a few minutes at the Nashwaaksis. Mr. Gregory said the amount of logs coming to the booms was about 10,000,000 short of the estimate of 135,000 feet made last spring, and this was due, he thought, to operators not making a thorough clean-up on the brooks. The last corporation drive of the season was now nearing the booms. In the rear there was about 2,000,000 feet. Rafting operations would be completed shortly. Speaking of logs which had been hung up, Mr. Gregory said that in a lot of logs cut by Cunliffe Bros. for manufacture at St. John there had been about 1,500,000 feet that got into the St. John Lumber Company's boom at Grand Isle and had not yet come out.

To Prevent Moulder Knives from Burning.

Some have trouble with moulder knives burning. I am using two inside moulders on kiln-dried oak and maple, and have no trouble with the knives burning, cutting all the way from $\frac{1}{8}$ to $1\frac{1}{4}$ inches deep, says a writer in an exchange. I find that I cannot use a knife that is soft enough to file; if I do, it burns. I temper knives in clear water and make them considerably harder than I want them, then draw them to a light straw color.

I grind my knives a little bevel on the edge, so that they will be sure to clear and give a free cut. Have never found a man that could step on my toes in the line of tempering small knives up to 5 x 5—never tried it on larger ones. There is no secret about the matter. I never use oil to temper in, for I could never get a knife so hard but what I could file it, though perhaps it can be done. I use clear, cold water, and have it free from soap. Soft water is best if one can get it. Have water enough so you can keep it the same heat until you get the job done. I have made tempering a life study, and find there is lots to learn yet. There is as much in heating a knife as in tempering. Some steel will stand lots more heat than others. Some will not stand a red heat, while others will stand almost white heat. One has to be acquainted with the different grades of steel to know how to get the best results.

Harvesting of Crops Influences Business.

With the harvesting of farm products worth more than \$157,000,000, the last lingering doubt as to the business future should be dispelled. The past two years have certainly been lean ones but the moving of crops, of greater value than ever before, should start a rush of business in all lines of greater volume even than that of 1907. There is no question but that the period of industrial depression has been prolonged by the timidity of all prospective buyers. This developed into months of hand-to-mouth business in all lines, a condition of affairs which made it impossible for a man to part with a dollar except for his absolute and immediate necessities. All that was needed to put the required backbone into trade was some big natural force that would convince all business men, in spite of themselves, of the return of prosperity. This has come with the harvesting of the crops and we now can say that this is certainly a year of plenty.

S. P. Musson, Son & Company, Barbados, report under date of Aug. 21: Lumberstuffs—White pine—Since our last the schooner "Kestrel," from Shelburne, N.S., has arrived to our address with about 80m. feet, which we sold to arrive at \$29.67 and \$21.67 for merchantable and second quality respectively. Dealers' stocks are running low, and next receipts should do well. Spruce—The "Kestrel" also brought a small lot of 15m. which we placed at \$21.67. Pitch pine—No arrivals and stocks in dealers' yards are not heavy. Shingles—The "Bravo," from Gaspé to selves, brought some 825,000 cedar laying, which we sold at \$1.92 per m., but the other expected cargoes have not yet run in. Shooks—We note arrival of 850 bbls. transhipped from St. Vincent, and purchased to arrive by dealers. Wood hoops—No receipts; no enquiry.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

Jeffrey Storage Battery Truck.

The accompanying illustration shows a new yard truck just brought out by the Jeffrey Manufacturing Company, of Columbus, Ohio. The electrical equipment, including storage batteries, motor, controller, with all necessary charging instruments, are all located below the platform, so that the truck can be used for carrying material of any kind, or for hauling yard cars. The design is such that it can be used on any gauge

Storage Battery Truck manufactured by the Jeffrey Mfg. Co., Columbus, Ohio.

from 10-inch up, and on the shortest curves encountered on industrial tracks. The electrical equipment is furnished in sizes to suit the service.

For loads up to ten tons a 6-h.p. motor with 10-k.w. battery is provided. The platform is made removable, allowing easy access to the electrical equipment. For the service usually encountered around the average sawmill or woodworking plant, moving lumber, finished products, etc., the 6-h.p. equipment is provided. For heavier service larger motors and batteries are supplied, depending on the maximum loads and the frequency of the trips. The platform will operate two or three days on a charge.

By estimating the average weight and average length of trip the proper size equipment can be determined. The use of these cars facilitates the handling of material around a sawmill or woodworking plant, and also effects a great saving in the cost of this work.

The Dunbar Shingle Machine.

Messrs. Alex. Dunbar & Sons' Company, Limited, of Woodstock, N.B., have issued an interesting circular explaining the merits of the "Dunbar" shingle machine, a cut of which is reproduced herewith. Mr. Dunbar, sr., of this firm, was the inventor of the original machine bearing his name. It was patented in 1885, and the firm state that many

"Dunbar" Shingle Machine.

valuable improvements have been made as suggested by experience. Some of the leading features of the "Dunbar" are as follows: The main arbor is of polished steel three inches in diameter, running in very long self-oiling boxes. The jointer arbor is also of polished steel two and a quarter inches in diameter, and has enlarged collars. The jointer table has an improved joint by which it is held very firm and is easily operated and adjusted. The table and joint is made so that it can be easily swung out of the way when changing saws. The set rolls are made

double ended so that they may be changed when worn, thus prolonging the use of these. The slab catchers are steel and fitted close, so as to prevent waste of lumber. The machine weighs about 2,500 pounds. It will take blocks from 15 inches to 20 inches, but can be made of larger capacity if desired.

Snow Ploughs in the Winter Camps.

The development of the lumber industry has been so rapid in Canada during the last few years that competition is becoming very keen. The company with modern equipment is possessed of a splendid advantage in the race for business. At this time of year equipment for the winter camp is being considered, and snow ploughs are a most important factor in the equipment of every camp. There is no more important essential in the marketing of lumber than that the roads from the forest to the river or to points of shipment be as good as they can be made. There is many a slip 'twixt the cup and the lip, and likewise there is many a slip 'twixt the forest and the mill. The cost of woods work may be greatly increased by inattention to the matter of securing good roads. As the loads of to-day are of great size and weight, the roads are called upon to withstand wear which would tear up any but the best. If a load of logs breaks down or becomes stuck on the road in any manner, the loss to the company is large. The loss of time through the idleness of the team and the men is great, and with a number of breakdowns the season's operations may even be rendered unprofitable. Not simply as a

Wilkinson Snow Plough.

saving of loss, however, but as an actual economic factor in the getting out of the logs, the roads are to be considered in the same light as any other equipment of a camp.

How to provide good winter roads is often a serious problem. With a favorable season, having a fair amount of snow and a favorable average temperature, good roads will sometimes be easy to secure. But experienced woodsmen know that nothing is less certain than the occurrence of proper conditions for road making. Snow ploughs have come to occupy an important place in camp equipment. They eliminate practically every uncertainty. So long as the snow is there, a good snow plough will provide the roads. Of snow ploughs there are many, but one of the best is the Wilkinson snow plough, made by the Wilkinson Plough Company, Limited, Toronto. An illustration of their combination model lumberman's snow plough is shown herewith. The company guarantee this plough fully, and all their other goods also. The firm itself is too well known in Canada to need any introduction to readers of the "Canada Lumberman." They will be pleased to furnish information regarding their goods to any who will write them. Catalogues may be had also by writing or making application to the company. Readers will be interested in noting the company's advertisement on page — of this issue.

A revolution in the dressing of lumber has been wrought by the introduction of truing devices that joint the knives while running, thereby overcoming the distortion due to centrifugal force, insuring finer finish by closer spacing of the knife marks and making possible higher rates of feed.

J. Hanbury, of Brandon, president of the Hanbury & North Star Lumber Companies, and C. E. Ayre, manager of the Elko mill, were in Fernie recently. Mrs. Hanbury, her sister-in-law and three children, are rusticated for a month at Elko.

Very Best

Yellow Pine

WE are in a position to supply you with the very finest Long Leaf Yellow Pine Lumber made. We want your enquiries for

Flooring, Finishing Ceiling, Etc.

and will win your trade if quality and value count. We can also quote on strictly Long Leaf Yellow Pine Timber dressed on four sides or in the rough.

We handle genuine **Louisiana Red Cypress** from one of the best shippers in the South.

The Wood Trade of Norway.

In a recent issue of the Canadian Trade and Commerce bulletin, the following report was published upon the wood trade of Norway:

White battens are slightly weaker, whereas 3x9 red deals are in great demand, but scarce. Sales are proceeding slowly, and owing to shippers' firmness in their quotations buyers have been obliged to pay the previous prices, viz.: basis £9 7s. 6d. mixed white, and £11 7s. 6d. 1st red, c.i.f. cheap ports for July-August shipment. Australia has bought some cargoes at £8 17s. 6d. basis colonial 1st white, and £9 12s. 6d. for colonial 1st red.

Africa has been in the market for prompt, but as Sweden is now selling red planed at very low prices, these orders are principally taken by this country, as long as the Norwegians do not reduce their prices to a corresponding level. However, they do not see any necessity for doing so as the sawing of logs in Norway as well as in Sweden was delayed about three or four weeks this year owing to the very late spring and consequent delay in floating timber. As redwood must not be sawn after the middle of July in order to avoid blue, the productions for shipments this year will be reduced by at least one month's sawing as compared with previous years, which is considerable, and consequently there is no reason to reduce prices for redwood in spite of few inquiries for this kind of wood goods at present. A recent sale to London at £7 15s. for 7/8-inch by 6-inch red p.e. u/s has not affected the London market as much as the sellers intended, for other shippers kept firm quotations, refused offers of £7 17s. 6d., but accepted only £8 18s. 9d. for 6-inch and £8 8s. 9d. for 5 1/2-inch, which prices are also accepted for successive shipments. Stocks seem to be very light on shippers' side for this time of the year.

The following observations, which are the result of careful investigations and experiments made by the Norwegian Pulp Manufacturers' Association, may also interest Canadian manufacturers: The consumption of lumber for making mechanical pulp has proved to be quite different, according to the dimensions and the compactness of the structure of the raw material. Younger and smaller trees give a far smaller result than older and larger trees of firm growth, and the nature of the soil on which the trees are grown also makes some difference. In addition, the loss by barking and cleaning the surface of the trees is much larger for the small than for those of larger dimensions. This loss is calculated with hand cleaning to be about 12 1/2 per cent. for 3 1/2-inch, 10 per cent. for 5-inch, and 6 per cent. for 9-inch. With machine cleaning the loss is about twice that much.

Careful measurements have further proved that up to two metres long, 6-inch lumber, correctly laid up, gives a compact mass of wood about 75 per cent. of the loose measure, while 3 1/2-inch and 4-inch only gives 65 per cent. Through several experiments, some of which have been made in Sweden, it has been proved that to make one ton of mechanical pulp, dry, it takes about 5 1/5 cubic metres of unbarked lumber. To this must be added what is lost through floating the lumber, breakage, sinking, etc., which loss is dependent on local circumstances, the condition of the lumber, etc., amounting to some two to four per cent.

An influential deputation of paper makers of the Province of Quebec recently interviewed Premier Gouin with the object of asking the Government to suspend its new tax of 25 cents per cord on pulpwood exported from this province before being manufactured in order to give time to the Canadian manufacturers to comply with the new United States tariff. The delegation was composed of Messrs. J. R. Booth and H. R. Erskine, of the Booth Pulp Company; W. H. Rowley and Geo. Miller, of the Eddy & Sons Company; Geo. Chahoon and J. C. Acer, of the Laurentide Paper Company; H. Biernens and A. C. S. Campion, of the Belgo-Canadian Pulp Company, Carl Riordan and W. K. Trower, of the Riordan Paper Company; O. Z. A. Parritt, of the Jonquieres Pulp Company; Geo. Macdougall, of the Jacques Cartier Paper Company; F. G. Campbell, of the Canada Paper Company; R. N. Kenny, of the James McLaren Company; J. B. Rolland, of the Rolland Paper and the Northern Paper Companies; Mr. Hyde, secretary of the Canadian Wood Pulp Association. The delegates represented to the Ministers that if the new duty of 25 cents per cord on the exportation of unmanufactured pulpwood cut in the Crown forests of the Province of Quebec were remitted it would enable them to avail themselves of the new minimum tariff of the United States. As this 25 cents duty is the only one imposed by the Province of Quebec, its withdrawal would put an end to all difficulties with the American Government. The Premier promised to submit the demand to the Ministers at the next meeting of the Cabinet.

A cut of over 12,000,000 feet is reported by the different New Westminster sawmills to have been made during July. The prospect for winter is highly favorable and all the mills expect to keep running the full season. Over half of the July cut was made by the Fraser River Mills, that concern averaging 370,000 feet per day. The Royal City, Small & Bucklin and the Brunette Sawmills cut each between one and a half and two million feet. Several smaller mills in the city made fair cuts. The Fraser River Mills have received word from their representatives, Father O'Boyle and M. Thereaux, that the first body of French-Canadians, composed of about 20 families, will come this month to replace the Oriental labor now employed.

WOODWORKING MACHINERY

1 27" revolving bed, double surface planer
2 26" revolving bed, double surface planers
1 26" Goldie & McCulloch surface planer
1 refitted 24" double surface planer and matcher
2 refitted 24" double surface planers
1 new 24" planer and matcher
2 refitted 24" planers, matchers and moulders
1 refitted 24" revolving bed surface planer
1 refitted 24" surface planer complete
1 refitted 22" wood frame surface planer
1 new 18" planer and matcher
1 refitted 13" lightning planer and matcher
1 refitted 24" buzz planer with countershaft
2 new 16" buzz planers with countershafts
1 new 12" buzz planer with countershafts
1 refitted 12" buzz planer with countershaft
1 refitted 8" universal wood worker
1 refitted 10" 4 side, inside moulder
1 refitted 10" 3 side moulder
3 refitted wood frame sash stickers
1 new No. 2 foot power mortiser with chisels
1 new No. 1 foot power mortiser with chisels
1 new No. 3 Fox foot power mitre machine
2 refitted power feed, rod and dowel machines
1 new 44" Ober handle and spoke lathe
1 refitted 20" patternmakers wood lathe
1 refitted 18" wood turning lathe complete
1 new 16" wood lathe
1 refitted 12 spindle horizontal boring machine
1 refitted single spindle, horizontal car borer
1 new iron top, 2 spindle wood shaper
1 new Cowan, 2 spindle wood shaper
1 refitted power feed gang rip saw table
3 new dimension saw tables with tilting attachments
1 refitted double, rip and cross cut saw table
1 refitted Cowan saw table and dado machine
1 refitted variety saw table with countershaft
1 new wood frame swing cut off saw with table
2 new iron frame swing cut off saws
1 refitted iron frame swing cut off saw
2 nearly new roller top cordwood saw tables
1 nearly new champion hand and foot power saw table
1 refitted 54" band resawing machine
1 refitted 40" circular resawing machine
1 refitted Roger's vertical resawing machine
1 refitted 30" double drum sander with countershaft
1 refitted 24" double drum sander with countershaft
2 refitted 24" single drum sanders complete
1 refitted new 32" disc sander with boring attachment
1 refitted arm sander in good order
2 new No. 6 Lion universal wood trimmers
1 new No. 5A universal bench wood trimmer
10 new No. 4 Lion universal bench wood trimmers
1 new Champion floor scraper
1 nearly new Cowan band saw filing machine
1 refitted box board matcher with countershaft
1 refitted horizontal bracket carving machine
1 new Dominion band saw set
1 refitted hand power spoke tenoner
A copy of our supply catalogue or machinery stock list for the asking.

WANTED—EMPLOYMENT

EXPERIENCED LUMBER SHIPPER wants position to ship by thousand or on salary. Well posted Canadian and British shipments. Box 820, CANADA LUMBERMAN, Toronto. 19

YOUNG MAN, NINETEEN, WITH BUSINESS ability and experience seeks position with lumber company with view to learning business and eventually acting as salesman. Not afraid of work in yard or elsewhere. Box 819, CANADA LUMBERMAN, Toronto. 17

Wanted

POSITION WANTED BY A LUMBER Buyer and Inspector good references furnished. Box 816, CANADA LUMBERMAN, Toronto. 17

A YOUNG MAN, NOW CONNECTED AS travelling representative with one of New York's large lumber dealers desires to change to a Canadian concern. High references and record of sales for past year on hand. A good opportunity for a good firm to secure a salesman of proven ability. Box 823, CANADA LUMBERMAN, Toronto. 17

Situation Wanted

BY LUMBER ACCOUNTANT OF THIRTEEN years experience in wholesale and manufacturing offices. Past eight years in charge of office; now employed in that capacity by large pine mill and chartered railroad. Would like to make nominal investment as an item of permanency. Box 824, CANADA LUMBERMAN, Toronto. 20

WANTED—EMPLOYEES

COMPETENT SALESMAN WHO KNOWS Western Ontario trade to sell millstock—lumber, shingles, etc. State salary. Good references required. Apply Box 569, Lindsay Ont. 20

Wanted

AN EXPERIENCED BAND SAWYER FOR Ontario lumber mills, a good position for the right man. Write stating particulars to Box 825 CANADA LUMBERMAN, Toronto. 17

BUSINESS OPPORTUNITIES

For Sale

AN UP-TO-DATE SAW MILL ON LAKE Nipissing, with timber range, scows and alligators complete. For full particulars apply to DRAWER B, Sturgeon Falls, Ont. 18

SHINGLE MILL FOR SALE IN NELSON, B. C., capacity 25 M. Price \$3,600, time if desired, \$500 extra will double capacity. Mild climate. Profit 70 cents per M. Address P. O. Box 91, Nelson, B.C. 17

Jobbers Wanted

TO LOG FIVE TO FIFTEEN MILES FROM Bannerman Siding, C. P. R. Large or small blocks. Rigging supplied if necessary. Apply THE NORTHERN TIMBER CO., LIMITED, Markstay, Ont. 18

For Sale

A STEAM SCREW STEAMER, HAVING daily mail, passenger and freight route on Lake Nipissing; with scows, wharfs, store-houses coal sheds, blacksmith shop, and ship yard. For particulars apply to DRAWER B, Sturgeon Falls Ont. 18

For Sale

PRACTICALLY NEW MILL, WELL equipped, capacity 15,000 feet per day, considerable timber with it. About eight miles from railway station, Parry Sound district. Practically level roads in winter. Apply to THOMAS GRIFFIN Esq. GUELPH ONT. 17

For Sale

COMPLETE LUMBERING EQUIPMENT including new sawmill, capacity 25,000 feet per day, limits and lots, ten good houses, nine-acre mill site, logging and camp outfit etc. Located at Kearney, Ontario on G. T. R. with switch to mill and yards. Full particulars on application to W. WILY, 48 Elgin Ave. Toronto. 18

For Sale

Good Business Chance

PORTABLE SAWMILL IN GOOD SHAPE, latest improved, with 25 h.p. Engine, cable feed friction set works, inserted tooth saw, double edger slab saw, trucks, wagon, sleighs, also quantity of timber in the yard, also 50 acres of good clay loam, good building. Bargain. Will sell together or separate. For particulars apply to Box 563 Newmarket, Ont. 17

MISCELLANEOUS

Sale of Timber and Tie Berths

NOTICE IS HEREBY GIVEN THAT CERTAIN timber and tie berths situated in the Districts of Algoma, Sudbury, Thunder Bay, Kenora and Rainy River in the Province of Ontario will be offered sale by public tender on Wednesday the Fifteenth day of September next. For descriptions, plans and conditions of sale apply to the undersigned or to the Crown Timber Agents for the above Districts.

F. COCHRANE,

Minister.

Department of Lands, Forests and Mines,
Toronto, July 15th, 1909. 17

SALE OF McCormick & Moore Timber Limits

The undersigned are instructed to sell by Public Auction, as one Parcel or separately to suit purchasers, at the Russell House, Ottawa, on

**September 30th, 1909,
at 2.30 p. m.**

the following Timber Limits situate in Block A, Upper Ottawa, Province of Quebec, viz:

Parcel 1. N. $\frac{1}{2}$ Lot No. 8, Range 4, Block A, Upper Ottawa, Que., 25 square miles.

Parcel 2. S. $\frac{1}{2}$ Lot No. 8, Range 4, Block A, Upper Ottawa, Que., 25 square miles.

These limits are surveyed and are easy of access—the Ottawa River and Branches traversing both limits.

Terms 10% of the purchase money to be paid down at the time of sale, and the balance in equal instalments at One (1), Three (3), and Six (6) months thereafter with interest at the rate of five per cent. per annum.

For further particulars and conditions of sale apply to The Royal Trust Company (Ottawa Branch), and to Code & Burrill, Solicitors, Carleton Chambers, Ottawa.

Dated this 7th day of July, A.D. 1909.

THE ROYAL TRUST COMPANY,
Trustees for Sale.

18

A QUANTITY OF PINE AND SPRUCE timber situated in the Mississauga Forest Reserve, in the District of Algoma, having been partially damaged by fire, tenders are hereby invited for the right to cut said timber. The timber is tributary to the Sable River and the west branch of the Spanish River, and lies north of Townships 125 and 132, as shown on plan of the north shore of Lake Huron. Tenders will be received up to Wednesday, the 15th day of September next. For descriptions, plans, particulars, etc., apply to the undersigned, or to the Crown Timber Agents at Sudbury and Webbwood.

F. COCHRANE,
Minister.

Department of Lands, Forests and Mines,
Toronto, Aug. 5, 1909.

Sale of Valuable Timber Limits

**Andrew MacCormack Estate and
Other Interests**

THE UNDERSIGNED ARE INSTRUCTED to sell by Public Auction en bloc, at the Russell House, Ottawa, on September 30, 1909, at 2.30 p. m., the following Timber Limits situate in Block A, Upper Ottawa, Province of Quebec, viz:

Berth 676 Licence No. 580 of 1908-09, south half, Lot 16, Range 4, Block A, 25 square miles; Berth 677, Licence No. 581 of 1908-09, south half Lot 14, Range 3, Block A, 21 $\frac{1}{4}$ square miles; Berth 611, Licence No. 582 of 1908-09, Grand Lac Victoria, River Ottawa, 19 square miles; Berth 678, Licence No. 583 of 1908-09, south half of north half Lot 16, Range 4, Block A, 9 $\frac{1}{2}$ square miles; Berth 679, Licence No. 584 of 1908-09, north half Lot 16, Range 3, Block A, 15 $\frac{1}{2}$ square miles; Berth 680, Licence No. 585 of 1908-09, north half Lot 15, Range 3, Block A, 18 square miles; Berth 681, Licence No. 586 of 1908-09, south half Lot 17, Range 5, Block A, 25 square miles; Berth 682 Licence No. 587 of 1908-09, north half Lot 16, Range 5, Block A, 25 square miles; Berth 696, Licence No. 588 of 1908-09, north half Lot 17, Range 4, Block A, 25 square miles.

Total 183 $\frac{3}{4}$ square miles.

These limits are all surveyed and are easy of access by a good roadway from Ville Marie to their location. They comprise some of the best pine and pulp wood areas in the Province.

The Trustee reserves the right if the Reserve Bid is not reached, to offer the berths separately.

Terms—10 per cent. of the purchase money to be paid down at the time of sale, and the balance in equal instalments at one (1), three (3) and six (6) months thereafter with interest at the rate of 5 per cent. per annum.

For further particulars and conditions of sale apply to The Royal Trust Company (Ottawa Branch), and to Code & Burrill, Solicitors, Carleton Chambers, Ottawa.

Dated this 31st day of March, 1909.

THE ROYAL TRUST CO., Ottawa,
Trustees of Sale.

18

Limit For Sale
30,000,000 FEET SPRUCE AND JACK Pine, good quality, 130 miles west of Edmonton on Macleod River and G. T. P. Splendid proposition—move quick, snap—wire or write 359 Cumberland Ave., Winnipeg.

Timber Resources

THE BOARD OF TRADE OF THE TOWN of Haileybury is willing to assist investors in white and red pine and pulp in getting in touch with the owners of timber on the Upper Ottawa and supply information relative thereto.

Haileybury, on navigable Lake Temiskaming, with competitive shipping rates, is destined to become the milling site of Northern New Ontario where consumption exceeds the manufactured product today. CYRIL T. YOUNG, Chairman Publicity Department, Board of Trade, Haileybury, Ont.

17

By Public Auction

Valuable Pine Timber Berth North Shore Lake Huron

Auction sale of the license to cut the timber on the south-east quarter of the

Township of Foster (9 square miles) more or less

on THURSDAY, OCTOBER 7th, 1909,
at 3 o'clock p. m. at the QUEEN'S
HOTEL, Toronto.

TERMS—One half cash; balance in nine months with interest at 6 per annum.

For further particulars and Maps apply to MILLAR, FERGUSON & HUNTER, Barristers, Toronto.

This berth has only been operated one season and is well timbered with pine and other merchantable woods. It can be cheaply lumbered and the logs driven down the White Fish River. The timber is sound and subject to Crown Dues of one dollar per thousand B. M. for pine. The license has no time limit and includes the right to cut all timbers on the berth which can be easily reached from Nairn Centre station on the Soo Branch of the C. P. R. or from Little Current by boat.

19

Timber, Lands and Saw Mills for Sale

The UNDERSIGNED Offers:—

Parcel 1. Ste. Anne des Monts property situated on the South Shore of the St. Lawrence River, Gaspé County, Quebec, about 1000 acres of Seignior or Fee Simple lands—at the mouth of the Ste. Anne des Monts upon which is located a well equipped lumber and shingle Mill with ample steam power, electric lighting, with a capacity of 25,000 feet of Lumber and 125,000 to 150,000 pieces of Shingles each ten hours—also Dwellings for workmen, Stable, Store houses, Repair Shops and Mill Pond and storage facilities for logs.

About 300 square miles of licensed timber lands upon which disinterested Explorers make a minimum estimate of over 350 Million feet of saw logs, principally spruce, fir and cedar, and 595,000 cords of Spoolwood, and Pulpwood.

All on drivable streams an average of not over 30 miles to Mill Pond.

And all shanty plant tools and equipment on the property.

Parcel 2. What logs are now in the river estimated 3 Million feet board measure.

Parcel 3. Grande Vallée property situated about sixty miles east of Ste. Anne des Monts on the South Shore of the St. Lawrence River in the County of Gaspé, Quebec.

About 54 square miles of Seignior or Fee Simple lands and 100 square miles of Licensed lands.

A new Mill consisting of a steam feed Circular saws—Mershon Horizontal resaw—with all subsidiary Machinery and ample steam power and electric lighting.

Capacity 50,000 to 75,000 feet of Lumber each ten hours—A practically new Mill for sawing shingles and railway ties.

With ample steam power and electric lighting to produce 125,000 to 150,000 shingles each ten hours.

All the shanty plants, tools and equipment on the property.

On the timber lands, disinterested Explorers minimum reports are 100 Million feet saw logs, principally spruce, fir and cedar and two hundred and forty five thousand cords Pulp and Spool Wood.

For further particulars, address,

G. A. MILLINER,
Deseronto,
Ont.

24

Limits for Sale

FOR SALE, 800 ACRES TIMBER LANDS IN Muskoka, mostly in Hemlock, convenient to railway. Apply Box 802, CANADA LUMBERMAN, Toronto.

17

Timber Limits For Sale

IN THE PROVINCE OF MANITOBA, 84 square miles of standing timber, adjoining Lake Winnipeg. These limits are comprised principally of Spruce and Tamarac suitable for marketable lumber, railway ties and poles. In connection with these will be sold a well equipped mill, steamer and two barges. For terms apply to

H. P. MACMAHON, Traders Bank Chambers,
Winnipeg, Man.

17

Wood Preservation.

The United States Government has gone into the study of every phase of wood preservation and as progress is made in new experiments, important facts are brought to light to which heretofore has been given little or no attention. One of the features in the work of wood preservation which has been neglected is the effect of patches of inner bark on wood in preventing proper penetration of preservatives.

Before timber is subjected to preservative treatment, it is customary to remove the bark. Unless this is done very thoroughly, however, patches of the inner bark will remain on the wood. This thin inner bark or skin adheres very closely, and is difficult to remove without the use of a drawing-knife, unless the timber is cut when the "sap is going up."

Until recently, it does not seem to have been realized that this bark presented a very effectual hindrance to the penetration of creosote. In conducting some tests on the treatment of pine in Alabama and Louisiana, in 1907 and 1908, it was noticed by a representative of the Forest Service that very little or no creosote entered the wood through even the thinnest layer of adhering bark.

The same thing was discovered by the management of one of the large creosoting companies in the South, and steps were immediately taken to see that every particle of bark was removed from piling and other timbers. While it is probable that the bark of all species is not as resistant as that of pine, it is not known how the different species rank in this respect.

In the creosote treatment of timbers, it is rarely that the entire stick is penetrated by the preservative. The value of the treatment consists largely in the creating of an exterior antiseptic zone around the untreated interior portion. If this outer zone be broken, the value of the treatment is to a large extent lost.

In the case of piling, the effect of any small portion of untreated wood extending from the outer surface to the interior of the pile is especially injurious, because of the manner in which teredos work. The teredo enters the wood when

small, making but a tiny hole, perhaps no larger than a pinhead. As they grow, they increase the size of their borings, and if present in large numbers, they will very quickly so riddle and weaken a pile, that it will break off with a very slight strain. Access to the interior of a treated pile might readily be gained through small untreated portions of the outer surface of the wood, which, because of bark adhering at time of treatment, absorbed no preservative, with the result that all of the interior untreated portion would be riddled, leaving only the exterior creosoted shell sound. It is probable that many of the failures of creosoted piling are due to this cause.

With other forms of timber, the effect may not be so quickly seen or so disastrous, but in a similar manner decay may extend to the interior through any untreated portions communicating with the interior.

Veneer in the United States.

During the year 1908, there were cut into veneer in the United States 382,542,000 feet b. m. of logs, valued at \$7,891,000, as against 348,523,000 feet, valued at \$6,436,000, in 1907, according to statistics just published by the Bureau of the Census in co-operation with the United States Forest Service. Although industrial conditions generally were unfavorable during the year 1908, the amount of wood cut into veneer increased, substantial gains being made in the quantity of both imported and domestic wood consumed. This was due in a measure to the closer canvass in 1908, when returns were received from 402 active establishments located in 34 States, as against 370 in 31 States, for the preceding year.

Red gum, as in the preceding year, ranked first among the woods used for veneer, 119,945 feet being consumed, with a valuation of \$1,272,096, forming a percentage of 31.4 of the total consumption. The demand for red gum was even greater than in 1907, when its percentage of the whole consumption was 29.3. Among other woods, with the exception of yellow pine, which shows an important increase, no great increase is noted. The principal woods imported for the industry were mahogany and Spanish cedar. Of the former 11,487 feet were used, with a valuation of \$1,478,364, as against 8,722 feet, with a valuation of \$839,695, in 1907.

When there is a broken stave in a barrel it means not only the loss of a stave, but expense in the way of re-coopering that sometimes amounts to more than two or three staves. So, it is cheaper to buy better staves or take more pains in selecting or coopering, whichever may be necessary to guard against the breaking.

Review of Current Trade Conditions

Ontario

The settlement of the American tariff question has had a stimulating effect upon the lumber trade in Ontario. A good quantity of white pine is moving to American ports, with prices from \$2 to \$5 per thousand better than at this time last year. Present indications favor a further advance. In making a comparison of present conditions with those of last year a noteworthy difference is in evidence, inasmuch as the American lumberman is now visiting all the lumber producing sections of the Georgian Bay, and inland mills as well, looking for different lines and picking up quickly everything that is suitable, whereas last year at this time he appeared to have lost his buying appetite. There are a few lines of white pine particularly strong, namely, 1 x 12, 1 x 10, 1 x 6, and 1 x 4; also 5-4 and 6-4 mill run in all widths. Shop lumber also has shown marked improvement. Lath appears to be pretty well contracted for by all the mills in Georgian Bay and vicinity. Prices at which lath have been selling are considerably in advance of last year's highest prices. Hemlock lath is also strong.

Holders of hemlock are adhering firmly to their prices. During the early spring months hemlock was very weak and sales were made at prices below the cost of production. Now, quite a number of mills that have other kinds of timber to cut, have turned their attention to manufacturing it, and are holding their hemlock in reserve until the market shows a profit. Lumber manufacturers anticipate a marked advance in the price of hemlock lumber this fall, and consider the visible supply far short of the probable demand. British Columbia shingles are weak. Since the added duty of 20 cents per thousand was put on, many manufacturers have started cars in transit to the Ontario markets, which was already well supplied. As a result, many cars are being offered at greatly reduced prices. There have been no features in the hardwood market worth recording since the publication of our last issue, the quotations of which still hold good. There is little movement in birch and soft elm. Basswood is moving freely but with no change in price. Oak is firm and likely to advance.

Ottawa manufacturers forecast a dearth of good lumber in the Ottawa valley this autumn if the present activity continues. The Ottawa market records an upward tendency in the prices of good strips, lath and some lines of shipping culls. One-inch white pine good strips are in demand. Recent sales of one-inch stock have been made at \$38 to \$40, two-inch, \$43 to \$44. The high grades are extremely buoyant. In the dearer grades of box lumber there has been a strong movement. Low grades are expected to stiffen before the close of navigation. Good sized orders are reaching the Ottawa valley mills from Chicago and the Canadian West. The assurance of a good crop is already giving an impetus to buying.

Eastern Canada.

The new tariff on Canadian long and short lumber going to the United States is the most notable feature for the past fortnight. The new schedule will make considerable changes in some quarters. At St. John, N.B., the local price of dutiable cedar shingles is twenty cents per thousand less than before the schedule went into effect. Dutiable spruce boards will be affected to the extent of an increase of 75 cents per thousand. The increase in local value is accounted for by the diminished export fees. There has been the same old uniformity in merchantable spruce boards. Values have been pretty well maintained under fairly good shipments. Our St. John correspondent estimates the available stocks in this line at the local wharves at 1,500,000, and calculates the local value of dutiable merchantable spruce boards at \$12.75 to \$13,

f.o.b. schooner St. John. Cedar shingles remain unchanged. Dutiable "extras," \$3 per thousand, and dutiable "clears," \$2.50, f.o.b. St. John. "Second clears" are quoted at \$2.20, and "Ex. No. 1's" at \$1.20. Quotations for "English" spruce are now \$13.75 to \$14.25 per thousand on a specification containing 50 per cent. sevens and eights, 35 per cent. nines, and 15 per cent. elevens and wides, f.o.b. St. John. At Boston the spruce market has gained considerably in strength. The general sales. Some mills are confident that it will pay them to hold their stocks for a few weeks so as to obtain \$24. Prices for random are somewhat firmer. For large sizes the quotations are from \$23 to \$23.50. Narrow random is in moderate demand. Boards are selling in some cases at \$22. Prices for eastern spruce in New York hold firm, the building activity in Brooklyn and northern New Jersey keeping up a good demand. The demand for shingles at Boston is somewhat small. Canadian manufacturers have not yet advanced their low prices. In some cases, with the duty added, their quotations are lower than Boston manufacturers. Cedar "extras" are offered at \$3.65 to \$3.80. There is a much firmer undertone in lath. The price asked for 1 1/4-inch is \$4. Sales of 1 1/4-inch have price asked for 9-inch frames and under is \$23.50, with very few concessions made at \$3.65.

Great Britain.

The general trade of the country is beginning to show some improvement. In spite of the fact that August is the most favored holiday month in the old country, and in the face of the influence of the Swedish strikes, there is a gratifying indication in most markets of increased confidence. In the hardwood trade there has been the usual holiday dullness. London reports business in soft woods fairly brisk, with more interest shown at public sales. The dock stocks are much below those of previous years. This is partly due to increased overside deliveries. Stocks of pine and spruce are the lowest on record, but in spite of this fact sellers find some difficulty in placing their stocks. Canadian goods continue to come in very slowly. The north-east coast ports are doing an encouraging values generally continue firm, the demand for future deliveries is rather business.

There has been but a moderate business at Liverpool, where, though poor. The situation at this port in regard to Canadian pine deals and boards is still unaltered. The arrivals by the regular liners are to the consignment of the importing houses, who are delivering direct what is sold to arrive, and are putting into store what is left unsold. Trade at Manchester has been ebbing somewhat. Prices are steady all round. What spruce is offering shows slight advances in values. The continued depression in cotton at Manchester is not conducive to quick recovery in the lumber industry. Imports at Glasgow are lighter than usual for the time of the year. Fairly brisk deliveries are reported from recent arrivals. The improvement in the lumbering business, which has been noted in Glasgow, is attributed to the revival of Canada and the United States in advanced prices.

United States.

Reports generally indicate a steadily increasing movement of lumber. This is attributable in no small measure to the outlook for more than an average yield of wheat and corn, particularly in regard to the building grades and sizes. The grain crop of the Northwest is such that the railroads will not have cars enough to handle the business of it. In consequence there will be a heavy demand for lumber for building more equipment. It is said that during the last two weeks coast mills have received orders for 30,000,000 feet of lumber for car building purposes.

We are manufacturers of White Pine Lumber in all the different grades and thicknesses. Any length furnished, from ten feet to sixty feet.

Always ready to quote on heavy construction timber, bridge timber, ship timber, ship decking, tank stock, silo material, etc.

Cutting special bills to order is a hobby with us.

Cleveland - Sarnia Saw Mills Co., Limited

SARNIA, ONTARIO

There is a tendency for improvement in low grade stocks in sympathy with business coming in from the railroads. A good fall trade in northern pine is anticipated at Chicago, where the improved tone is maintained, with brisk shipments. An upward movement in high grade lumber is chronicled at Minneapolis in new lists issued by the manufacturers. The market is stiffening and the list prices will probably represent actual conditions soon.

Trade conditions are looking up at Buffalo, which reports prices firm in all grades. Buyers of eastern spruce at Boston, who a week or so ago found the prices demanded for eastern spruce too high for them, are now in the market for fair-sized stocks. The activity of factory trade in the East is furnishing an outlook for a variety of hardwoods. The feature of the market is the tendency of the buyers to place orders for large quantities of lumber. Both at Chicago and Minneapolis the most conservative lumbermen take a much brighter outlook in regard to hardwoods. There has been a heavy call in Chicago for No. 2 clear and better in finish. Spruce flooring is sold here at satisfactory prices. It is expected at Buffalo that the shingle trade will take new form under the additional 20-cent tariff, which will make it hard for New Brunswick to compete and put Vancouver red cedars in a tight corner.

There have been recent advances in the price of red cedar shingles at Chicago owing to the increased demand for both "clears" and "stars." The former have been selling up to \$3.42 and the latter up to \$2.84. White cedar shingles are unchanged, as are lath. There has been no excitement in the cooperage trade. Chicago reports from country points some demand at low prices for butter tub staves, headings, and hoops, otherwise conditions are unchanged.

Market Correspondence

Ottawa Valley News—Manufacturers Forecast Dearth of Lumber.

Ottawa, Aug. 26.—An upward tendency in the prices of good strips, lath and whatever sort of shipping culls happened to be scarce, marked the Ottawa lumber market in the last fortnight. One-inch white pine good strips are exceedingly rare. A buyer who had been over most of the Ottawa valley for a big quantity for export found all but one manufacturer sold out. This one asked \$10 more than the highest ruling figure of the market, so that it was apparent he did not want to sell. The recent sales of one-inch stock have been made at \$38 or \$40; two-inch, \$43 and \$44. The high grades are all extremely buoyant and whenever a run occurs on a particular brand of fine lumber the price stiffens in a few days. If the present activity continues the manufacturers assert that the autumn will witness a dearth of good lumber in the Ottawa valley.

The brisk market for the upper grades of pine has affected shipping culls and advances in prices are looked for. The rates have been steady for several months, with a weakening tendency. Already the shipping cull pine, 1-inch by 6-inch, is well sold out and the quotations advanced from \$23 to \$25 in the last few days. The same grade of pine, an inch wider, is a dollar or two in the thousand cheaper because it is not so much sought, while 1-inch by 8-inch is strong at \$24 or \$25 per thousand. The holdings of middle classes of pine are light compared with a year ago, so that prices are very likely to stiffen.

There has been a marked improvement in the movement and inquiries for box lumber following the dearer grades. Before navigation closes it is believed all the low grades that were slow in the summer will experience a quickening. The shipments by water now are retarded by some exporters declining to pay the advanced freight rates. It is understood that \$2.80 per thousand has been refused by the Inland Seamen's Union for carrying lumber, and that shippers decline to pay more. Cars are still plentiful but the rates are higher. Later on, when the western crop begins to move freely and there is a rush to get lumber away before the close of navigation, a lack of convenient and prompt transportation is expected. The Ottawa valley bills are benefiting for the first time this season from considerable orders from Chicago and the Canadian West. This trade is likely to expand rapidly, as the Ottawa manufacturers have the sort of stock needed. The bumper western crops are giving an impetus to the buying.

The settlement of the American tariff only indirectly improves the trade, the local lumbermen say, because the reduction of 75 cents is more than counteracted by an advance in freight charges. The lumber trade derives an advantage, however, from the revival of other industries.

The Upper Ottawa Improvement Company, which has charge of the drive on the Ottawa river, reports that the number of logs descending the Ottawa river is greater than last year. Still the work is well advanced and a considerable number of the river drivers have been released from work. The company used 20 tugs in its work. Exceptionally high water is the reason for the success of the drive. With the exception of some logs on the Kippewa, all the timber destined for the main stream this season has been brought to its destination. A cut of logs still on the Peta-

wawa, owned by R. & T. Ritchie, of Aylmer, will be brought only to a convenient point for handling next spring. The logs have been practically all taken out of Lake Temiskaming. One steamer is kept there for towing if the Gillies Bros. cut any pulp on an adjacent limit in the Province of Quebec. All the 1907 cut of logs are at the lower end of the river and last season's is in the head waters or farther advanced.

Lumber manufacturers have experienced no scarcity of logs, except in the case of the E. B. Eddy Company, which was obliged to tow pulp timber up stream from the mouths of the Rouge and Gatineau rivers. The company had logs enough on the Upper Ottawa, but they were blocked by the larger drives of lumbermen. But for the large storage boom built at Quyon, capable of holding 800,000 logs, the Ottawa valley lumbermen might have suffered as much from scarcity of material as some other seasons. By running the surplus logs of any firm into the reserve boom three gaps at Quyon could be worked, as to two gaps in ordinary years. Sometimes in low water only of these gaps were workable. Then lumber mill owners suffered greatly for want of logs.

Mr. G. B. Greene, manager of the Upper Ottawa Improvement Company, expects that there will be no dearth of water this season to interfere with a continuance of the present satisfactory conditions. Only a very dry fall could do harm. The Ottawa river to-day, at the foot of the Rideau locks, is ten feet six inches deep, or three feet above the depth a year ago. The river has benefited by heavy rainfall in August. The Improvement Company lost the tug "Albert" on August 23rd, through the pilot running it on a sandbar. It was at once replaced by the passenger steamer "G. B. Greene," which discontinued its regular trips for the purpose of handling logs.

Ottawa valley lumbermen ridicule the report that there was a movement among them to form a merger. The lumbermen are disposed to act independently and have little to gain from co-operation outside of the assistance given each other by means of the Canadian Lumbermen's Association.

From New Brunswick's Capital—Local Effect of New Tariff.

St. John, N.B., Aug. 25.—The fortnight in the lumber trade, while productive of few startling features, has been marked by several events of special interest.

One of the live features of the month thus far has been the local effect of the new tariff on Canadian long and short lumber going into the United States. To the American millowner, whose products (when sawn from logs cut on the American side) go in duty free, the changes will not be of importance except in cases of such small lots as might be sold in the local market for the provincial trade. But to the provincial (duty-free) products the new schedule will make considerable changes in local prices. The difference in the local price of dutiable and non-dutiable red cedar shingles, for instance, will be greater than before and it is in this line of trade that the change will be most felt in local selling and buying circles. All else being equal, the local price of dutiable cedar shingles is now 20 cents per thousand less than was the case before the new schedule went into effect.

The change will be important in relation to dutiable spruce boards to the extent of 75 cents per thousand, the export fees being that much smaller and the local value being accordingly increased.

The trade in merchantable spruce boards has been uniform and steady, but there has been little snap existing in this line of trade all through the summer. Shipments have been fairly heavy and values have been fairly well sustained all through the season. It is usual, during the hot season, for spruce boards to stock up considerably, as local people depend almost entirely upon the Boston market for disposal of this line of goods, and business in that direction during the hot months is always more or less quiet and irregular. This season has been an exception in this respect; trade in merchantable spruce boards has held its own and it has not been found necessary to make any sacrifice in values in order to do business. Local stocks have not multiplied to any important extent and are, if anything, slightly less than was the case two months ago. One and one-half millions of feet would correctly describe the available stocks of this line of goods at the local wharves. The local value of dutiable merchantable spruce boards is \$12.75 to \$13, f.o.b. schooner St. John.

Beyond the change due to the new tariff the price of cedar shingles has shown no fluctuation in any direction. Dutiable "Extras" are quoted at \$3 per thousand, and dutiable "Clears" at \$2.50, f.o.b. St. John. The local and provincial trade are taking care of practically all the "2nd clears" and "Ex. No. 1's." The prices are \$2.20 and \$1.20 respectively.

The trade in spruce deals for export to Great Britain has shown no radical improvement, although the confidence of local dealers and shippers is made manifest in a growing tendency to hold out for firmer figures. Such is a good indication of the situation in regard to this line of goods—the expectations are always toward higher values; it seems as if any probability of lower values do not enter into the calculations of any.

Local stocks of "English" spruce would aggregate to from five to five and one-quarter millions of feet. An enquirer for this line of goods would be quoted from \$13.75 to \$14.25 per thousand on a specification

containing, say 50 per cent. sevens and eights, 35 per cent. nines, and 15 per cent. elevens and wides, f.o.b. St. John.

Freight rates to the west coast Great Britain are quoted this week at 32s. 6d. per standard with a tendency toward greater firmness.

The firmness in the lath market, mentioned a fortnight ago, has fully developed and prices are from 20 cents to 25 cents per thousand higher in this line than the figures of a month ago. The local value of dutiable spruce lath at present writing is \$2.80 to \$2.90 per thousand.

Three-Wire Direct Current Generators.

When the load on the central station generators consists of both motors and incandescent lamps, as is often the case in small isolated plants, it is found advantageous to use what is known as the three-wire system. The motors may be connected to the outside wires at a voltage of 220, while the lamps may be operated at 110 volts, being connected between the neutral and the outside wires. This arrangement is especially advised when the motors are of the variable speed type, since the three-wire system offers an excellent arrangement for a two-voltage speed control.

The general design and appearance of the Western Electric three-wire generator differs little from the standard "L" design generator. The most distinct feature in the design of these machines, is a doubly wound armature which is employed for obtaining the neutral e.m.f. point. Use is made of a special balancing winding which is placed beneath the usual armature winding at the bottom of the slots. This winding is interconnected with the main armature and with a slip ring between the potentials of the two brushes. The section of the copper in the auxiliary winding is large, so that the current density is low, thereby enabling the machine to take care of very large unbalanced loads. The voltage regulation is close even under sudden or large changes in the unbalanced loads.

In order to compound for the total load on the generator under all conditions, the series field winding is divided into two parts, one-half of the coils being connected to one terminal of the armature and the other half to the other terminal; the coils on alternating poles being connected to the same side of the armature. The liability of the breaking down of the insulation is reduced to a minimum, since the coils, having the full potential of the machine between them, are not placed on the same pole. This arrangement further results in perfectly balanced magnetic and electric circuits. The neutral wire is connected to the brushes, which rest on the collector rings, electrically insulated from, but mounted at the end of the commutator. This simple construction is possible because no shifting of the neutral brushes is required no matter what amount of overload is carried.

Fire Bill for 1908—Twenty-Five Millions.

The Forestry Branch of the Interior Department at Ottawa has issued an interesting bulletin dealing with the damage caused by forest fires in Canada in 1908. The bulletin, which was prepared by H. R. McMillan, Assistant Inspector of Forest Reserves, shows that during the year 835 forest fires of serious proportions occurred in the Dominion, upward of 188,000 acres were burned over, causing the destruction of over 56,000,000 feet of timber, valued, including mills and improvements, at \$25,500,000. Twenty-one lives were lost as a result of the forest fires (all in British Columbia), and 2,404 persons were thrown out of employment. The cost of the fires to the public was nearly \$300,000. Quebec province headed the list with 250 fires, British Columbia came second with 235. In Quebec, however, the value of the timber destroyed was very slight. In British Columbia 40,000,000 feet were destroyed at a loss of \$25,000,000, or over 90 per cent. of the total loss by fire in Canada. The destruction by fire in Manitoba and Alberta was very light, but in Saskatchewan timber valued at over \$20,000 was burned. The heavy loss in British Columbia was due to the great fire in the Crow's Nest Pass country, which destroyed Fernie and entailed a heavy loss of life. A fire on Vancouver Island, it is estimated, caused the destruction of 24,000,000 feet of timber.

Dealing more particularly with the prairie provinces, the report says: "That so few fires were reported from Manitoba, Saskatchewan and Alberta last summer is no indication that the northern timber belt in these provinces entirely escaped visitation of forest fires, as might be surmised from these reports, nor is it any guarantee in the future that they will be immune from fire. The best efforts of the forestry branch have not been able so far to recover the northern timber with fire rangers so that all fires will be prevented, extinguished, or even reported. The immense areas through which the travellers may pass for a week without seeing a green tree, all bear witness to the fact that fires have always raged unchecked through the spruce and poplar timber of Canada's northland. That the timber limits of Manitoba, Saskatchewan and Alberta are comparatively small and scattered, is due, not to any condition of the soil or climate which prevent the growth of timber, but to the recurring forest fires, which have destroyed the valuable spruce forests, encouraged extensive reproduction of less valuable poplar, or, in more serious cases, destroyed the forest growth."

Lumber and Sawmill Insurance

By using the facilities of this office the COST of insurance on your LUMBER and MILL property will be MATERIALLY REDUCED without impairing the quality of your present indemnity. A SUBSTANTIAL SAVING is possible because our experience as SPECIALISTS has taught us to direct the property owner's efforts for PHYSICAL BETTERMENT of his property into the channels which will result in RATE REDUCTIONS. We have also eliminated many forms of expense, thereby SAVING to our policy holders unnecessary drains on our premium income.

EDGINGS

Ontario.

The Toronto Furniture Company will build a factory either in Toronto or some other city.

The sawmill owned by the Hocken Lumber Company at Otter Lake, Ont., was recently destroyed by fire.

The Peribonca Pulp Company, of Peribonca, Que., is rebuilding its mill, which was destroyed by fire last year.

L. Christie has completed his mills at Fort Frances. The sawmill's capacity is 35,000 feet per day, that of the planer 50,000 feet.

McArthur Bros. have their new mill installed at Fort William, and are now running full blast. The E. Long Company, of Orillia, supplied most of the machinery.

Mr. Goodmurphy, formerly with the Wilson Planing Company, Collingwood, Ont., has been given the position of foreman in the Western Manufacturing Company's mill at Regina.

The St. Lawrence Paper Mills Company is about to install machinery to handle its old magazine stock at its mill at Mille Roches, Ont. The same company may open an office in Toronto.

Zimmerman Bros.' stave factory at Tavistock, Ont., was damaged by fire, which broke out in the engine room. It was, however, got under control by the employees. The loss is covered by insurance.

Fire in the planing mill and lumber yards of George Matthews, at Fort William, entirely destroyed the mill and every foot of lumber in the yard. The loss will be in the neighborhood of \$25,000, with \$4,000 insurance.

In Stratford, Ont., a by-law to guarantee the \$25,000 bonds of the Stratford Carriage and Motor Company, which proposed to take over the premises of the Borland Carriage Company, was defeated by the ratepayers.

The ratepayers of Port Arthur, Ont., have approved a by-law granting a bonus of \$25,000 a year for ten years and a free site to the Western Dry Dock & Shipbuilding Company, who will erect a plant at a cost of \$1,000,000.

The St. Thomas Match Company, Limited, St. Thomas, Ont., capital \$100,000, has been granted a Dominion charter to make matches, brooms, woodenware, etc. A. E. Thomas and J. R. Green, of St. Thomas, are charter members.

The Madera Company, Limited, Toronto, capital \$5,000,000, has been granted a Dominion charter to manufacture and deal in logs, lumber and all articles into which wood enters. J. S. Lovell, accountant, and W. Bain, bookkeeper, are among the incorporators.

Murphy's saw and planing mill, about five miles east of Warsaw, Ont., was destroyed by fire recently. On account of the material and the lack of fire-fighting equipment the blaze made quick work of the buildings. A large quantity of lumber was also destroyed. The loss will total over \$4,000 partially covered by insurance.

A six-year forestry course will be added to the course of study at Toronto University at the coming term. Students taking the course will qualify for arts and forestry degrees simultaneously. This course is in addition to the four-year course already in existence, and is established for the purpose of creating better educated foresters. The practical work will be done hereafter in October and November of the fourth year.

The Rainy River Lumber Company expects to commence the erection of their mammoth sawmill and planer at Fort Frances shortly. The proposed mill will have a capacity of one hundred million feet per annum, and will employ over 400 men. The planer, which it is expected will run the year round, will also employ a large number of hands. The company has a capital of \$20,000,000 and owns a large amount of timber.

Recent Ontario incorporations include: Montrose Paper Mills, Limited, Toronto, Ont., incorporated, capital \$150,000; incorporators, G. H. Sedgewick, L. Davis, M. Nesbitt, A. T. Struthers and H. J. Wilson, all of Toronto. Excelsior Lumber & Development Company, Ottawa, Ont., incorporated, capital \$100,000; incorporators, J. S. Crawford, W. E. Brown, J. W. Gamble, J. J. Collins and C. W. Patton, all of Ottawa.

J. R. Booth and the Ottawa city council recently had a dispute regarding the storing of woodpiles in Dalhousie Ward, on the ground that they were a menace to property in case of fire. Mr. Booth explained to the city that he was reducing the cut of his mills every year, and would continue to do so until he got down to day sawing only, on account of the bad feeling against lumber in the city, but that it would mean a loss of \$180,000 per year in wages. Finally the council decided to retain the woodpiles.

Eastern Provinces.

The Nordin Company will build a woodworking plant at Tide Head, N.B.

The Champeaux lumber mills, on the Quebec shore, opposite Campbellton, N.B., were recently destroyed by fire at heavy loss.

The St. Louis Construction Company, Limited, Montreal, has been incorporated with a capital of \$20,000 to manufacture doors, sashes, blinds and house fixtures. Paul Demers and J. E. Berube, of St. Louis (Montreal), are incorporators.

The annual meeting of the Laurentide Pulp & Paper Company will be held at Montreal in the near future, and it is generally believed that at that time the company will increase its capital. The stock has been very strong of late, and is closely held, selling at \$128.

About 24,000 feet of lumber belonging to R. B. Bishop, and two new tenement houses were destroyed by fire at Robertson Station, Que., on the Quebec Central Railway. The loss is estimated at \$10,000. The fire is thought to have caught from boys smoking cigarettes among the lumber piles.

William Currie & Company, Limited, have sold their property at Charlo, N.B., consisting of the fine mill and property at Charlo river and the timber limits on the Charlo river to Credit Foncier Canadien, of Providence, R.I. The business will be run as formerly, Walter J. Miller, secretary-treasurer of the Wm. Currie & Company, Limited, having been chosen manager. A large mill will be erected to manufacture spruce.

NEW ORLEANS, Louisiana 421 Carondelet Street

Western Canada.

The Acorn Lumber Company, Limited, Stettler, Alta., has been incorporated. Fire did \$25,000 damage to the plant and yard of the Willbank & McPherson mill at Abbotsford.

The Mayook Lumber Company, of Mayook, B.C., had its lumber stock destroyed by fire, with a loss of about \$50,000.

The Woodworkers, Limited, have been granted a permit for the erection of a \$6,000 sash and door factory in Victoria, B.C.

The Arrow Lakes Lumber Mills, at Kamloops, B.C., have been reopened after the expenditure of \$20,000 on repairs and additions.

The Mundy Lumber Company's plant at Three Valley, B.C., was totally destroyed by fire. Loss, \$250,000. The mill is being rebuilt.

The Lamb-Watson Lumber Company has started up its mill at Kamloops, B.C., with 110 men employed. A new addition has been erected, costing \$20,000.

The B. F. Graham Lumber Company will build a 100,000 capacity sawmill on Vancouver Island in conjunction with C. L. Betterton, of Victoria, who is building a railroad in the vicinity.

The Westminster Mill Company, New Westminster, B.C., recently incorporated, will build a shingle mill and sawmill. W. A. Bailey, J. L. Batley and G. W. Beach, of Seattle, Wash., are incorporators.

Following the amalgamation of large wood, pulp and paper interests in British Columbia, it is announced that the British Canadian Company will build large new works at Quatsino and Port Mellon.

Spokane and Idaho capitalists have paid \$235,000 cash for 61 sections of timber in the Fraser river valley in Cariboo. This deal was negotiated by F. T. Cromwell, formerly of Portland, but now of Vancouver, and well known on the coast.

T. A. Wilson has been appointed manager of the Western Manufacturing Company's mill at Regina. He was for the past three years foreman in the Handbury Planing Mill at Brandon, and previous to that time was in charge of the Wilson's plant at Collingwood, Ont.

The King Lumber Company, Cranbrook, B.C., are now operating two sawmills and a large planing mill. They are under the management of M. B. King. At Yahk, 41 miles west of Cranbrook, are located the company's largest sawmills, in the centre of their timber holdings.

It is stated that a deal is pending between an American company and the Canadian Pacific Railway for the acquisition of a large tract of timber land in the Cowichan lake district. A clause of the proposed contract is that the company shall erect large mills at Cowichan bay and Cowichan lake, B.C.

The Michigan Pacific Lumber Company, Grand Rapids, Mich., who recently acquired extensive interests on the Jordan River, fifty miles west of Victoria, B.C., will erect a large lumber and shingle mill. J. W. Moore is manager; Aldebert Hankin, superintendent. The headquarters of the company are in Victoria, B.C.

An order has been placed by the Fraser River Lumber Company, New Westminster, B.C., for a 750 kilowatt steam turbine engine with a capacity of 1,000 horse-power, which will be directly connected with a dynamo to be used for lighting the entire plant. This will be the first engine of this type to be installed in that province.

The Forestry Commission, consisting of F. J. Fulton, Chief Commissioner of Lands; A. C. Flumerfelt and A. S. Goodeve, will hold its sittings as follows: Victoria, August 16, 17 and 18; Nanaimo, August 19; Vancouver, August 30; Vernon, Sept. 8 and 9; Revelstoke, Sept. 10 and 11; Nelson, Sept. 13; Cranbrook, Sept. 14 and 15; Fernie, Sept. 16; Grand Forks, Sept. 18.

According to the reports of lumbermen in the Kootenay, the demand for lumber in the Prairie Provinces is stronger than at any time during the past two years. Nearly every mill is in operation, and despite the large output, stocks, which last January amounted to about 200,000,000 feet, have decreased to about 100,000,000 feet. With a good crop an improvement in the lumber conditions this fall will be a certainty.

Last year the lumbermen at Edmonton lost two million feet of logs by the spring rush of water in the Saskatchewan river. They applied to the Government at Ottawa for assistance, but none was given, consequently, last winter they reduced their cut, in view of possible loss. They were wise, for the same conditions prevailed this year with another large loss. Water's mill, the Edmonton Lumber Company and the Fraser Lumber Company were the losers.

A large party of Minnesotan lumbermen was in Vancouver recently. It was comprised of Thomas H. Shelvin and H. C. Clark, of Shelvin-Carpenter Lumber Company, of Minneapolis, which controls timber areas in British Columbia; B. F. Nelson, of the Nelson Lumber Company, Minneapolis, who is looking over the pulp manufacturing possibilities on the coast; D. F. Brooks and M. F. Scanlon, of the Brooks-Scanlon Lumber Company, St. Paul; E. D. Keys, J. A. Nichol and J. R. Randall, of Minneapolis.

Among lumber and sawmill companies recently incorporated under British Columbia laws are the following: Otter Shingle Company, Limited, capital \$50,000; International Lumber Company, Limited, capital \$150,000, to purchase the mills of T. E. and W. O'Neil and W. H. Tackett in Cowichan district; Northland Timber Company, capital \$100,000; Westminster Mill Company, Limited, capital \$30,000; Brooks Timber Company (Minnesota, Minn.), capital \$250,000; agent, H. D. Blackford, Vancouver.

Complaint has frequently been made by lumbermen in the interior of British Columbia that forest fires were caused by sparks from locomotives, and many of the mills and timber owners had patrols of their own during the dry weather. One of the mills kept tab on the fires, forwarding the finding to Ottawa, with the result that the Railway Commission has notified the Forestry Department of the Dominion that it will send an inspector to British Columbia to see why railway companies are not using screened smokestacks according to the law.

Mr. F. L. Peck, of Scranton, Pa., president of the Mississippi Central Railway and president of the United States Lumber Company, has purchased 38 timber sections in the Renfrew district, on the west coast of Vancouver Island, from W. E. Simpson, of Iowa Falls, Ia. The consideration was \$200,000. Mr. Peck has not yet formulated his plans, but may erect a sawmill next year. He is likely to invest additional capital in British Columbia timber lands. The area just sold is mostly cedar, but also includes some pine. Its favorable location will greatly facilitate logging and milling operations. The standing timber is estimated to total seven hundred million feet. Mr. Peck's lumber company owns over 300,000 acres of pine woods in the Southern States, and its three sawmills have a cutting capacity of seven hundred thousand feet daily. One of the mills recently completed is a steel and concrete fireproof affair.

Lower the Cost Increase the Output

Hawthorn Induction Motors

will surely do that in your lumber-mill—or any other—Because

Hawthorn Induction Motors naturally must decrease the operating cost of any saw, any planer, any machine whatever, inasmuch as they not only increase the speed of the machine, but keep that speed the same whatever the load, and make that machine easier to operate because they give positive and instant control of stopping and starting. Incidentally there is no waste of power when the machine stands idle during working time.

Hawthorn Induction Motors also must surely lessen your outlay for power, materially—Because

the direct drive of a Hawthorn Motor, applied exactly when and where it is needed, utilizes all that horse-power otherwise lost by belt-drives and shafting. Often that lost power amounts to fifty per cent. Pay you to save that much, wouldn't it?

Built in such a practical way, and so shielded, that shavings, dust, chips, cannot possibly work into the mechanism. Nothing to bother over about a Hawthorn Induction Motor.

Take time NOW to send for Bulletin 507. It will perhaps give you new light on the lumberman's power-problem. Glad to mail it to you when you write to our nearest branch, as below:

They Stand the Test

The thousands of Shimer Cutter Heads sold on their merits proves that they will stand any fair test given them to determine their strength, cutting ability and general labor-saving features.

The duplicate orders from these trial patrons for Heads and Cutters to do other varieties of work, and to be used interchangeably with those first purchased, is also a convincing argument in favor of using the Shimer Cutter Heads to manufacture any special articles you may wish to get out in quantity.

For all-round service, at reasonable cost, our "Best of All," which are illustrated herewith, are the favorites. They are turned out of solid steel forgings and contain all the latest improvements in bit seats to give freedom in the cut and to make the overcut on bead, cove or bevel siding, etc. They also contain the Shimer Expansion feature to enable the operator to quickly and easily make any desired change in the thickness of tongue or groove. They are tools well worth investigating and cost only \$31.50 per set, complete.

We have the same tools without Expansion feature for \$4.00 less the set, besides many other varieties both cheaper and dearer, but for general all-around satisfactory service, you will make no mistake in selecting the "Best of All," as thousands of users can testify. Address

You are Losing Money if you Operate with Horses!

Patented in Canada and U.S.A.

Dunbar Logging Engine.

The Dunbar Logging Engine

with patented improvements solves the problem of increased cost in logging operations

We would call the attention of Lumber Operators to the following advantages and improvements of the Dunbar Logging Engines over all other makes. Our engines have been made heavier in every part and have larger Boilers with deep fire boxes for wood firing, and besides the usual equipment of injectors, etc. are fitted with Feed Water Heaters and direct connected pump, thus making a very large saving in fuel. Our patent attachment for adjusting the Boiler to suit the different grades of road eliminates all danger from rush of water to either end of Boiler, thereby doing away with burnt Crown Sheets and Tube ends.

Everything which experience has shown to be necessary, has been done to make as complete an engine as possible for the purpose, viz., hauling logs on ice and snow roads.

These Engines will haul upwards of 150,000 ft. of lumber, depending on the condition of the road which only requires to be made as for horses' operations except that they should be nine feet wide.

In every case there is a large saving over the use of horses. The results to be obtained are not based on theory but have been actually obtained and in some cases the saving has been 75%.

Our descriptive circulars and photos will be gladly sent upon request. They will certainly interest every lumberman who recognizes the importance of economical log hauling.

We also manufacture Shingle Machines, Rotarys, Stock Gangs, Planers and all Saw Mill Machinery.

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies are guaranteed never to fail when used as directed. You get your money back if they ever do.

They are

Johnson's Horse Liniment No. 1.
A penetrating Alcoholic Liniment. Put up in one gallon jugs, with full directions, per imperial gal. \$4.50

Johnson's Horse Liniment No. 2.
A combination of the best oils used as liniments, imp. gallon . \$3.00

Johnson's Horse Colic Remedy.
A sure and speedy cure for colic. Imperial gallon \$5.00

Johnson's Veterinary Healing Ointment.

Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada. Put up in 2 lb tins, each . . . \$2.25
or in 1/4 lb tins, per dozen . . \$3.50

Johnson's Condition Powders. (Concentrated).

Put up in bulk, per lb 30c.
These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to \$100.

Send postal for printed matter.

Mowry's Jumbo Edger and Gang

Separate or Combined

THIS IS ONE OF THE BEST MACHINES manufactured in Canada. We have sold quite a number of these machines and have some splendid recommends for them. Mandrel is $4\frac{1}{2}$ in. diameter by 10 ft. 6 in. long. Drive pulley is 20 in. x 20 in. The machine is five feet seven inches inside of frame. It has two water boxes. Two stationary and two movable saws (or more if desired). It has eight stationary saws for the gang side (or more if desired). It will rip up cants to eight inches thick. Take a slab off two sides of your small logs and run the log through the "Jumbo" and it will come out in boards. It is impossible for the cant to fly back. It has reverse gear so that if a cant binds the operator can touch a lever and run the log back. 24 in. or 26 in. saws are used. Prices quoted on application, with or without saws.

We Make All Kinds of Machinery and Tools for the Care of Saws

The sectional view of our swage shows our new spring bracket which permits the swage to tip forward during the operation of swaging. In this bracket we have preserved our compact construction features. It is practically as strong as a solid bracket, is impossible to get out of order, and is easily adjusted to give any amount of spring desired, or to be rigid and allow no spring.

This new feature of Hanchett Swages still further increases the efficiency of a swage which without this improvement has for a number of years been quite generally conceded to have the lead over any other swage manufactured. The spring bracket, in conjunction with the action of Hanchett dies, proves unusually effective in bending the tooth forward so that it may be faced perfectly with little grinding.

Sectional View of Hanchett Band Saw Swage.
(Patented January 5, 1909.)

With this spring bracket with its perfect adjustments, added to the unusually wide range of adjustment of Hanchett swages, the filer can swage his saws to a nicety, and adjust his swage to place the points just where he wants them, and get any amount of hook wanted.

These brackets will fit all the old Hanchett Swages, so that our old customers can avail themselves of this improvement by purchasing from us the new spring bracket.

We absolutely guarantee our swages and all swage parts, and any part furnished by us which fails to be perfect in every respect, both in workmanship and material, will be promptly replaced by us without charge.

Let us send you our New 1909 Catalog No. 18. It is the most comprehensive and up-to-date Filing Room Catalog in existence. It will interest you. : : : : :

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

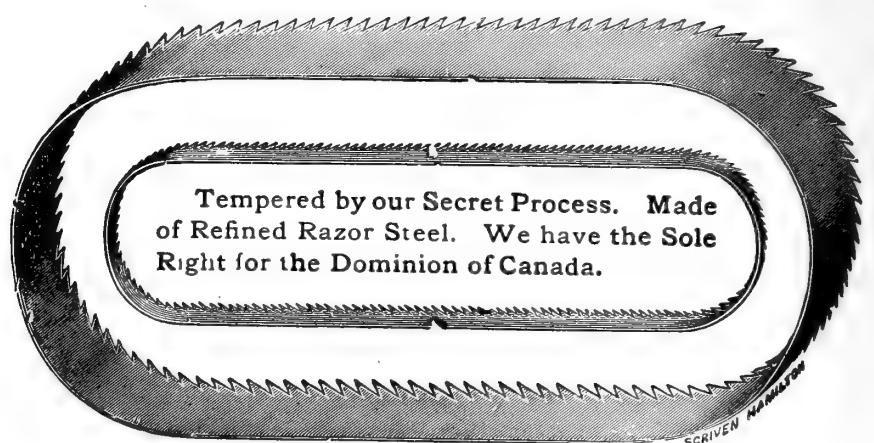

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

PETERBORO SAW MILLS

How the Steam Tension Band Mill increases your daily cut and saws uniform lumber

Think how much more sensitive a steam controlled device is than any system operated by weights and levers.

On our band mill we control the tension on the saw by steam, which is the only way we know of to keep the right strain **always** on the saw.

Thus your saw is always in shape to turn out perfect lumber, and you get a uniformly sawn product.

As the top wheel is moved up and down by steam, when you change your saws you save **all** the time (except ten seconds) formerly taken to lower and raise that wheel and get the proper tension on the saw. That is because no system of screws and gears can act as quickly as steam.

The top guide is also operated by steam so that the sawyer can raise or lower it instantly.

You see therefore that this is quicker and easier to handle than any weight tension mill.

That means more lumber every day.

A number of Canadian mills are cutting with it this season. Would you like to know who they are so that you can see it working before the mills shut down?

RED and WHITE PINE

Saw Mill at Cache Bay, Ont.

The Way to Get Good Lumber

as every manufacturer will tell you, starts with the selection of the timber. It is because we are particularly fortunate in having the finest pine timber in Northern Ontario, and are painstaking in our manufacturing, that our products to-day are so far ahead of the average.

We know we can satisfactorily fill your requirements when you are in the market for

**Rough or Dressed Norway and White Pine Lumber
Railroad and Structural Timbers**

Flooring, Ceiling, Moulding, Siding, Cross Arms, etc.

With a daily capacity of 190,000 feet of lumber, 65,000 pieces of lath, besides box boards, pickets, etc., we are in a position to fill orders of any size without delay.

Detroit Columns

are Standards of Excellence

In sales, in popularity and unequalled style and finish Detroit Columns are second to none. An examination at any stage of manufacturing will speedily convince you of the high grade material and excellent workmanship employed in their production. Our famous "Lock Joint" eliminates all possibility of shrinkage or warping, and presents that clean, even surface so much in demand. We stock in Pine, Birch, Oak and Chestnut.

A combination of Real Quality and Style is a sure winner in any line. Detroit Columns offer the retail lumber dealer many opportunities of adding to his reputation and to his annual profit. Why not investigate?

Style "B" for Mill Furnace

The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one:—

Berridale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited, Orillia.

Dear Sirs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

New Model Diamond Shaking and Dumping Grate Bar

We handle Boiler Flues, both new and welded; at lowest prices.

A post card or personal enquiry will bring a prompt reply.

DIAMOND GRATE BAR COMPANY

Branch Office: 119 St. James Chambers, TORONTO.

Telephone Main 1342.

Head Office and Factory: BERLIN, ONT.

The demand for the Diamond Grate has increased by 50 per cent. during the last 2 months and is giving splendid satisfaction to all our customers. Burning all grades of fuel with the very best results. All live Mill Managers and Engineers would do well to consult us when requiring new Bars. **These Grate Bars are warranted not to be an infringement on any prior patents. We stand behind our customers and guarantee them in the unmolested use of our own invention.**

We make a specialty of Boiler Setting and repairs to Boilers, employing none but expert workmen.

Cheapen Your Logging

By Using the Lidgerwood Skidding Method

The machine shown in the cut above will pull itself on snow or bare ground wherever a pair of horses could take a drag sled, dray, jumper, skidding or single sled. From any location alongside such road it will reach to the stump a distance of one-quarter mile or less in every direction and will skid all trees in full length or in log lengths. It will place the logs on skids or sleds or in the stream or lake as desired. It will re-yard logs, either taking the logs direct from teams or from the skidway, or where left by itself at a previous setting. It operates throughout the year and is absolutely independent of ground conditions; that is, such as windfalls, underbrush, rocks, cliffs, ravines, or the steepest slopes, operating under such conditions almost as cheaply as over smooth ground.

All swamping, rolling, sliding and expensive cant dog or other hand work is eliminated. It does not fill the logs full of gravel and it does not break or otherwise damage them.

It requires a skidding crew of eight men, uses for fuel one and one-half cords of wood per day, and has a skidding capacity of from 15,000 to 45,000 feet per day, and a re-yarding capacity of from 35,000 to 50,000 feet per day, depending on the timber conditions and management. It will skid the largest tree or a cord of pulpwood, or several small logs at each trip. It will clear 40 to 60 acres at each setting, moves itself quickly from setting to setting, operates independent of weather conditions, does not "eat" when not working, does not have to be "sprung out" and has a working life of fifteen years.

There are several hundred of these machines now operating in the United States and Mexico. Three have just been installed in Canada.

We now have a representative in Canada, who will examine your conditions and tell you what can be done, free of charge of any nature.

SIMONDS

**Inserted
Point
Saws**

**Made
in
Montreal**

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take \$100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.

An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

INSURANCE**

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only "The Best Protection at the Minimum Cost" in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to Insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our "ADVICE SHEET" system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Yellow Pine Imports Increasing

The extensive imports of yellow pine into Canada of recent years have been the cause of some concern to Canadian manufacturers of lumber. There are, of course, two points of view to be considered in connection with the matter, and although the Canadian manufacturer feels that it is scarcely fair that yellow pine should be allowed to cut him out of so much business, the consumer probably thinks that yellow pine competition has something to be said in its favor. There would not be much reason for complaint if yellow pine, like Canadian lumber, were sold on a reasonable basis of profit, but financial difficulties have so strangled many of the manufacturers in the South that for some time they have been disposing of large quantities of lumber at prices which preclude a profit, the object being apparently to realize money and keep making payments to the banks which have financed the mills. The present improvement in business conditions leads to a hope that this state of affairs may be bettered in the near future. For all concerned, it is to be hoped that this may be the case. Yellow pine products, especially the long timbers, are sometimes preferred even in Canada, at prices similar to those of Canadian goods, and it is to be presumed that they always will be. If, however, they are sold here at a profitable figure, no one will be able to complain.

That the complaints which have been made upon this subject are not without good foundation is easily to be seen from a few statistics regarding the imports of recent years. Four of the principal ports of entry of Ontario, Bridgeburg, Prescott, Sarnia and Windsor, show that although in 1907, when business depression was general, the imports declined, they exceeded in 1908 those of the good business year of 1906. In 1906 the total for these ports was 651,944 feet, valued at \$19,283,

against 418,761 feet, valued at \$14,450, in 1907, and 844,262 feet, valued at \$25,657, in 1908.

The imports of yellow pine into the whole Dominion of Canada show an even greater and more regular increase. In 1906 they amounted only to 22,576,299 feet, valued at \$565,474. In 1907 the total almost doubled, amounting to \$40,191,595, valued at \$1,288,791. In 1908, the total was more than three times that of 1906, viz., 68,946,389 feet, valued at \$2,170,143. The figures strengthen the belief that the Canadian market for yellow pine has been built up on prices which are not profitable. In 1907, when the lumber trade was entering a period of stagnation, the increase on a percentage basis was nearly 50 per cent., and in 1908, when the depression was deepest, the increase over the increased business of 1907 was about 25 per cent. The figures for 1909 will be awaited with a great deal of interest and are expected to show another large increase. The price obtained for yellow pine in Canada seems to point to an effort on the part of manufacturers to sustain the price rather than to slaughter the goods, and is a hopeful sign that in connection with improved business conditions, the low prices of the last two years will disappear. In 1906, when business generally was at high level, the average price obtained for yellow pine in Ontario was \$29.60 per thousand feet. In 1907 it increased to \$34.50, assisted, no doubt, by the great prosperity in the early part of the year and not immediately checked by the depression which commenced in the fall. In 1908, when the depression was so great, the price declined only to \$30.39. For the imports into the whole of Canada the figures are somewhat similar, the prices being as follows: 1906, \$25; 1907, \$32; 1908, \$31.45. If figures prove anything the foregoing demonstrate clearly that yellow pine manufacturers have come into Canadian markets to stay; that they are keeping a keen eye for every business opportunity; that they are increasing their sales rapidly, and that they have been able to maintain prices fairly well throughout a period of extreme dulness in the lumber markets. Canadian lumber manufacturers have a strong rival to meet in yellow pine, and will be able to meet it successfully only by consistently practicing modern and progressive principles of manufacturing and salesmanship.

The Advantage of a Small Yard

Retail lumbermen who are doing a fairly good business with a small yard are sometimes too quick to adopt a policy of expansion. Country yard owners often look with unfounded envy upon their fellows who conduct large city yards or a series of yards throughout the country. Business extension is the legitimate goal of all successful men, but there are times when those who pursue this object find that they have been running after a phantom. A large business, conducted with large capital, does not necessarily involve the making of more money than a small business conducted on a small capital. Recently the owner of a large city yard who was worrying over the expense bills and the low prices which he was obtaining for his stock, looked back with longing upon the good old times when in his little yard, with a small amount of capital, he was making a good profit and was burdened with far less anxiety.

In a large city the competition of a great many yards makes it frequently necessary to figure upon bills at cost price in the hope of securing trade which will result in more profitable orders at a later time. The loss from such business and the direct loss from figuring upon bills which never result in orders comes much less frequently to the owner of a small country yard. The man already referred to was quite ready to sell out his large yard and go back to a small one if he could find somebody who wanted to run his city business. This is, of course, no argument against the natural ambition of the progressive business man to do as big a business as he can, providing it can be done with a reasonable profit. The matter of profit, however, is just the sticking point which has brought trouble to so many during the recent business depression. Both in the manufacturing and in the selling line similar troubles have occurred and firms which have been seeking to do business at a loss rather than no business at all, have discovered the mistake they were making. None of them are to-day in any more favorable position for securing the business which has now turned up, than are those who rested quietly, husbanding their resources and waiting for the turn of the tide, which was certain to come.

In the matter of conducting a large retail yard or a lot of yards

there are many difficulties which make the life of the dealer burdensome. The employment of yardmen in the first place presents perhaps the most serious difficulties. The small dealer has very little trouble of this sort. In large yards employing one or two score of men, it is not an infrequent thing to find, just when large orders have to be filled that several men have decided to lay off or to secure employment elsewhere. Then the proprietor has to roll up his sleeves and turn in with the remaining employees, and at the same time to neglect his office work. Bills which have to be figured must be postponed lest the order be not filled. Cars of lumber may arrive just when the yard is short-handed

and large demurrage charges may accumulate. Lumber yard employees seldom seem to have any desire to remain in a steady situation. They know that they can obtain work anywhere and they do not worry about the trouble in the yard when they happen to feel like making a change. Harvesting, mine working, berry picking, railroad construction and many other forms of employment draw them from one place to another. About the only solution is to employ regularly more men than are ordinarily needed, so as to be sure of sufficient help during a rush of business. Companies which have tried this plan look upon the extra expense as a form of insurance against being short-handed,

Criticism of B.C. Products Based on Talk of Information

Lumber manufacturers during the last few years have had a great many difficulties to contend with, which have been caused in more cases than one can number by the ignorance of people who are not connected with the lumber business. Newspapers have long been in the habit of crying against alleged lumber trusts. When put to the test, fortunately, they have been unable to produce the proof. Far from being united in a trust, lumbermen have during the last two years been suffering perhaps more than any other class of business men from lack of co-operation among one another. No sooner had the dull times commenced to make themselves felt than lumber manufacturers inaugurated a widespread campaign of price-cutting which worked incalculable harm to the trade. All this, however, is fortunately now a thing of the past.

Business conditions are improving both rapidly and surely, and some of the difficulties of good times, such as car shortages, are beginning to make themselves felt. It is a matter of regret, therefore, at such a time as this, that from the ranks of lumbermen themselves there should develop difficulties which, as in other cases, are the result of lack of information. A case in point is offered by statements which were recently made by Mr. H. S. Chaplin, of Manchester, Eng., who has recently appeared in print as an opponent of British Columbia pine. He claims to have had practical experience of prejudice against British Columbia pine and in some cases to have been convinced of its unsuitability for the market in the United Kingdom. By way of illustration he

refers to a shipment of British Columbia pine from Chemainus. This lumber, he states, arrived in the old country in practically an unsaleable condition as the result of rot having set in during transit in the damp hold of a sailing vessel. Again, he states that the open grain of the timber is additional objection, inasmuch as when it is planed down the softer portion shrinks extensively and the plank soon displays a corrugated appearance. Comparing British Columbia fir with the Baltic product he declares that the former has not so great a breaking strain as the latter, and that when broken it snaps off like a slate pencil, having no beard at the fracture. In conclusion, he states that buyers expect too much from British Columbia timber. It is good, clean stuff, he says, but is not suitable for every purpose; for railway work it would do excellently.

Mr. Chaplin must surely have been misinformed regarding this matter or else he is making use of incorrect terms. Practically, there is no British Columbia pine exported, and it is principally used locally for making door and window sashes. Even in British Columbia, as compared with fir, it is a little utilized product, either for shipments or for construction. It may be that Mr. Chaplin was referring to British Columbia fir, which is used in many parts of the world for all purposes. If this be the case, his complaints are surely unfounded, as never in the past has any complaint been received about the shipments of this wood. In fact, the same may be said of the very few pine shipments which have been made.

Will Odd Lengths of Lumber Soon Become Standardized?

The conference recently held at Seattle, Washington, upon the question of standardizing odd lengths of lumber was the result of a gradually growing conviction that the present day methods, which have been in vogue practically since the commencement of lumbering in North America, are wasteful and unreasonable. The day has come to look closely into any proposition tending to more economic use of our timber resources. Even a layman is frequently surprised into exclamation by the lumber waste which he notices in the construction of buildings. Much of this could be prevented if odd lengths of lumber were manufactured. The "American Lumberman" in a recent article dealt with the subject editorially in a moderate manner, but in such a way also as to confirm those who look for this change, in their belief that, the movement being now under way will be brought to a successful conclusion before long by the natural law of supply and demand, unless urged along more rapidly by the efforts of those who already are working to that end. The editorial referred to is as follows:

A portion of those identified with the lumber industry believe the manufacture of stock into multiples of two-foot lengths, at least, to be a time honored, if not a sacred custom. At one time nearly all frame buildings and many of those constructed of other kinds of material, were designed so as to use without loss multiples of two stock. This custom happily has been disregarded in large measure. Houses are now built without particular regard to whether or not a waste of a few inches be incurred in cutting the joists, siding, flooring, sheathing or other material used.

Nearly all retail lumbermen and some manufacturers and wholesalers oppose the standardization of odd lengths in part because of the newness of the idea and the assumption that it would be more expensive to handle a greater variety of lengths. Retail lumbermen have entered a vigorous protest against the shipment of odd length piece stuff, joist

boards, flooring and ceiling. With respect to flooring, however, their objections are not applicable to hardwood, merely to pine. Retail lumbermen are handling without protest odd lengths of mouldings, siding and casing and in many cases moulded interior trim.

Perhaps a comparison of the ideas manufacturers and dealers now hold with those extant twenty years ago would show the progress made in the odd length material. The rules for the inspection of hardwood adopted by the Lumbermen's Exchange of Chicago in 1885, and revised and reaffirmed in 1889, stated: "Standard lengths are always recognized as 12, 14, and 16 feet. Shorter than 12 and longer than 16 feet does not come within the range of standard." An exception was made in favor of black walnut and cherry, where 10-foot lengths were recognized as standard. The rules of the National Hardwood Lumber Association describe standard lengths as follows: "Standard lengths are 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, but not over 15 per cent. of odd length are admitted. In the grade of firsts and seconds the lengths are 8 to 16 feet; but there must not be over 20 per cent. under 12 feet and not to exceed 10 per cent. of 8 and 9-foot lengths." The Hardwood Manufacturers' Association of the United States defines standard length in this way: "Standard lengths are 4 to 20 feet, with 15 per cent. of odd lengths in feet in any grade admitted as standard length."

Considerable ill-feeling has developed in regard to the standardization of odd lengths of yard stock. In view of current market conditions it is doubtful if the manufacturers would be able to carry out their ideas along this line. Some wideawake retail lumberman some day, recognizing the advantage to be derived from having a greater assortment of lengths, will quietly put in a stock and in a few years thereafter the change will be as great as that shown by comparison of the ideas of the Lumbermen's Exchange of Chicago in 1889 with those of the hardwood manufacturers and dealers of the country in 1909.

The Western Crop—Its Import to the East

**Conservative Estimate of Total Grain Yield:—295,841,734 Bushels,
Valued at \$157,293,100—An Appreciation from the United States**

One hundred and fifty-seven millions of money! That is the very least that the 1909 crop will mean to the people of Western Canada. It is the conservative estimate of a conservative institution. In the light of past experience we would be inclined to add ten per cent. to this estimate, but taking this as a safe basis for calculation, it is easily found that this amount will provide the West with \$157 per capita, a distribution surely unique in the history of all agricultural countries.

The "Last Great West" is marketing one of the best crops on record. General market conditions are such as to insure exceptionally good prices. There is no doubt, nothing open to question about this crop. It is assured. The period of danger, the days of harvest, has passed, and that which earlier in the season optimists dreamed of, pessimists derided, shrewd men banked on and all longed for, is no longer a shadowy possibility born of a fertile imagination, but a great, big Reality.

This being so, it behooves us in our own interests to look into the situation a little more closely, and to ask ourselves what this grain yield means to each one of us. In the first place, it will enable the farmer to discharge his obligations to the storekeeper. Similarly, it will benefit the latter, who will settle up with the wholesaler. Then it will provide a surplus for the farmer, who will invest in new implements and machinery—keeping Eastern factories well supplied with orders—and for the storekeeper, who will either put another storey on his old place or pull down his old structure and erect a modern building. Better credit will be obtainable, and Eastern manufacturers who carry Western merchants will be enabled to extend their business.

An exceptionally good crop opens up a demand for increased transportation facilities — and the railways carry constructive materials of Eastern make as well as grain of Western growth. This demand in former years has resulted in railway development hitherto unparalleled in history. The railway companies are always among the first to grasp the situation and their opportunities. They have already entered upon an important schedule of extensions in anticipation of an exceptionally heavy Western movement. Another noteworthy feature will be a marked increase in import business, due to heavier buying by manufacturers in anticipation of a big demand after the harvest.

The high prices of all classes of grain are the forerunner of a very rapid marketing of Western products. A natural result of this movement will be that money will circulate far more quickly. This will be beneficial to all classes: to the farmer, to the storekeeper, to the wholesaler, to the manufacturer and to those interested in constructional enterprise. The consensus of opinion in banking circles is that the present season will be an exceptionally early one, establishing new levels in financial transactions.

It is an old prophecy that Canada is destined to become the granary of the world, and its fulfilment is being worked out to a splendid consummation. This is no optimistic effusion. The plain stubborn facts are here to prove it. A quarter of a century ago the Canadian West had only one million bushels of wheat for export. Last year it had one

hundred millions odd. In some quarters it is estimated that in ten years' time the figure will reach 500,000,000 bushels.

It is singular that the greatest conservatism is to be found in our own midst. Perhaps we are too conservative; anyway we are not sufficiently enthusiastic, and certainly there is not the amount of practical confidence that is warranted, especially in the East. It takes the people across the border line to enthuse over Canada, and they are not afraid of doing so to their own disadvantage. Here is an extract from the Wall Street Journal which provides a good illustration in point:

"Kansas grows but twelve bushels of wheat to the acre. Alberta had an average winter wheat production of thirty-three bushels to the acre last fall, and in the Canadian West there are 200,000,000 acres of virgin soil wheat lands. Alberta and British Columbia possess the

greatest quantity of coal in the world, outside, perhaps, of Pennsylvania, and its adjoining States. British Columbia possesses lumber resources greater than all the States of the Union east of the Rocky Mountains. British Columbia is, moreover, now recognized as the orchard of the Empire. The Canadian West is now drawing 100,000 of the best farm population of the United States away to the virgin lands to the north. That country is being developed, and be it remembered that the climate of Alberta and Saskatchewan is the climate of Germany, and that Edmonton and Berlin have the same climate and latitude. The Mackenzie valley will grow finer wheat and more of it than the Missouri valley or the Arkansas, just as the valley of the Neva will grow it, and for like causes. However unpleasant these facts may be to the people of the States, it is folly to blind one's self to the fact that the Canadian West is destined to supply beef and pork, and cheese and butter, and bread to the world. It has the soil, the climate, and the cheap transportation, and it will have the people."

These considerations should prove palatable food for reflection for all, but particularly for the East, for whom the lessons of the greatest significance are

to be found. We have now entered upon the second year of recovery from financial depression and there should be in appreciable evidence a practical show of augmented purchasing power. The great bounds of the West towards prosperity must result in the rapid extension of Eastern Canada. This is a matter of precedent. Be it remembered that financiers the world over are watching us, and we may rest assured that according as we play our part now in developing the resources of the country, so, in due course, we shall be rewarded in terms of capital and advancement.

Advices received from Vancouver and Winnipeg just as we go to press state that a number of mills are already unable to secure cars to fill orders received. Two telegrams to Winnipeg from coast concerns state that they are utterly unable to secure cars to ship. Winnipeg dealers state that thousands of cars have been left standing idle for over a month awaiting grain shipments, and claim that this reserve has been made too early

GRAIN YIELD OF THREE PROVINCES ESTIMATED WORTH \$157,293,099.88.

The head office of the Canadian Bank of Commerce has received an estimate of the crops of the three western provinces, based upon reports from 390 branches and correspondents. The report says:

Allowing reasonable percentages for further depreciation and damage to the crop from various causes, such as rain, heat, hail, etc., we estimate the total yield for the three western provinces in wheat, oats and barley, as follows:

Wheat	bush.	113,979,336
Oats	bush.	157,537,750
Barley	bush.	24,324,648

The above figures have been compiled after carefully considering special reports from 390 branches and correspondents.

Taking the prevailing prices as a basis, we estimate the value of the above produce to the farmer about as follows:

	Bushels.	At.	Total Amount.
Wheat ...	113,979,336	88c	\$100,301,815.68
Oats	157,537,750	30c	47,261,325.00
Barley ...	24,324,648	40c	9,729,859.20
			<hr/> \$157,292,999.88

Lumber and Its Appliances at C.N.E.

Gratifying Increase of Exhibits—B. C. Government and C. P. R. Advertise the Coast Products Extensively—Many Exhibits of Machinery

Lumbering interests were more extensively represented at the Canadian National Exhibition at Toronto this year than ever before. Machinery manufacturers were represented by several firms. Belting and babbit metals were exhibited to good advantage. The Government of British Columbia inaugurated a commendable policy of publicity by displaying an attractive assortment of finished lumber products. A small exhibit of Kootenay lumber products was also shown. This is all as it should be, but a beginning only, has been made. Lumbering is one of the greatest industries in Canada and has been surprisingly overlooked at the Exhibition. In future, possibly other provinces will emulate British Columbia's example, and will vie with one another in securing publicity for their lumber through the medium of the Canadian National Exhibition. Among the exhibits noted this year were the following:—

In the C.P.R. exhibit, in the Railway Building, one of the most interesting features of the whole exhibition was the moving picture entertainment, showing the industrial resources of British Columbia. Among the pictures there was a splendid series depicting some of the features of the lumbering industry. A train trip was first shown passing through and alongside some of the great forests of the province. Then came a series depicting the felling of one of the giants of the forest. Two men were shown sawing the tree, and standing on the sawing platform high above the ground. Their work was clearly shown and the ever-increasing cut of the saw was watched with interest. When the sawing work was finished one of the men moved away to a place of safety. The remaining man after two or three vigorous chops with an axe scampered down to the ground and hurried off likewise, out of harm's way. Then slowly the great tree commenced to topple. Presently it gained headway and came crashing to the ground amid such a shower of branches and broken limbs that one almost felt the crash and heard the crackling of breaking branches.

No sooner was the great trunk stretched upon the ground than a force of men and horses commenced hauling it away to the skidway, whence it was rolled into the river. The arrival of the logs at the lumber mill was also shown. A large number of people attended the exhibition of moving pictures each evening and appreciated them greatly.

The Provincial Government of British Columbia had an excellent exhibit of wood products. These included a number of panels of various mercantile woods, both finished and plain. The exhibit also included a cedar plank 30-inch by 30-inch, a spruce plank 3 feet 5½ inches square, a fir plank of the same dimensions, a cedar plank 10 feet long by 2 feet 6 inches wide, and a fir plank 10 feet long by 4 feet 5 inches wide. These were all from the British Columbia Mills Timber & Trading Company, of Vancouver. The adaptability of British Columbia lumber for interior purposes was well displayed by a handsome fir door planed on one side and left with the natural finish on the other. A cedar door similarly treated was particularly handsome and was remarked by many visitors for its beautiful grain. A number of panels were also shown, of cedar, English oak, hemlock, fir, cypress, spruce and bird's-eye maple. The exhibit was in charge of Mr. W. E. Scott, of the British Columbia Board of Horticulture, and Mr. W. J. Brandrith. The exhibit also included a section of a fir tree which measured 61 inches in diameter and 65 inches in diameter, not being exactly circular. This section was cut 25 feet from the butt. There was also a section of a spruce tree measuring 59 inches by 61 inches, cut 35 feet from the butt, and a section of a cedar tree 43 inches by 44 inches. In the Railway Building there were also some interesting samples of lumber from the Kootenay district of British Columbia treated in a similar manner to that of the Provincial Government's exhibit.

The Dominion Belting Company, Limited, Hamilton, Ont., displayed a wide range of their various classes of belting, including "Maple Leaf" stitched cotton and duck belting, of which they are the sole manufacturers and which they claim is the strongest, most durable and best driving power belt on the market. This belting is made from duck specially woven for the Dominion Belting Company according to their own formula, and they claim that it contains the least possible stretch with the greatest possible strength. It is machine folded and lock-stitched with a special strong cord, each row of stitching being entirely independent of the other rows. The belts are waterproofed by the company's own method, which they claim renders them impervious to water, steam, oil or gases, and makes them flexible under all conditions. This belt is uniform in width, strong in surface and can be made in any length desired without joints. The company also manufacture the "Maple Leaf" belt tracings for keeping belts soft and pliable and preventing slipping. They are agents for the Jackson wire belt lacing machines and have re-

cently taken over the business of the Canadian Buffing Wheel Company, which enables them to furnish buffs in canvas, bleached and unbleached cotton and muslins, etc. Their exhibit was of much interest to all lumber manufacturers and others in whose business power transmission is a factor.

D. K. McLaren, Limited, Toronto, St. John, Vancouver and Quebec, showed an extensive line of their genuine oak-tanned leather belting, Balata rubber, American duck, and Baltimore belting. This firm's products have become so well known to the trade that their exhibit is always sure of being visited by a large number of pleased customers. This was no less the case this year than in other years. The company are also headquarters for mill supplies of many kinds. Chief among these is the Philips' pressed steel pulley, manufactured by Philips' Pressed Steel Pulley Works, Philadelphia, Pa. The exhibit was in charge of Messrs. R. M. W. McLaren, Joseph Haines and R. S. Semple. Mr. E. J. Webb was present in the interests of the Philips' Pressed Steel Pulley Works.

The Canadian Steam Boiler & Equipment Company, Limited, 186 Queen street east, Toronto, exhibited the Cyclone shaking and dumping grate bar, of which they are the manufacturers and owners. The company claim that this grate bar has no equal to-day as a steam producer, fuel and labor saver. It is in use by a large number of factories, mills and public buildings and is giving good satisfaction in each case. In addition to this product, the company also manufactures a number of other steam specialties, including feed water heaters, boiler feed pumps, smoke consumers, automatic air vents, etc. Among this company's interesting products are the N. D. vacuum specialties, which enable them to give special inducements to anyone requiring vacuum heating. They had on exhibit a vacuum valve, which was examined with interest by many visitors. The exhibit was in charge of Mr. Hemple.

The Diamond Shaking & Dumping Grate Bar Company, Berlin, Ont., exhibited their new model Diamond shaking and dumping grate bar. The "Diamond," they claim, combines the very best features of all the old style bars with improvements which ensure greater economy of fuel and labor. The bars are built in the company's own foundry and all bars are thoroughly tested before being allowed to leave the factory. The company claim that these bars save from 10 to 25 per cent. in fuel, that they have more air space than any others, and that they give as good results from natural draft as from forced.

An exhibit which has come to be looked upon as a fixture at the Exhibition and one which attracts probably more interest and admiration than any other is that of Shurly & Dietrich, Galt, Ont., manufacturers of Maple Leaf saws and of mill supplies in general. Their saws and mill tools were arranged in an attractive symmetrical design in three panels of wall space in such a manner that the light played upon them and attracted attention from every quarter. This company has been exhibiting for a great many years. Their first exhibit was in the year when the Marquis of Lorne and Princess Louise visited the Exhibition. Shurly & Dietrich temper their saws by a secret chemical process which toughens and refines the steel and which is of especial value in the manufacture of large circular and band saws. They use extra refined razor steel imported from England, and claim that in this way they are able to produce saws which hold a keener cutting edge, wear longer and are less liable to get out of order than when made by any other process. The company have a great many customers in the United States and claim that they are the only manufacturers of saws in the world who are able to sell their goods in competition with American goods in the United States markets. Their exhibit was in charge of Mr. T. F. Shurly and Mr. O. H. Vogt.

Cowan & Company, of Galt, Ont., had several of their machines on exhibition. Chief among these was an interesting chain saw mortiser. This little machine is a wonderful time, labor and money saving device. It is easily operated, makes little noise, has no jar and involves no boring or core cleaning. The company claim to be the only manufacturers of chain saw mortisers in Canada. This machine has taken well in the Canadian market and the orders for it are rapidly increasing in number. The mortise is made by a chain, each link of which has a sharpened tooth so formed as to carry out its own chip. This chain travels approximately 1,500 feet per minute, during which period 40,000 teeth are presented to the work, and while one tooth removes but a small amount of material, the collective cut of all the teeth greatly exceeds anything possible by other mechanisms. Another machine shown by this company, of which they are the only Canadian manufacturers, was their box board matcher. They exhibited also a number of other machines,

among them being their 13-inch moulder with compensating gear, which was recently described in the "Canada Lumberman and Woodworker." Cowan & Company also showed a combination rip and cross-cut saw and a dado machine. Several of their machines were in operation, showing their good running and working qualities. The exhibit was in charge of Mr. W. Cowan, of Galt, and Mr. S. F. Barron, Toronto representative.

Batts, Limited, of West Toronto, had an attractive and comprehensive exhibit of staved columns, veneer doors, newel posts, cypress greenhouse material, pine doors and frames, sash, flooring, trim, turned newels and balusters. The exhibit was in charge of Mr. Richard Martin. The products of this company are widely known for their superior manufacture and reasonable prices. Mr. Martin reported that many enquiries were forthcoming at the Exhibition, giving promise of a good fall business. Batts, Limited, have recently doubled the size of their planing mills and are now equipped to turn out large quantities of the very best classes of product.

The G. Walter Green Company, Limited, Peterborough, Ont., had an excellent display of their machinery for portable sawmills, shingle mills, etc. Some of their machinery was shown in operation and gave a good illustration of the splendid running qualities for which their products are noted. Among the machines which this company manufactures are shingle packers, saw jointers, saw gummers, double edgers, wood sawing machines and a general line of mill machinery. Their No. 0 portable sawmill is adapted for any power from 10 to 25 h.p., and will cut from 4,000 to 12,000 feet per day. Their new No. 1 saw carriage is an especially attractive machine. It can be run with from 15 to 40 h.p. and will cut from 4,000 to 20,000 feet per day. The exhibit was in charge of Mr. Wm. Silk and Mr. John Condon, both of whom reported that they were receiving a great deal of attention from visitors to the Exhibition and that their business had been increasing of late at a most encouraging rate.

The Dodge Manufacturing Company, of Toronto, Limited, displayed a full line of power transmission machinery, including rope drive, wood and iron pulleys, wood rim pulleys, shafting, couplings, hangers, pulley blocks, take-ups, post hangers, wall hangers, wall brackets, etc. An interesting part of their exhibit was the display of Dodge split and solid clutches which enable one to cut off or attach individual pulleys run from the main shafting. The easy running qualities of Dodge pulleys was illustrated by a pulley which was run on a counter-shaft from a temporary line shafting. This was propelled by a very thin piece of string. The exhibit also included sprockets and sprocket chains with their attachments for all purposes. The exhibit was in charge of John F. Hass, outside traveller, and T. J. Gerry, city traveller.

The E. Long Manufacturing Company, Limited, Orillia, Ont., had a very extensive line of mill machinery on exhibit. This included lath mill machinery, sawmill carriages, saw frames, double edgers, etc. Chief among their exhibits were double acting circular set works, and edgers from 32-inch up to 42-inch. The company manufacture edgers up to 64-inch. One of their most successful specialties is an improved hot blast grate which they claim develops more heat from green, wet or frozen sawdust and mill refuse than an ordinary draft grate develops from dry wood and coal, and that it increases the steaming power of boilers 50 per cent. The exhibit was in charge of Messrs. Frank Smith and W. McBain.

The Northern Electric & Manufacturing Company, Limited, Montreal, Toronto, Winnipeg and Vancouver, had one of the most complete and instructive displays at the Exhibition. Lumber manufacturers, and in fact all factory owners and managers, are keenly interested in the application of electricity to their needs. It has come about to-day that motor driven machines are recognized under many circumstances as the most efficient, economical and convenient to be had. The generators, motors, and other appliances produced by the Northern Electric Company are justly celebrated for their splendid qualities. Mill owners will do well to get in touch with the company when considering the question of power.

The Tallman Brass & Metal Company, Hamilton, displayed a wide range of their products, including their well known "Arctic Metal." The company guarantees every pound of Arctic Metal and claims that nine-tenths of the manufacturers of woodworking machinery in Canada are satisfied customers of theirs.

The Canadian Hart Wheels, Limited, Hamilton, had one of the most interesting exhibits to be seen in the Machinery Hall. This company is now operating the plants of the Canadian Corundum Wheel Company, Limited, and the Hart Corundum Wheel Company at Hamilton. These two companies in the past have established a favorable reputation for the excellence of their goods. They now produce the bulk of the wheels and grinding machinery used in Canada. Among the specialties which they had on exhibition were cup wheels, dish wheels, buzzers, special wheels for knife and for drill grinding, also for roll and for tool grinding, as well as a large assortment of emery and oil stones, etc. One of their most interesting exhibits was the "Beaver" gauge oil stones for chisels, etc., made in special shapes to suit various kinds of tools. The exhibit was in charge of H. E. Sherk, President, and Wm. Kerr, traveling salesman.

Lumberman President of Maritime Board of Trade.

The election of Mr. W. B. Snowball to fill the office of president of the Maritime Board of Trade will be greeted by lumbermen as a matter for congratulation to themselves and to the president-elect. Mr. Snowball is a man of considerable prominence in his own town. He was born on January 12th, 1866, and was educated at Chatham, N.B., grammar school, from which he graduated. Afterwards he attended in the years 1880, 1881, 1882, Upper Canada College, Toronto. He went into the lumber business with his father, on leaving college, and has been in the business ever since. In 1899 the company was incorporated as a joint stock company, as J. B. Snowball Company, Limited, at which time he became the secretary-treasurer. On the death of his father in 1906, he became president of the company.

Mr. Snowball was an alderman for Chatham during the years 1898 and 1899, mayor for the two terms of 1901 and 1902, and again went back into the council as an alderman for the years 1903, 1904, 1905 and 1907, and did not after that offer for re-election. He has been president for three terms of the Chatham Board of Trade and a director of the Miramichi Steam Navigation Company, of the South West Boom Company, the North West Boom Company, and chairman of the School Board of Chatham. During the year 1908 he was president of the Canadian Forestry Association.

Commissioner's Report on Fort Frances Inquiry

According to the report of Mr. S. Price, the commissioner who investigated certain allegations of falsification of returns made against the Fort Francis Lumber Company, the Ontario Government has been defrauded out of \$1,586.07 in timber dues and \$1,068.75 in penalties for trespass, a total of \$2,654.82. This is the decision arrived at by Mr. Price in a careful report which he has forwarded to the Minister of Lands, Forests and Mines. At the same time Mr. Price exonerates W. A. Preston, M.L.A., and W. W. Cassidy, manager of the company, from all blame for the offence. "The evidence," says Mr. Price, "precludes any reasonable suspicion that W. A. Preston, president of the company, was a party to or cognizant of the fraud, and there is not sufficient evidence for believing that the manager, W. W. Cassidy, was implicated in it." Mr. Price declares that, owing to the clumsy way in which the scale sheets were falsified, a comparison of them at the local Crown Timber Agent's office at Fort Francis or at the department in Toronto, with the reports of sample measurements made by the wood rangers, would have revealed the fraud.

The recent advance of \$1 per thousand in the price of British Columbia timbers and lumber does not seem to have allayed the demand in the slightest. Reports are now at hand that a further advance of from 50 cents to \$1 may be expected in the near future. The demand for British Columbia lumber picked up wonderfully in August and the September business will be very large. All the mills on the coast are reported to have about all the business they can handle, in the face of the shortage of cars. This difficulty makes it necessary for the mills to get as high a price as they can for whatever shipments they are able to deliver. The car shortage has already reached a critical stage. During the first week in September only about 20 per cent. of the cars required could be obtained and the indications were that conditions would grow even worse before they improved.

R. Laidlaw Lumber Company Obtain Two More Yards.

An encouraging indication of better times in the lumber business in Toronto is the extension of the business of the R. Laidlaw Lumber Company. The company have added two yards to their Toronto business, making four in all. The new yards are located, one on the old belt line a little east of Yonge street, and the other on Spadina road near the C.P.R. The former is not all laid out yet, but the building operations are in progress. A small factory is being erected for planing, sawing and matching. The building is nearly completed. The Spadina road yard is the old Jesse Cook property. The company will carry a full line at the new yards, the same as in their other two.

The commission appointed by the New Zealand Government to inquire into the condition of the local timber trade and to make recommendations for its improvement, has completed its work and, according to cable statements, has reported recommending the Government to make the long lengths of Oregon imported free, but to increase the duty upon short lengths from 2s. to 3s. per 100. Even if such a change be made it will not materially effect the importation of Oregon for any length of time. Canadian exports will be much more affected by the steamers, which have hitherto run from Vancouver to New Zealand ports, being withdrawn from the trade.

Under average forest conditions it takes more than 190 years to grow a 30-foot cedar pole.

A Good Method of Piling Hardwood

Northern Manufacturer gives Results of his Experience for Benefit of Others—Three and Four-Sticker Piles—Prevention of Checking and Dote

In the piling of hardwood lumber there are so many methods employed throughout the country that the experience of a manufacturer who has been in the business for a long time must be of value to all who wish to adopt modern and effective methods of saving their stock from

saving in cost. We are now building concrete blocks 16 inches square on the bottom, 13 inches square on the top, and 6 inches thick, that cost us about eight cents each to produce. We find that five or six of these blocks under an ordinary 16-foot timber will produce enough founda-

the losses, so frequently occurring in the yards. With the object of obtaining the results of experience in this direction the "Hardwood Record" recently sought the views of a manufacturer in the northern hardwood country. Readers of the "Canada Lumberman" will find

tion on firm ground to sustain a pile of green lumber 12 to 18 feet high, and, of course, the higher the pile, the closer the blocks will need to be placed. I enclose you herewith a pencil sketch showing you what we consider the proper method of piling hardwood lumber. You will note

much of value in the suggestions given and they are therefore reproduced herewith.

"I have given the matter of concrete foundations quite a bit of investigation and study recently, and we find by experience that we can afford to utilize concrete foundations in place of wood, and at a

that I show a side elevation for a four-sticker bottom, as well as a three-sticker bottom. To producers of hardwood who have a fixed market for their lumber so that they know that the lumber will not be in a pile to exceed a year or a year and a half, I would recommend a four-sticker bottom, but if their market is not positive and their lumber is liable to

remain in piles longer than this period, I would recommend a three-sticker bottom, as we find by experience that if the lumber is too long in pile on the four-sticker bottom the rear sticker will draw too much moisture and dote the lumber on the ends. The object of having the rear sticker is to prevent the lumber from checking, but we find that hardwood that is on sticks two or two and a half years is damaged less from checking of the 16-foot lengths on a three-sticker bottom than it is by dote on the rear end of the lumber on the four-sticker bottom.

"In this sketch, the writer has used 16 feet as the prevailing length, as that is the length we aim to cut as many of our logs as possible, cutting twelve or fourteen-foot lengths to save timber, and as we trim all our lumber to specified lengths, it will readily be seen that the short lengths can be doubled on the stickers and held to place in good shape, and there will be enough sixteen-foot lengths to carry up the pile in good form.

"In hardwood lumber we find the best results are obtained by using

"Another important point is that the rear end of the lumber should not be nearer the ground than twelve inches, and the front end of the pile should be high enough to give a pitch of three-fourths of an inch to the foot. In blocking up under the piling bottom solid blocking should not be used, as lumber is better preserved when there is a good circulation of air under the piles."

The sketches accompanying this article are supplied by the author of the foregoing letter. Fig. 1 shows the ground plan of piling with four stickers; fig. 2 shows side elevation of four-sticker pile; fig. 3, rear elevation; fig. 4, ground plan of pile with three stickers, and fig. 5, side elevation of a three-sticker pile.

The suggestions covered in this article and the accompanying sketches are worthy the careful analysis of all northern operators.

It will be noted that the scale of these drawings is one-half inch to the foot; that the proposed concrete blocks are 16 inches square on the

Fig. 4.

Fig. 5.

six-inch stickers for the front and rear, and three or four-inch for the interior stickers. Our practice is to allow a pile to lean to the front about one inch to the foot; that is, a pile of lumber eighteen feet high would lean to the front eighteen inches.

"And then, another point that is quite important, the front sticker should extend out beyond the ends of the lumber about two inches, so that the sun will not check the ends of the lumber, and the same thing would apply in case a rear end sticker is used. The interior sticker should be so arranged that none of the boards will extend beyond the sticker less than eight inches. We find by experience that if a board is piled in this manner it will check from the end of the board up to the sticker, while if it extends a longer distance there is enough strength to the board to hold it together and not check.

"The matter of roofing the piles is also quite important, and the roof boards should extend enough to the rear so that the drippings will strike on the ground and not on the rear of the pile.

bottom 13 inches square at the top, and 6 inches in thickness. The dotted lines indicate stickers.

Mr. Hugh Alexander Rose, Toronto representative of the Fraser River Lumber Company, Limited, Fraser Mills, B.C., was married on September 15th to Miss Ada May Burr, of Guelph, Ontario, youngest daughter of Mr. and Mrs. Myron W. Burr. The wedding took place at Guelph, and Mr. and Mrs. Rose left for a two weeks' trip to Quebec. On their return they will reside in Toronto. The "Canada Lumberman" joins with Mr. Rose's many friends in wishing Mr. and Mrs. Rose every success and happiness.

The death occurred recently of Mr. J. Girvan Elderkin, junior member of the well known lumber firm of H. Elderkin & Company, Port Greville, N.S. Mr. Elderkin was widely known among lumbermen and his death will be greatly regretted.

THE WOODWORKER

Shearing Cuts with a Straight Cutter.

By N. J. MILLETTE.

The following is a practical method of performing a shearing cut with straight cutters on shaper. By the use of these cutters, hard or soft wood can be shaped with or across the grain on very small pieces without chipping the wood. The percentage of defective stock is reduced to a minimum, and we can attempt to do some classes of work that could not be done by the ordinary straight cutter. The danger for the operator is greatly reduced, as the action of cutting is always smooth and uniform.

The sketches herewith show the method by which we can design and grind to constant shape cutters for this purpose.

Fig. 1 shows a "top view" of the bottom collar as placed on the machine, with the two cutters placed on a slant, as desired to be operated. The dotted outside line shows the travel of the cutting edge and

Top view of collar showing position of cutters as operated, and method of designing.

the way the cutter has to be made to perform the straight cut.

Fig. 2 represents the cutter laid out with corresponding points, to the position at which it stands slanting as operated, designed in such a way as to produce a perpendicular cut.

Fig. 3 is a "cross section" of the shaft and collars to illustrate the

Cross section of elevation, showing position of cutters as operated and gauge for grinding.

position of the "cutters," and the special grooves made in the collars to secure them in operation.

Fig. 4 is a sketch of the "gauge" required to grind cutters to true shape, laid out in such a way as to test both right and left cutters, by placing same on opposite side of the gauge.

Fig. 5 shows a cutter in position for testing on gauges. This is done by sliding the cutter along side of the gauge until the cutting edge reaches the shaped part.

All collars, cutters, gauges and tools of every description should be well marked so that everybody can tell at once what the tool is intended

for. This simplifies the direction. The marking of tools appears to involve much work when making them, but is a very small job compared with the time lost in daily handling when they are not marked.

The Making of Wooden Columns.

The making of wooden porch columns formerly was, and is still, to quite an extent, a special planing mill job. However, recent changes in styles and a much greater enlargement in the number used, have led to the development of manufacturing institutions devoted exclusively to column-making. The most notable changes in the columns are from solid material to a built-up or stave column, and from the old small, square post, turned part of its length, to the larger, round, smooth or fluted column of something like classic proportions.

There are still solid columns made. We can find here and there among the factories piles of the old squares 4, 5 and 6 inches thick, with a part of the length in the middle turned, but these are mostly piled up as remnants, and there is very little call for them except in certain isolated places. Also, there is another form of solid column in which a section of a tree, large enough to make the column desired, is used, having a hole bored through the centre or heart from end to end, then turned to the size and shape desired.

The great majority of columns, however, made now are built up of staves—that is, are made of comparatively narrow strips of lumber of various thicknesses, slightly tapered, and jointed together so as to form a barrel-like column, which is turned off on the outside, fitted with a base or pedestal and a cap, the column face being either left plain or fluted, depending on the desire of the user. Naturally it takes thicker lumber to make the fluted columns than the plain, because the staves must be thick enough to permit of fluting as well as turning off, and still leave enough body to give strength and stability to the column.

There are a number of ways of making staves for columns, and several different kinds of lumber used. The most general materials are poplar, cypress and Oregon fir. The lumber is taken in the rough and in thicknesses varying from one inch to three inches, depending on the size and kind of column being made—that is, the general size and whether or not it is to be fluted. The general run of columns, 6-inch to 10-inch diameter, requires only plump 1-inch lumber, whereas some of the large ones, 18 to 24-inch diameter, may require lumber 2-inch or 4-inch thick.

The method of converting lumber into staves varies in different factories. Generally, everywhere, the first step in the process is to cross-cut it to the length desired, and the next is to rip it into widths for the staves. Sometimes this ripping is done so as to give a flat joint, and then the staves are doweled together without further treatment, some with special shapes of tongue and groove joints, some with what are termed the lock joint, some one way and some another, some of the jointing being done on stickers and some on special stave column jointing machines.

After the jointing, no matter just what the form of joint, the staves are built up into columns, and generally the joints are spread with glue, to hold them together. After being built up they are clamped tightly with chain clamps or something of the kind, a series of which is wrapped around the columns to squeeze them tightly together and hold them while setting. The column factory glue room, while it is generally off to itself like the glue room in other woodworking institutions, differs materially from others in the simplicity of its equipment. There is no array of presses, forms and cauls. There is a glue-heater, a lot of pots and stands, and brushes for spreading the glue by hand, some trestle benches on which the column staves are laid while being built up, with drip pans or something underneath to catch the waste glue. This, together with a pile of chain clamps for binding the column staves together, constitutes the equipment of such a glue room.

From the glue room the column goes to the lathe, where it is turned to the size and shape desired, usually the turning being done by hand, without special tool-holders other than those in ordinary hand lathe practice. It would seem that here they might use back knife or gauge lathes, or something of the kind, that would turn almost automatically to the size wanted, and probably some of the factories do, but in others the variety of work required seems to render this inadvisable; and, anyway, a column turner soon becomes expert enough that he can practically gauge his work with his eye and turn a column almost as quickly by hand as could be done with a latch lathe.

After turning, if the column is to be fluted, it goes to the fluting lathe. Here we find some difference from the ordinary planing mill practice, where fluting attachments are put on the turning lathe. One might argue that there is no need to make an extra handling and reset the column in another lathe, to flute it. It is found, however, that the

fluting takes up too much time from the turning lathe, consequently the fluting lathe is generally kept separate from the others, with a man in charge who does the fluting on such columns as are to be fluted, while the others that are turned smooth are finished and sent on, and the lathe continues uninterrupted.

The great majority of columns made vary in size from 6-inch to 12-inch diameter. That is, the largest number are within these sizes, but there are lots of larger ones made to special order, and some of the column factories are equipped to make them as large as 30-inch diameter and 24-foot long. The writer caught a picture of one of these especially large columns, one 28-inch diameter and about 20-foot long, while the flutes were being cleaned up by hand. These larger columns and those of special size and pattern, while they go through the same process as the standard stock in a general way, require some special treatment. That is, a little hand work now and then in the way of cleaning up flutes—and, of course, they require a very large lathe. The one referred to, capable of turning columns 30-inch diameter and 24-foot long, was found over to one side of the building by itself. It had been very carefully bedded in concrete, to reduce vibration. Formerly they had it setting on the floor along with other lathes, but found that in turning these large columns there was considerable vibration, so they took it off to one side and bedded it in concrete.

One of the important things about columns, no matter what material they are made of nor just how much they are jointed, is to have the stock thoroughly seasoned before working. Another is to paint them immediately after they are done, to prevent swelling, shrinking and checking and the opening of the joints. In some factories they are not only painted, but are wrapped with thick paper before they are packed away in the warehouse, to protect them not only from moisture, but from having the face damaged.

The plain turned caps and bases of the columns are made in the column factory on the same lathes, with the assistance of band saws, but the ornamental caps of classic design, with carving, are generally made of composition material. These are purchased by the column factories and kept in stock in various designs, ready to ship out with the columns, so that the column and its trimmings may all be purchased from the same place.—K. L. Thayer, in "The Woodworker."

Scrolling with a Band Saw.

There is really too much tendency to do scroll work with a band saw these days which by rights should be done on the scroll saw, writes J. Crow Taylor, in the "Woodworkers' Review." This subject has been mentioned in these columns before, but the general persistence in the practice suggests the necessity of not only making mention of it again, but of adding a word or two of advice, and that is, if you will substitute the band saw for the scroll saw try to make it do its work better than the average band saw usually does it. This is no reflection on the average saw, because they do the work as well as band saws, but to compare the average band saw work to scroll saw work is quite frequently like comparing rough-sawed lumber to stock that has been through a planer. Some well kept band saws in the hands of an expert do nicer work than some poorly kept scroll saws in the hands of an ignorant or slothful operator, but that doesn't alter the fact that with the same degree of skill and care in the operation of the machines the scroll saw will do much smoother work than the average band saw. Quite frequently this difference amounts to more in the cost of sanding and smoothing up by hand than the extra time to do the work on the scroll saw as compared to the band saw. Therefore, if you persist in using a band saw for scroll work, see to it that it is kept in the pink of condition, so as to reduce to the smallest possible minimum the hand sanding required to make a smooth job.

Do you know, I think the best thing that one can turn to, as an aid to keeping the band saw in the pink of condition, is an automatic filer or sharpener. I am not out to advocate the use of any special machine, that would not be fair. Besides, it has been a number of years since I have used one of these band saw filing machines, and many new and improved ones have come on the market since; but with one of the old reciprocating type used ten years ago, one of the kind which has been discarded frequently as being unsatisfactory, I got results that were so pleasing that I would not operate a band saw again without an automatic machine to do the filing. In the first place, it is too big and too tedious a job to be continuously filing by hand a fine tooth band saw, such as is necessary for smooth work. In the next place, the time required costs so much money that it is decidedly cheaper to buy an automatic machine. With these machines, as with everything else, a man has to study them to learn how to use them for the best results, otherwise they will not give the satisfaction they should. The main fault I have found in their use has been the tendency on the part of those using them to make the filing machine cut too fast. They want to get done too quickly, and make the machine sharpen a tooth to each stroke. The way to get excellent work out of such a machine and also out of the saw, because it means keen points, is to set this automatic filing machine so it cuts very lightly, and let it go round the saw two or three times, depending on the amount of work necessary to put keen points on the teeth. I would rather go around a dozen times with a machine than undertake to put it in good

shape with one trip around. After the machine is carefully adjusted it practically takes care of itself. Of course, you can not go off and leave it alone by the hour, but you can be doing other things, and keep your eye on the sharpening machine meantime, so there is very little additional cost in the extra time required to file a saw with a machine cutting lightly. The great thing with such a machine is that it encourages keeping the machine sharp and in good order, and if, in addition to using them one will give careful attention to the setting, the average band saw work can be decidedly improved in point of smoothness. And that's what we need when we do scroll work with a band saw, smooth cutting. The only way to get smooth cutting is to have a band saw in the pink of condition.

Short Drive Belts.

Of course, millwrights are well agreed on one point at least, and that is to hang shafting so the belted pulleys will not be very near together on centres, especially where a heavy load must be carried; 20 feet between centres gives a much more satisfactory belt, and one capable of doing much more work, than it is reasonable to expect where belted pulleys are not more than 8 feet or 10 feet between centres, or perhaps less.

When small pulleys are required, running at high rate of speed, they are very satisfactory on light machines; but if they must run at a low rate—say 500 r.p.m. or less—the mill man who expects that sort of a thing to do much work, especially heavy work, will—well, get left, that's all. But on heavy lines, with good-sized pulleys and correspondingly wide belts, I have had good success belting a countershaft, as I will explain, which I have found capable of doing a good lot of work ten or twenty-four hours each day, as circumstances required.

The sketch shows a rough plan of how I belted up a counter 60 feet long, with a varying load at the far end from the driver, requiring a 96-

h.p. transmission. Almost all sawmill machinists have had more or less experience with edging shippers, or "hogs," as they are commonly called, and know very well how varying the load is. The machines I had on this counter were in a pulp mill and were especially designed, but very similar to the "hog" in common use.

The main line was a 3 7-16-inch shaft, making 375 r.p.m., on which I put, close together, two pulleys 30 x 14-inch. The counter driven was 2 5-16-inch shaft, on which were two pulleys, close together, 24 x 14-inch. By referring to sketch the readers can see the space between the belts was wide enough to eliminate all danger of the edges of belts coming in contact with each other and becoming entangled, as they were only 12-inch belts on 14-inch face pulleys, although as a precaution I put a brace above and below the belt, B and A, and put a 1 1/4-inch pipe between the belts, which I have no doubt now was needless work.

As above mentioned, this was in a pulp mill that ran 24 hours per day, and after the first few days, to get the right tension to the belts, we had no trouble whatever, and it has now been running nearly a year. If the circumstances required, judging from the way those belts do the work, by putting in an extra bearing and more belts alongside, one could add to the power transmission and raise it to any desired efficiency.—L. R. B., in "The Woodworker."

The Russel Wheel & Foundry Company, Detroit, Mich., has just issued a well illustrated and tastefully arranged souvenir catalogue descriptive of the various makes of "Russel" cars. As the company points out, the demand for heavier car equipment has greatly developed with the growth of the lumber industry and the increase of distance from the mill to the timber. The Russel Company claims to be turning out a logging car which, in design and detail, compares favorably with the most modern standard railroad equipment.

The National Convention of Hoo-Hoo.

The national convention of Hoo-Hoo was held at Little Rock and Hot Springs, Ark., from Sept. 8th to 11th. The address of the Snark of the Universe was extremely interesting. Three important events, he said, had occurred during the year. One was the erection of the house of Hoo-Hoo at the Alaska-Yukon-Pacific Exposition. The house represented an investment of approximately \$25,000 and it had proved one of the most attractive features of the Exposition. Another work of much credit to Hoo-Hoo was the erection of the home for waifs and sick children, known as the Fairview Settlement. The structure when finished cost \$3,500. It contained sixteen rooms, splendidly arranged, to take care of the little patients. This work had been inaugurated and carried out successfully by a number of influential members at Indianapolis. Another event of much interest was the dedication of a memorial tablet to commemorate the birth of Hoo-Hoo. At the beginning of the last fiscal year there had been in the hands of the Scrivenoter \$4,589.17 to the credit of the distress fund. This fund had only been increased about \$100 during the year, and payments had been made from it amounting to \$1,035.15, leaving a balance on hand of \$3,652.11. It spoke highly of the character and financial standing of the members that so few calls for financial assistance had been made.

The Snark of the Universe also recommended that there should be selected some supreme representative who would be able to respond to the numerous invitations to attend concatenations and to devote his time to furthering the interests of Hoo-Hoo. He suggested also that a scrivener should be appointed who would give his complete time to the order.

The financial statement showed that it had cost approximately \$32,000 to carry on the affairs of Hoo-Hoo during the year. Of this sum about \$5,000 had been paid for buttons for new members and for expenses of concatenations. The publishing of the twelve issues of the bulletin in 1908 represented an expenditure of about \$7,000. He suggested that a change should be made in the date of the annual meeting, as it would be much easier to obtain a large attendance in July or August than in September.

The Scrivenoter's report for the year ending Sept. 9, 1909, showed receipts of \$40,954.75, and a balance on hand of \$10,758.06. Seventy-five concatenations had been held during the year, at which the initiations had included four life members, and 1,456 regular members.

Government Report on Forest Fires in Canada.

The report of the Dominion Government upon forest fires recently referred to in the "Canada Lumberman," contains much of interest to lumbermen. Referring to fires on the C.P.R. belt in British Columbia the bulletin says:

"The most serious fires on Dominion lands in 1908 were in the region of the dryest weather, the greatest railway danger and the most valuable timber of British Columbia. The fire season lasted here from early in May until October, and during that time a large force of rangers was constantly employed. In spite of their efforts upwards of 100 fires occurred, small and large, and there were injured over 10,270,000 feet of merchantable timber, 200,000 feet of which are a total loss, and the remainder of which can be saved only if logged immediately. In addition to this, forest fires over-ran large areas of cut-over and other lands, and killed outright the virogous young growth which had been established.

"The worst two fires of the railway belt occurred in the neighborhood of Shuswap lake on limits licensed to the Columbia River Lumber Company and the Arrow Lake Lumber Company.

"Both fires required the unremitting efforts of a large number of men for several days to subject them, and, before they were controlled, killed almost 10,000,000 feet of merchantable timber. A serious feature of these fires was that while the rangers and their assistants were putting forth every effort to overcome them, squatters and others interested in clearing the land were setting new fires in different places, as if with the intention of burning up the whole country.

"The Government, lumber and other business and industrial interests lose heavily by every fire which occurs in the railway belt. The large number of trains running over the main line of the Canadian Pacific Railway through the territory, the constant development of mining, lumbering and railroad construction work, and the increasing number of settlers in the timber on the valley land—all these render the danger of forest fire every year more acute. When forest fires start in the mountain country they sweep up the slopes with irresistible speed and force, and rapidly gather such strength and volume as to render their extinction an impossibility. They must be prevented rather than extinguished, and this requires that, if the immense resources of the railway belt are to be saved, the people must be educated to the damage resulting from forest fires, all possible causes of forest fires must be eliminated and there must be employed a large enough force of rangers to patrol efficiently the territory in danger.

"The Forestry Branch is yearly endeavoring to meet these obligations; and, as the timber has steadily risen in value and an increase of development in traffic and exploitation has increased the fire danger, there has been a proportionate growth in the protective system."

Referring to the public apathy in the matter of preventing the spread of forest fires, the bulletin says: "The Fernie fire is a good illustration of what is, throughout the newer districts of Canada, a common condition. The Fernie fire was, for a month before the town was consumed, burning in the logged-over lands and waste lands of the Elk River Valley surrounding the town. Because it was not destroying timber at that time merchantable no one made the slightest effort to control the fire. Though for over four weeks it spread through the timberland, destroying all small growth, it was allowed to continue unchecked, and the result was that it got into the slashing near the town, a wind sprang up, and, borne upon it, the fire consumed the town and almost everything within its limits, bringing to 22 persons a horrible death, and entailing on a large number the tremendous property loss of \$2,000,000."

The following table shows relatively the destruction due to forest fires in 1908:

Jurisdiction.	Number of Fires.	Area Burned Over.	Feet of Timber Damaged or Destroyed.	Value of Timber and Improvements Destroyed.	Men employed.	Private Expense.	Public Expense.
		acres.		\$ cts.		\$ cts.	\$ cts.
Dominion Government—

"Reports from all the provinces are unanimous in giving as the main causes of forest fires, sparks from railway locomotives, bush burning by settlers and carelessness by travellers and sportsmen. Fires from other causes are, to a great extent, preventable. The first necessity is the education of the people to the extent of the damage due to forest fires, the second a more thorough patrol of the country where fires are likely to occur, and the third a more stringent regulation on the railways."

Logging Machinery in Ontario.

The installation of a cableway skidder by the Eddy Bros. Company, Limited, of Blind River, Ont., is an event of much interest to Canadian lumber operators. The Lidgerwood Manufacturing Company, of New York, who manufactured and sold the machine, state that it is the first of its kind to be used anywhere in Ontario. As it is now working the engine is placed beside the sled road, and the further end of the main cable is one thousand feet away, on top of a very rough and broken mountain, and at an elevation of 240 feet above the engine. The machine takes the logs in bunches of from five to twenty, depending upon their size, conveys them through the air and drops them alongside the sled road, to be there piled for winter hauling. The machine is reported to have proved itself a great labor and money saver for such logging as abounds in Ontario, and to have rendered possible the securing of a great deal of stumpage that would otherwise have to be left in the woods. It is reported also that a number of neighboring operators propose to instal these machines.

The Lidgerwood Manufacturing Company have also installed a Lidgerwood system of logging for H. Cargill, of Cargill, Ont. The Cargill Company own a large hardwood swamp, approximating 10,000 acres. On account of the tangled undergrowth and an abundance of mud and water, the swamp is very difficult to log. When the logs, stove stock and cordwood are brought to the machine they are deposited on large, specially constructed draught waggons, and from there hauled to the mills by powerful traction engines. The fuel for both these machines will be wood, secured upon the ground at slight expense.

There has been a marked improvement in New Brunswick exports to the United States, according to United States Consul Botkin, who says that there was invoiced through the Campbellton consulate and Paspébiac agency, for the first six months of 1909, the dullest part of the year, goods to the value of \$303,504, against \$194,227 for the same period last year. The largest item was shingles, which amounted to \$127,539, the first half of this year, while spruce lumber totalled \$32,787, and laths \$25,114. The shipments to the United States for the year will probably go above the million-dollar mark. Exports of lumber, shingles, and laths to Great Britain, South America, Australia, South Africa and the West Indies, which in 1908 were about \$700,000, will be as large or larger during the present year. The district is busy and prospering.

YOUNG, Chairman, Publicity Department of Haileybury Board of Trade.

Limit For Sale

30,000,000 FEET SPRUCE AND JACK Pine, good quality, 130 miles west of Edmonton on Macleod River and G.T.P. Splendid proposition—move quick, snap—wire or write 359 Cumberland Ave., Winnipeg. 20

Timber, Lands and Saw Mills for Sale

The UNDERSIGNED Offers:—

Parcel 1. Ste Anne des Monts property situated on the South Shore of the St Lawrence River, Gaspé County, Quebec, about 1000 acres of Seignior or Fee Simple lands—at the mouth of the Ste Anne des Monts upon which is located a well equipped lumber and shingle Mill with ample steam power, electric lighting, with a capacity of 25,000 feet of Lumber and 125,000 to 150,000 pieces of Shingles each ten hours—also Dwellings for workmen, Stable, Store houses, Repair Shops and Mill Pond and storage facilities for logs.

About 300 square miles of licensed timber lands upon which disinterested Explorers make a minimum estimate of over 300 Million feet of saw logs, principally spruce, fir and cedar, and 595,000 cords of Spoolwood, and Pulpwood.

All on drivable streams an average of not over 30 miles to Mill Pond.

And all shanty plant tools and equipment on the property.

Parcel 2. What logs are now in the river estimated 3 Million feet board measure.

Parcel 3. Grande Vallée property situated about sixty miles east of Ste Anne des Monts on the South Shore of the St. Lawrence River in the County of Gaspé, Quebec.

About 54 square miles of Seignior or Fee Simple lands and 100 square miles of Licensed lands.

A new Mill consisting of a steam feed Circular saws—1 Mershon Horizontal resaw—with all subsidiary Machinery and ample steam power and electric lighting.

Capacity 50,000 to 75,000 feet of Lumber each ten hours—A practically new Mill for sawing shingles and railway ties.

With ample steam power and electric lighting to produce 125,000 to 150,000 shingles each ten hours.

All the shanty plants, tools and equipment on the property.

On the timber lands, disinterested Explorers minimum reports are 100 Million feet saw logs, principally spruce, fir and cedar and two hundred and forty five thousand cords Pulp and Spool Wood.

For further particulars, address,
G. A. MILLINER,
Deseronto,
Ont. 24

By Public Auction

Valuable Pine Timber Berth North Shore Lake Huron

Auction sale of the license to cut the timber on the south-east quarter of the

Township of Foster (9 square miles) more or less

on THURSDAY, OCTOBER 7th, 1909, at 3 o'clock p. m. at the QUEEN'S HOTEL, Toronto.

TERMS—One half cash; balance in nine months with interest at 6% per annum

For further particulars and Maps apply to MILLAR, FERGUSON & HUNTER, Barristers, Toronto.

This berth has only been operated one season and is well timbered with pine and other merchantable woods. It can be cheaply lumbered and the logs driven down the White Fish River. The timber is sound and subject to Crown Dues of one dollar per thousand B. M. for pine. The license has no time limit and includes the right to cut all timbers on the berth which can be easily reached from Nairn Centre station on the Soo Branch of the C. P. R. or from Little Current by boat. 19

Saw Mill, Timber Lands and Lumber for Sale

THE ESTATE OF J. D. McARTHUR, Esquire, offers the following Parcels, all situated in the vicinity of South Lancaster, Ontario.

PARCEL ONE: SAW-MILL consisting of tin roofed building with circular saw, trimmers, double edger, shingle machine and bolter, rip saw tables, planer for tonguing and grooving, lath mill, etc., lighted by electricity, light generated on the premises. Capacity 15,000 to 20,000 feet of lumber each ten hours with ample steam power. Good custom trade to the mill from surrounding district.

PARCEL TWO: About 1137 acres of freehold timber lands on which disinterested explorers make an estimate of over 36,000 saw-logs, principally Hardwood. The above limits are all on drivable streams and an average of not over 18 miles to the Mill pond.

PARCEL THREE: About two million feet of sawn lumber piled in the vicinity of the saw-mill consisting of maple, birch, ash, elm, pine, etc., etc. Also—2,000 cords of slab wood, and a large quantity of shingles.

Tenders for the above mentioned Parcels EN BLOC or separately will be received up till the FIFTEENTH DAY OF OCTOBER, 1909. For further particulars address Mrs. J. D. McArthur, c/o The Estate of J. D. McArthur, South Lancaster, Ontario.

The highest or any tender not necessarily accepted by the vendors.

Sale of Valuable Timber Limits

Andrew MacCormack Estate and Other Interests

THE UNDERSIGNED ARE INSTRUCTED to sell by Public Auction en bloc, at the Russell House, Ottawa, on September 30, 1909, at 2.30 p.m., the following Timber Limits situate in Block A, Upper Ottawa, Province of Quebec, viz:

Berth 676 Licence No. 580 of 1908-09, south half Lot 16, Range 4, Block A, 25 square miles; Berth 677, Licence No. 581 of 1908-09, south half Lot 14, Range 3, Block A, 21 1/4 square miles; Berth 611, Licence No. 582 of 1908-09, Grand Lac Victoria, River Ottawa, 19 square miles; Berth 678, Licence No. 583 of 1908-09, south half of north half Lot 16, Range 4, Block A, 9 1/2 square miles; Berth 679, Licence No. 584 of 1908-09, north half Lot 16, Range 3, Block A, 15 1/2 square miles; Berth 680, Licence No. 585 of 1908-09, north half Lot 15, Range 3, Block A, 18 square miles; Berth 681, Licence No. 586 of 1908-09, south half Lot 17, Range 5, Block A, 25 square miles; Berth 682, Licence No. 587 of 1908-09, north half Lot 16, Range 5, Block A, 25 square miles; Berth 696, Licence No. 588 of 1908-09, north half lot 17, Range 4, Block A, 25 square miles.

Total 183 1/4 square miles.

These limits are all surveyed and are easy of access by a good roadway from Ville Marie to their location. They comprise some of the best pine and pulp wood areas in the Province.

The Trustee reserves the right if the Reserve Bid is not reached, to offer the berths separately.

Terms—10 per cent. of the purchase money to be paid down at the time of sale, and the balance in equal instalments at one (1), three (3) and six (6) months thereafter with interest at the rate of 5 per cent. per annum.

For further particulars and conditions of sale apply to The Royal Trust Company (Ottawa Branch), and to Code & Burritt, Solicitors, Carleton Chambers, Ottawa.

Dated this 31st day of March, 1909.

THE ROYAL TRUST CO., Ottawa,
Trustees of Sale.

Hay for Sale

FOR HAY (TIMOTHY AND CLOVER mixed) apply to E. Simard & Co., 103 St. Francois Xavier street, Montreal.

Dated this 7th day of July, A.D. 1909.

THE ROYAL TRUST COMPANY,
Trustees for Sale.

Estimating Rules for Ties, Etc.

In the State of Pennsylvania the number of board feet of lumber contained in ties, poles, posts, etc., is estimated by means of the following table:

Railroad tie	44 board feet
Mine tie	25 board feet
Telegraph pole	150 board feet
Trolley pole	100 board feet
Fence post	10 board feet
Fence rail	8 board feet
Mine prop	18 board feet
Car of mine props	5,460 board feet
7,500 lath	1,000 board feet
3,500 shingles	1,000 board feet
Coard of wood	1,000 board feet

Passing of the Waste Heap.

The waste wood heap continues to diminish and pass away. A Massachusetts manufacturer of brushes recently made a discovery in Maine which supplied him with material exactly suited to his purpose. He went to the Pine Tree State to buy wood for the backs of hair brushes and the handles of shaving brushes, and chanced to visit the yards of a spool maker who was using white birch. The spool man took the white part of the wood only, and was throwing away the red hearts. Thousands of cords had been burned or dumped in the lake to be rid of it. The red hearts were exactly what the brush maker wanted, and at little more than the expense of freight he supplied his factory.

This is typical of the trend of manufacturing. Waste of wood is still great, but it is decreasing. What one factory cannot use, another turns to profit. Formerly mills threw away half the forest—tops left in the woods, sawdust dumped in streams to pollute them and destroy fish, slabs burned in

perpetual bonfires, and defective logs and low grade lumber abandoned as not worth moving.

This policy does not generally prevail now. Some mills have put in machinery to work up their own by-products, others sell their waste to manufacturers who can use it, as in the case cited in Maine. The properties and uses of woods are now subjects of careful investigation, and the problem of turning to account the odds and ends and the by-products is brought more to the front now than formerly.

Life of Burned Timber.

The question of how long timber will remain sound after being killed by forest fire is one of the many forestry problems which will be investigated by the Portland, Ore., office of the United States Forest Service during the present summer. There are thousands of acres of fire-killed timber in the States of Washington and Oregon, which are undoubtedly of great commercial value. These areas will be carefully investigated by members of the Forest Service for the purpose of determining the rate of deterioration and the usability of timber standing on them.

Timber which has been killed by forest fires is not necessarily of inferior quality until deteriorating agencies, such as decay and insects, attack it. The rate at which

deterioration advances, and the time elapsing between the fire and the beginning of the destruction, are very important questions which confront the Pacific coast logger. They will be studied under various climatic and forest conditions. A large number of typical burned areas will be visited and a variety of conditions investigated.

Fire-killed timber when sawed into lumber is often discriminated against by the consumer, particularly when it is to be used for structural purposes. In order to determine the merits of this material for the above uses the Forest Service will also investigate its strength properties at the timber testing laboratory of the service at Seattle, Wash.

The use of concrete for foundations, not only for mill and factory frames, but also for machines themselves, adds to the life of the machine and makes a much easier job of keeping them in good order and running smoothly. A solid concrete foundation keeps the posts carrying line shafting from settling and thus setting up strains in the machinery. And solid foundations under the machines themselves prevent vibration and keep the machines together in better shape. So when you have occasion to do repairing or remodelling of the foundations investigate the merits of this material.

Pine Lumber Co.

Telegraph Office: **Pine, Ont.** C. P. R. Station: **BAHNSEN**
WINDY LAKE

MANUFACTURERS OF
Red and White Pine
LUMBER and LATHS
Car Flooring, in Required Lengths

Our Red Pine, put up Box and Better, is nice stock. Take a Sample Car, and we are assured of further patronage.

The Mill Culls, though a little narrow, are otherwise "Choice," being culled for little red streak and little wane. They are splendid for Box Manufacture, and the Dead Culls too, with little waste, can be used for same purpose.

Try us, we will endeavor to satisfy you. We have our whole season's Cut to dispose of.

HUTHER BROS. PATENT GROOVER OR DADO HEAD

For cutting any width groove from one quarter inch to 2 inches or over

Can be used on any Circular Saw Material. Will cut a perfect groove with or across the grain. This is the only Dado Head on the market that gives entire satisfaction on all classes of work. No screw adjustment. For different width grooves, simply remove or add inside cutters. Sold by builders and dealers of wood working machinery in all parts of the United States. Will send on approval, in competition with any other make on the market; if not the best return at our expense. HUTHER BROS., SAW MFG. CO., Inc., 1170 University Ave., ROCHESTER, N.Y., manufacturers Circular Saws, Morgan Pattern Lock-Corner Box Cutters, Concave Saws, etc.

Review of Current Trade Conditions

Ontario.

A fairly firm tone prevails all through the market for lumber in Ontario. The export demand is a little better and prices are stronger for good qualities, though no marked advances have resulted. The strength in 1 x 12, 2 x 12 and 3 x 12 white pine which recently developed has become more marked and is believed to indicate a shortage of these sizes in all grades. The demand for 1 x 12 for export is extremely good, extensive orders coming in from South Africa and the Argentine.

British Columbia shingles and lath are suffering from an over supply in Ontario since the arrival of extensive shipments from the coast, as a result of manufacturers having anticipated the recent increase in the United States tariff. A traveller recently returned from a trip through western Ontario reports that most of the retail yards are now carrying stocks of shingles sufficient to carry them through to next spring. British Columbia lumber and dimension timbers in Ontario are in good demand. It is expected that a further advance of from 50 cents to \$1 a thousand will shortly be put into effect.

Ottawa reports state that the lumber trade is exceedingly brisk. Shipping cull sidings over one inch in thickness and seven inches in width are in especially good demand at \$27 to \$30 per thousand. One-inch stock is selling at \$24 per thousand, but the demand is dull. There is a good demand for good pine strips from Chicago and the Canadian West. Bix lumber is a trifle easier but prices are unchanged at \$17 to \$18 for large lots. Lath and shingles at Ottawa have been fluctuating. Lath, red pine and spruce are in good local demand at Ottawa. Mill run red pine is selling at \$15.50 to \$17 per thousand and the demand is good. Spruce and hemlock are also in good demand. Tamarack is also much sought after, especially for building stables and silos. Ties and telegraph poles are quiet. The best railway ties selling at from 42 to 50 cents.

The hardwood business is improving materially, the higher grades in particular selling at good prices. Some dealers are laying in fairly large stocks. Basswood at present is rather quiet but active movement is expected in a short time. The furniture factories are increasing their demands for several kinds of hardwoods, and with the Canadian National Exhibition over, it is expected that the fall trade will assume good proportions. Quarter-cut oak is very active, holding up at high prices, and is expected to remain so at least until next spring, when the stocks which are not being cut will have been seasoned sufficiently for placing upon the market. Possibly at that time a material decrease in prices will occur. Plain common oak is quite active, the furniture factories using a large amount of it. Elm has been moving quite freely, the two-inch variety especially being in good demand and scarce.

Eastern Canada.

Little of note has occurred during the past fortnight in connection with the lumber industry. It is thought that shingles will shortly be a little firmer but at present no changes have occurred. Manufacturers are making preparations for cutting about the same number of spruce logs on the St. John river during the coming winter as last year, and the contracts which have already been let are at about the same price as those of last year. The cedar cut will also be equal to the previous one. Spruce deals for export to Great Britain are unchanged. Local trade at St. John in spruce was much better during August of 1909 than August of 1908. It is expected that the rest of the season will witness a good and steady quantity of business. The price of English deals has remained unusually steady all summer, with a tendency toward

higher levels. The stocks of "English" are fairly heavy, amounting to between five and a half and six millions of superficial feet at St. John, which would sell at present at from \$14.25 to \$14.75 per thousand feet f.o.b. steamer St. John. Some dealers are expecting an increase in the price of cedar shingles. The August shipments of shingles were extremely heavy and St. John stocks were greatly reduced. They now amount to about two and a half millions of "extras" and one and a half millions of "clears," which are selling at about \$2.80. Good prices are being obtained at St. John for "2nd clear" cedar shingles, with the result that very few are being exported. They are selling now at about \$2.20 per thousand.

The Boston spruce market is fairly quiet with steady prices. Frames, 2-inch and under, are selling at about \$23.50, although some holders are asking \$24. Random has been quite quiet at \$23 for large sizes, but few offers at this figure are made. Spruce boards are in quiet demand. Shingles are somewhat stronger at Boston but the demand is rather dull. The best cedar "extras" are holding at \$3.80, though some sales are being made at \$3.60. Lath also are quiet, though some mills have been doing a fairly good business. The prices at present are \$3.60 to \$3.75 for 1½-inch, and \$4 to \$4.10 for 1¾-inch.

Great Britain

A slight improvement in the lumber business is at last reported on the London spot market. Stock deliveries and arrivals are both increasing. Prices are continuing very firm for deals, battens and floorings. At Churchill & Sim's recent auction sale common St. John sold at £5 15s. for 11-inch, and £5 7s. for 7-inch to 9-inch. At Liverpool there is as yet little in the condition of trade to warrant much improvement in prices. Some of the city sawmills are working three-quarter time and others at even less than this. There is a general feeling, however, that an improvement may be expected within the near future. The market for spruce deals remains steady, as usual. Arrivals at Mersey ports have been quite heavy. At Manchester it is reported that the timber trade is decidedly flat. Deliveries have been somewhat limited and imports are little different from what they were a year ago so far as the aggregate is concerned. It is also reported that there has been a heavy falling off in the import of spruce this year.

No important changes are reported in the lumber business at Glasgow. There is, however, a steadily increasing spot demand, which leads to a general conviction that improvement is about to occur. In fact, an all round healthier condition is manifest, and an active fall trade is looked for. The hand-to-mouth transactions which have been so general for a long time past are broadening out into regular trading. Buyers seem to have convinced themselves that the present time is opportune for acquiring stocks, and they are acting upon this belief. Spruce, teak, birch logs and hardwood lumber generally are moving, and in some instances quite freely.

United States.

The lumber industry is reflecting fairly well the general expansion in all lines of industry which has come about as a result of the return of confidence to business men. During August a first rate midsummer business was done, especially in the soft woods, and during the early part of September the position of all lines of lumber improved considerably. It is believed that the yellow pine situation is improving rapidly as a result largely of curtailment on the part of the southern mills, which are said to be cutting only about 60 per cent. of their capacity. Northern pine is in fair demand at Chicago for manufacturing purposes, though

Some of Our Specialties

We are manufacturers of White Pine Lumber in all the different grades and thicknesses. Any length furnished, from ten feet to sixty feet.

Always ready to quote on heavy construction timber, bridge timber, ship timber, ship decking, tank stock, silo material, etc.

Cutting special bills to order is a hobby with us.

Cleveland - Sarnia Saw Mills Co., Limited

SARNIA, ONTARIO

the volume of business is not extensive. Orders now being received are mostly for prompt delivery, showing that manufacturing concerns are in immediate need of lumber. No. 2 barn and better are in good demand at Buffalo but the low grades, as usual, are very dull. The hemlock situation is improved. At Chicago the prices of piece stuff and boards have advanced in sympathy with the advance in yellow pine. Even yet, however, they are too low to allow much profit. Country yards are sending in orders for immediate delivery and therefore are willing to pay a little higher price.

At Buffalo there is a good demand for hemlock. On account of the various sources from which it is drawn dealers are able to obtain supplies without paying the advances which have recently come into force in other places. Considerable fir is arriving at Chicago from the Pacific coast, but it is finding an active competitor in yellow pine, and even in hemlock. There is a good demand for car roofing, siding and flooring. Timbers are still quiet. At Buffalo there is still a decidedly good demand for Pacific coast fir and similar woods. It is expected that some of this class of wood will shortly be purchased in British Columbia, as a number of Buffalo lumbermen are taking an active interest in that field. The movement of shingles from the Pacific coast is very marked at Buffalo. There is a splendid demand for red cedar shingles in that part of the country. The depression in the cooperage industry at Chicago, and, in fact, throughout the country, continues with no sign of improvement.

A slight improvement has been noticed in the market for hardwoods at Chicago, and a large trade is looked for during the fall. Plain oak is the most important feature at present. The price of upper grades is quite firm. There is a better demand for birch firsts and seconds unselected. No. 1 common is fairly strong. Firsts and seconds in red birch are also in good demand at Chicago and so are the upper grades of ash, both white and brown. Basswood is firm and maple also is in good demand.

Market Correspondence

Ottawa Valley News—Brisk Trade at the Capital.

Ottawa, Sept. 12.—Many Ottawa Valley lumbermen report trade exceedingly brisk. Others assert that it is only moderate but that when the crop, which is late, gives unmistakable signs of its good quality, buying will be very heavy. At the same time a scarcity of cars is looked for and shipping may be hindered. There is an especial run just now on shipping cull sidings, thicker than an inch and over seven inches wide. Quotations run from \$27 to \$30 per thousand. One-inch stock is worth about \$24 per thousand, but the demand is weaker. A large quantity of the shipments is going to the Eastern market. The demand for good pine strips from Chicago and the Canadian West continues unabated and prices are very firm. There was a little decline in the prices for box lumber, sold in the last fortnight, but the situation has not materially changed. Buyers from the United States are willing to pay from \$17 to \$18 per thousand in very large lots. Lath and shingle have fluctuated a little. Inquiries for the better grade of shingles stimulated the figures for XXXX and the shipments across the border were large. This shingle being free from any flaw, is used widely for sheeting of summer houses and such like, while the cheaper grades are sold well on local markets on account of the building boom. The construction of new houses is represented by building permits for August, issued in Ottawa, amounting to \$317,000, compared with \$105,000 in the corresponding month a year ago. In July, 1908, the building permits were \$250,000, and this July \$1,300,000. Local consumption also creates a big demand for lath, red pine and spruce.

With red pine, mill run, selling at from \$15.50 to \$17 per thousand, buyers look eagerly for it. The price is now a couple of dollars below spruce mill run. But spruce and hemlock are also good sellers. Hemlock, which brings from \$12 to \$14 for one-inch stock, and a couple of dollars more for two-inch, 12 to 16 feet long, is scarcely fine enough to attract the outside market, but is used largely by local builders since pine prices became so stiff. Tamarac is selling at one dollar a thousand more than hemlock, and the heavy sales to farmers for stable and silo construction are leaving a big proportion of the pine cut for another market. The tariff changes have as yet made no appreciable changes in the sales.

The demand for ties and telegraph poles is quiet. The W. C. Edwards Company is producing a large quantity of seven-inch ties which will be used on the C.P.R., and other mills are turning out six-inch ties in considerable numbers. Except where the sales have been made in advance, the opportunities for selling are not bright. The price of the best quality of railway ties is from 42 to 50 cents.

Lumbermen in discussing the revival of trade comment on the gradual way that good times will return. Mr. C. Jackson Booth states: "The lumber trade has been exceedingly slack for the last two years and it has not yet begun to flourish. The lumber industry was the first to

feel the depression, but will be the last to recover from it. People must begin to build more and improve their property, and that is why the lumber industry must finally be revived. The Payne tariff cannot hit us hard because the Americans must have the lumber and they have to pay the duty. It is different with our paper, because the deliverer has to pay that duty."

Senator W. C. Edwards states that the depression which lasted two years is certainly vanishing, but that neither the boom of three years ago, nor any other boom, can be expected again.

Mr. Peter Whelen, president of the Ottawa Board of Trade and head of the Shepard & Morse Lumber Company, believes the lumber industry is bound to be brisk and that the tariff and crop situations are greatly in its favor. He is as optimistic as any of the Ottawa lumber kings.

Compared with a year ago, lumber prices are firm and much higher. Pine mill culls, spruce and hemlock are all from a dollar to two dollars better, and some of the upper classes of pine are three dollars dearer. The stocks are considerably lower, which is by far the healthiest sign for the continuance of the satisfactory quotations. The prices quoted a year ago in many cases do not differ from those of to-day, but fewer sales were made and purchasers rarely bought at the figures they are now offering.

The logs on the Ottawa river burst out of their booms on Labor Day and gave the Upper Ottawa Improvement company a big task in locating some of them. A north wind drove logs from the Quebec shore across the Ottawa river and endangered many of the pleasure craft along the Britannia beach. The steamer G. B. Greene was commissioned to help fight the storm, which lasted three hours, but still many of the logs got away.

From New Brunswick's Capital—Preparing for Winter Work.

St. John, N.B., Sept. 10.—The past fortnight has been productive of few changes of importance in lumber trade circles. There is some indication that the prices of cedar shingles will be firmer in the near future, but so far there have been no tangible developments in this respect.

The present month will be marked by the completing of arrangements, by the local lumber manufacturers, in connection with the getting of logs during the coming winter. The making of contracts has so far been marked by no conditions or figures in regard to quantity that could be called out of the ordinary. The indications are that the total volume of spruce logs cut on the St. John river and its tributaries during the winter of 1909-10 will be practically the same or perhaps slightly less than that of last season. Generally speaking, the prices named in contracts are fully equal to those of last year, and in some cases slightly in excess. The cut of cedar will be fully equal to that of last year.

The trade in spruce deals for export to Great Britain has been marked by little of a remarkable nature. The volume of trade in local circles during August has been considerably in excess of that of the same month in 1908, and all indications point to the conclusion that the balance of the year will be marked by a satisfactory and steady volume of business.

Prices of "English" deals have shown a remarkable uniformity all through the summer. While the tone is undoubtedly all in favor of a higher level in prices and while any change is sure to be—so it is thought by those most interested—in the direction of greater firmness, there has been no advance in price of real importance for a long time past. Local stocks of "English" are moderately heavy at present writing, the total quantity would range between five and one-half and six millions of superficial feet. The local value of "English" spruce deals may be estimated from the fact that a specification containing say 50 per cent. sevens and eights, 35 per cent. nines and 15 per cent. elevens may be purchased at from \$14.25 to \$14.75 per thousand feet, f.o.b. steamer, St. John.

The indications of an increase in the local price of cedar shingles have not yet taken tangible form, but such an increase would not be at all surprising, is, in fact, quite within the probabilities. It is stated that some advance over the prices of last week have been quoted, but there have as yet been no transactions at the advanced prices. Shipments of shingles were very heavy during August and local stocks have decreased materially, two and one-half millions of "Extras" and one and one-half millions of "Clears" would cover the available quantities at local plants and wharves. Two-thirds of these quantities are dutiable goods. An enquirer would be quoted on this line of goods, \$2.80. Many enquiries have been received in regard to "2nd clear" cedar shingles, but it is probable that only such shingles of this grade as are not needed for the local and provincial trade will be shipped, as local prices give much better results than may be obtained by shipping to the markets of the Eastern States. Local business has been good during the present year and has taken care of the much greater part of the 2nd Clears mentioned at local mills. The price obtained is \$2.20 per thousand.

Harry Simpson, of the Simpson Planing Mill Company, Toronto, Ont., has retired. The remaining parties will continue business under the old firm name.

A Popular Single Surface Planer.

The accompanying illustration represents the new 24-inch patent four-roll single surface planer manufactured by the Defiance Machine Works, Defiance, Ohio, U.S.A. This planer is designed for accurately planing hard or soft wood up to 24 inches wide and from 1-16 to 6½ inches thick. It is accurately constructed and meets the requirements of the most exacting wood worker. It is of especial value to furniture and piano manufacturers, pattern makers and others requiring smooth and true work. The frame is a single casting of sufficient strength to support the working parts and to overcome all tendency to spring or chatter.

The table, in one piece, is gibbed to the frame at the four corners and supported in the centre at either side upon two heavy steel screws, to overcome the liability of springing or sagging when the machine is doing its heaviest work, and it is raised and lowered to an indicator for determining the exact thickness of material to be planed, by a convenient hand wheel, which is out of the way. The cylinder, of forged steel, is accurately balanced, and great care is taken to have the journals ground perfectly true. These run in long genuine babbitt metal self-lubricating bearings. The cylinder is driven by a single 6-inch belt.

The feed is driven from the cutter head spindle. It can be arrested quickly while the machine is in motion by a convenient hand lever. Four large feed rolls are employed. Those in the table are mounted in milled seats with means for quick adjustment, while the upper rolls are controlled by compression springs with means for adjustment of tension. The gears and parts are heavy and well supported.

The company claim that this is in every detail the handiest and most complete small size planer manufactured, giving free access to the cylinder and cutters by simply raising the hood, and that the method of lubrication is most complete. The counter is furnished as follows: Shaft, 44 inches by 1 11-16 inches; one pair No. 2 ball and socket adjustable drop hangers, fitted with improved belt shipping apparatus; one driving

Defiance Single Surface Planer.

pulley, 24 inches by 6 inches; one pair tight and loose pulleys, 10 inches by 6 inches; speed, 800 rotations per minute. The loose pulley is fitted with bronze bearings and is self-lubricating. Five horse-power is used and the floor space occupied is 36 inches by 54 inches.

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

1127. Pine deals.—A Manchester firm asks for prices of pine deals from Canadian shippers.

1131. Oak planking.—A Manchester firm asks for prices of oak planking, all sizes, from Canadian exporters of same.

1141. Oak staves.—A Liverpool firm asks for prices of oak staves from Canadian manufacturers.

1151. Butter boxes.—A South African dairy company asks for quotations for butter boxes 12-inch cube inside and thickness of wood 5/8-inch. Quotations to be c.i.f. Durban.

1152. Railway sleepers.—A South African firm of general importers asks for quotations of railway sleepers. Quotations to be c.i.f. Durban and Delagoa Bay.

1153. Butter boxes.—A South African firm of general importers asks quotations for butter boxes in shooks. Quotations to be c.i.f. Durban and Delagoa Bay.

1154. Cheese boxes.—A South African firm of general importers asks quotations for octagonal cheese boxes, to hold 20, 30, 40 and 60 pounds cheese. These must also be packed in shooks and quotations to be c.i.f. Durban and Delagoa Bay.

1166. Maple wood.—A London firm makes inquiry for Canadian shippers of soft white maple wood, of which they wish to procure samples to judge of its suitability for their purpose.

1177. Wood pulp.—A north of England firm wishes to get into communication with Canadian exporters of wood pulp.

1183. Rock elm planks.—A London firm of timber merchants invites quotations from Canadian shippers of rock elm planks.

1232. Agency abroad.—A Japanese firm of importers is desirous of securing an agency for Japan, of a mill that manufactures all grades of British Columbia pine and fir.

1233. Hardwood lumber.—A firm in Japan having large hardwood interests would like to get into touch with a Canadian firm that could handle and import this product into Canada.

1244. White pine.—A Lancashire firm is anxious to get into touch with Canadian lumber firms open to supply "Uppers" quality white pine, in 3-inch, 4-inch and 6-inch thicknesses, in carload quantities.

1282. Cooperage, stock, box shooks, cedar posts, poles, railroad ties.—A prominent manufacturers' agent in South America covering the markets of Argentine Republic and Brazil, and Uruguay, who possesses first-class Canadian and United States references, is anxious to form connections with Canadian exporters of the above and similar goods.

Recent Patents Issued.

Below will be found a list of patents recently issued by the Canadian Patent Office, relating to inventions of interest to lumbermen, and furnished by Fetherstonhaugh & Company, Ottawa; Russel S. Smart, resident:

119,481. W. W. Grenville, Thorold, Ont.; process for forming pulp articles

119,674. A. N. Webb, Youngsville, Pa.; furniture joints for wooden structures

119,964. J. W. and G. B. Burns, New Westminster, B.C.; wood planer cutter heads; assigned to J. W. and G. B. Burns, E. H. Bucklin

119,972. J. Christie, E. Macdonald, St. John, N.B.; combined matching and splitting heads.

120,026. B. Friedlaender, Sebewaing, Mich.; wood facing compositions.

120,109. H. Stubb, Christiania, Norway; T. Quiller, Fredrocksstad, Norway; pulp strainers.

120,162. A. McNulty, Little Rock, Wash.; shoes or sockets for loggers' falling boards.

The Provincial Crown Lands Department of New Brunswick has made important new regulations for lumbermen on Crown Lands. It is provided that in future operations trees shall be sawn down at the swell of roots instead of being chopped down, and that a saw be used instead of an axe in cutting trees in lengths. The trees shall be lopped off as small as five inches in diameter and the lower limbs of every fallen tree shall be lopped off so that the tree will lie flat on the ground to rot. Scalers will be instructed to scale any and all tops left in the woods up to five inches in diameter. No spruce or pine trees shall be used for skidding or building roads, and if such are used they will become a charge against the license. No portable sawmill will be set up on Crown lands without first obtaining a license from the department. The Surveyor-General also orders that undersized spruce on Crown lands may be cut for clearance or thinning or owing to scrubby growth only on special permission, and in no case if it can be shown that in 75 years the spruce would attain 14 inches diameter breast high. Violation of this means double stumpage charge.

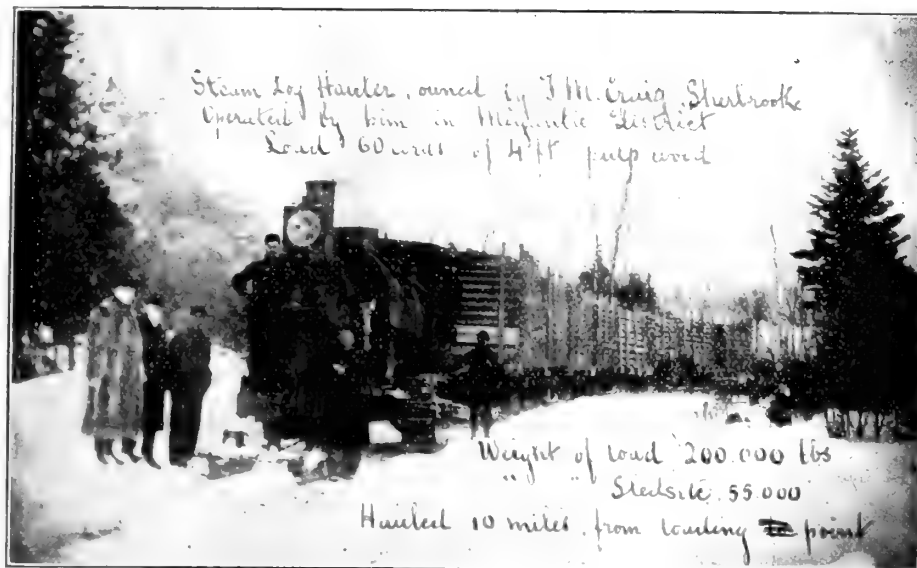

The improvement in the lumber business in Winnipeg during the last few months has been very marked. Mr. J. C. Graham, president of the J. C. Graham Lumber Company, Winnipeg, places it at 80 per cent. increase for the whole of the present year to date as compared with last year for the same period. "It is not so very long ago," Mr. Graham stated in an interview, "that we were doing business on long terms, but now that method is the exception, rather than the rule. Most of the business we do in Winnipeg to-day is on a strictly cash basis, and we have all of it we can comfortably handle at that. The demand is very good indeed. It is getting to be better known and appreciated every day, and as a consequence the market is constantly improving."

Mr. J. C. Graham, president of the J. C. Graham Lumber Company, Winnipeg, recently made a pleasure trip to Vancouver and other points on the Pacific coast. He spent a delightful fortnight in the mountains on a hunting and fishing trip.

The Government of Costa Rica has given a concession for cutting and exporting cedar and mahogany from a tract of 400 square miles near Guapiles. The concessionaire (whose name is obtainable from the Bureau of Manufactures) is to pay 70 cents for each tree cut and 50 cents for each log exported, which will make a tax of about \$2 for each tree. The consul adds that the concession is considered quite valuable.

The Lombard Steam Log Hauler

We have one of these haulers all made and in our Sherbrooke yards for Exhibition purposes, will be pleased to have you call and see it run for yourself.

They Stand the Test

The thousands of Shimer Cutter Heads sold on their merits proves that they will stand any fair test given them to determine their strength, cutting ability and general labor-saving features.

The duplicate orders from these trial patrons for Heads and Cutters to do other varieties of work, and to be used interchangeably with those first purchased, is also a convincing argument in favor of using the Shimer Cutter Heads to manufacture any special articles you may wish to get out in quantity.

For all-round service, at reasonable cost, our "Best of All," which are illustrated herewith, are the favorites. They are turned out of solid steel forgings and contain all the latest improvements in bit seats to give freedom in the cut and to make the overcut on bead, cove or bevel siding, etc. They also contain the Shimer Expansion feature to enable the operator to quickly and easily make any desired change in the thickness of tongue or groove. They are tools well worth investigating and cost only \$31.50 per set, complete.

We have the same tools without Expansion feature for \$4.00 less the set, besides many other varieties both cheaper and dearer, but for general all-around satisfactory service, you will make no mistake in selecting the "Best of All," as thousands of users can testify. Address

EDGINGS

Ontario.

The sawmill owned by the Hocken Lumber Company at Otter Lake, Ont., was recently destroyed by fire.

The pulp mills of the Ontario Power Company at Tamworth, Ont., were recently destroyed by fire. The loss is estimated at \$6,000.

T. A. Weldon, who for twenty years was manager of the Toronto branch of the E. B. Eddy Company, of Ottawa, recently resigned in order to accept the management of the Montrose Paper Mills Company, of St. Catharines, Ont., in which he has a large interest.

The Master in Chambers at Toronto has made an order on application of A. F. Aylesworth, for judgment in favor of the Charlton Sawmill, Limited, against the Simcoe Wood & Lumber Company. No cause was shown. The action was against notes to the value of \$1,105.79.

The logging season in the Georgian Bay district is likely to begin early, and an increased cut is expected. Some men have been engaged for work on the limits, wages at present ranging from \$24 to \$30 a month, the demand for harvesters in the West tending to keep up the rate.

Vere H. Smith and J. G. F. Lowson, representing English capital invested in the Gordon Pulp & Paper Company, which has a large mill at Dryden, Ont., recently arrived from England and have been engaged in making investigations to determine the extent of the company's operation.

J. R. Booth, of the Ottawa Valley, has invested heavily in cement stock, showing his confidence in the new building material. The next largest lumber manufacturer of the Ottawa Valley, Senator W. C. Edwards, has done similarly. They are directors of the \$30,000,000 merger, including a dozen of the leading cement plants in Canada.

The will of the late Mr. A. H. Campbell, of Queen's Park, Toronto, who was one of the foremost lumbermen of Canada, disposes of an estate of \$493,712, exclusive of life insurance in favor of his widow to the amount of \$34,191. The will divides the property equally among the children, subject to an annuity of \$7,500 for life to Mrs. Campbell, and the payment of a number of educational, religious and charitable bequests.

The new Lawrence mill in course of construction at Bruce Mines, Ont., is expected to be cutting logs this fall. Mr. Lawrence states that they are putting in one band and two gang saws, and will be able to run out 85,000 feet per day. In addition to the cutting of logs, a lath department and a box factory will be put in, making the mill one of the best on the shore. The other two mills at Bruce Mines are working double shifts.

The negotiations under way toward the amalgamation of the interests of the Perley Company and the Riordan Company, of Hawkesbury, Ont., are not complete, says Mr. Perley—only under consideration. The two companies have been carrying on an exchange of logs for some years advantageous to both. The small spruce from the Perley limits have gone to the Riordan mills to be ground into pulp and the large logs were given in return and converted into lumber.

Recent Dominion incorporations include: The Rhodes-Curry Company, Amherst, N.S., authorized capital, \$3,000,000; E. F. Surveyor, G. V. Cousens, F. C. Clark, S. B. Hammond and H. C. Boyle. The Bridgewater Lumber Company, Bridgewater N.S.; authorized capital, \$50,000. The Excelsior Lumber & Development Company, Ottawa, Ont.; capital, \$100,000; incorporators, J. S. Crawford, W. E. Brown, J. W. Gamble, J. J. Collins and C. W. Patton, all of Ottawa.

Mr. George E. Young, acting sanitary inspector of the Ontario Board of Health, has commenced a tour of the unorganized districts. He will visit lumber camps and such construction camps as are under provincial jurisdiction in order to see that physicians have been engaged to care for the men employed in them. He will also take cognizance of sanitary conditions generally in the districts. He will travel north over the Temiskaming & Northern Ontario Railway, and subsequently will proceed westward.

Mr. George H. Perley, M.P. for Argenteuil, in the Dominion House, proposes that the Government of Canada should introduce legislation affecting lumber or pulp in Canada at the coming session. The Conservative party, of which he is a member, has been advocating through private members for prohibition of the export of unmanufactured pine or spruce, but he does not feel disposed to take part in the campaign at the present juncture. It should be made a party question, he affirms, meaning that the party in power should announce a definite policy on the export of logs and give Conservatives a chance to approve or sanction the proposal.

Eastern Provinces.

The Mount Royal Box & Lumber Manufacturing Company, Montreal, Que., has gone into voluntary liquidation.

The Chaleur Bay Mills, at Mission Point, N.B., have been totally destroyed by fire. The mill was valued at \$138,000, on which there was an insurance of \$90,000.

Alex F. Crosman, architect, 84 St. Francois Xavier street, Montreal, is preparing plans for an addition to the Howard-Smith Paper Company, Limited, warehouse on Cote street, Montreal.

The work of rebuilding the Windsor mill of the Canada Paper Company, at Windsor Mills, Que., is progressing rapidly. In two months it is expected that the mill will be running. It will be fitted in the most up-to-date manner, and already about the mills a number of labor saving devices have been installed.

A sad accident recently occurred at River Philip Valley, N.S., which resulted in the death of Mr. Frank Schurman, a well known merchant and lumberman of that place. Death was due to taking a dose of carbolic acid by mistake. Mr. Schurman is survived by a widow and seven children, four sons and three daughters.

A Hull, Que., report states that operations as extensive as last year are assured. There will be 5,000 or 6,000 more men sent before the end of the season. Good choppers and teamsters are paid \$28 a month if they stay the whole winter. If not, the wage will be reduced by \$2. Road cutters and hands going to the woods for the first time are offered from \$20 to \$25, about \$2 more than

bermen.

ALL MY SOCKS BEAR THIS STAMP

My Socks are sold Direct only through Travellers of My Own

last season. Fifteen hundred shantymen have left the vicinity of Hull for the lumber camps.

Leading pulp and paper men of Montreal state that everything points to higher prices during the fall and winter. There is an increasingly steady demand for ground wood pulp from the United States, and very little is to be had. It is selling at \$20 a ton f.o.b. Canadian mills, but it is expected that it will be many dollars a ton higher during the fall and winter months.

An investigation is taking place at Quebec in connection with the recent administration of the Department of Crown Lands, especially in connection with the cutting of timber. Mr. A. Lajoie, Forestry Guardian, strongly disapproves of the system of granting lots to settlers, as in most cases they simply go in and strip the timber off in a wasteful way, and then leave for other parts, where they repeat the operation. He also made suggestions regarding the prevention of forest fires, regulations which would tend to eliminate waste in the cutting of timber.

Mr. Reuben Cooke, of Papineauville, Labelle county, Que., passed away recently at the advanced age of 88 years. Deceased was the father of Mr. J. R. Cooke, of Ottawa, and was well known throughout the Ottawa valley, having been for many years connected with the lumber business. About five years ago the late Mr. Cooke celebrated his golden wedding. He always took a great part in public life and was a municipal councillor for years, and a justice of the peace for over 30 years. He leaves a widow, three daughters, Mrs. P. Honer, Mrs. F. W. Simmons and Miss Georgia Cooke, all of New York City; two sons, Mr. J. R. Cooke, of Ottawa, Superintendent of the Children's Detention Home, and A. B. Cooke, of Papineauville.

The Laurentide Paper Company, Limited, has issued its annual report for the year ending June 30, 1909. The following are extracts from the report: The profits from the company's business for the year ended June 30, after providing for interest and contingent accounts, were \$283,892.64. The forestry system of the company has been most effective in preserving property. During the last season of disastrous forest fires throughout Canada and the northern United States, the company suffered no loss whatever. The profit and loss account shows a balance on July 1, 1908, of \$286,425.76. Added to this are the profits of the year, leaving a comfortable balance of \$570,318.39. The amount earned on the company's stock after allowing for the preferred dividends is equal to 12.49 per cent. of the 1,600,000 common outstanding.

An important delegation of the Province of Quebec pulp and paper makers waited recently on Sir Lomer Gouin, Premier of the province, and the Hon. C. Allard, Minister of Crown Lands, in regard to the new tax of 25 cents a cord. The object of the delegation was to ask the Government to suspend this tax on pulpwood exported from the province before being manufactured, in order to give time to the Canadian manufacturers to comply with the new American tariff, which imposed a heavier duty on paper and pulp. The delegation was composed of J. R. Booth and H. R. Erskine, of the Booth Pulp Company; W. H. Rowley and George Miller, of the Eddy & Sons Company; George Chahoon and J. C. Acer, of the Laurentide Paper Company; H. Biermens and A. C. Campion, of the Belgo-Canadian Pulp Company; Carl Riordan and W. K. Trower, of the Riordan Paper Company; O. Z. A. Parritt, of the Jonquieres Pulp Company; George MacDougall, of the Jacques Cartier Paper Company; F. G. Campbell, of the Canada Paper Company; R. N. Kennedy, of the James McLaren Company; J. B. Rolland, of the Rolland Paper and the Northern Paper Companies; Mr. Hyde, secretary of the Canadian Wood Pulp Association. The delegates represented to the Ministers that if the new duty of 25 cents a cord on the exportation of unmanufactured pulpwood cut in the Crown forests of the Province of Quebec was remitted it would enable them to meet their obligations on account of the new minimum tariff of the United States. As this 25-cent duty is the only one imposed by the Province of Quebec its withdrawal would put an end to all difficulties with the American Government. The Premier promised to submit the demand to the Ministers at the next meeting of the Cabinet.

Western Canada.

The mill of the Campbell Lumber Company, Weymouth, Sask., was recently damaged by fire.

The Hunting Lumber Company's mill on False Creek, B.C., was destroyed by fire recently, at a loss of \$200,000.

G. L. Lee, lumber dealer, Marshall, Sask., has been succeeded by the Calvin-Watson Lumber Company, Limited.

The Westminster Mill Company, New Westminster, B.C., will erect a large shingle mill on Lulu Island, within the city limits.

The Kinistino Milling & Elevator Company, Kinistino, Sask., have secured a mill site and will at once commence building operations.

The Yellow Head Pass Lumber Company, Limited, Kimberly, B.C., have assigned, and are being succeeded by the Taylor Lumber Company.

Messrs. Emerson & Loughheed have purchased Mr. J. S. Emerson's old saw-mill at Eburne, B.C., and several timber limits for a consideration, which, it is understood, was \$100,000. The Emerson mill has been idle for the last three months during construction of new buildings and the installation of new machinery and equipment.

S. T. Furushima and S. Murata have established a logging camp on Howe Sound, about twenty-four miles from Vancouver, on limits which were thrown up by the primary locators because the ground was too rough and inaccessible to permit of profitable development. The Japs, after an expenditure of \$16,000, have demonstrated that the project is feasible, and are taking out large quantities of bolts. The Chew Lumber & Shingle Company controls the limits, and it is estimated that this company will make \$150,000 in stumpage, while the Japs will make double that amount in the next fifteen years. The small timber will be taken out for the British Canadian Wood Pulp & Paper Company, which has a mill on Howe Sound, and which will start operation in about two months.

A deal has been completed whereby D. B. Stevens, of Rhineland, Wisconsin, has purchased the remaining timber limits on Lemon Creek, making his total holdings there 16 limits and two Crown grants of about 200,000,000 feet of lumber. The deal completed involved eight limits and two Crown grants. It is Mr. Stevens' intention to build a railroad from the head of the creek to the C.P.R. track from Nelson and take down the lumber by that means. He does not intend to trust to the vagaries of the Slokan river. He will build a large mill in that vicinity later. The building of this railway will be of the utmost importance to the Lemon Creek district, as there are many mining claims upon which good showings have been made and which have only awaited transportation in order to be developed into mines.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

A Word to the Wise

doesn't do any good if you're caught with the wrong goods. You can't talk your customer into buying goods when he can get better from your competitor. The burden of proof is on you. But when you buy and keep in stock the best goods you can get for the money, you needn't worry about your trade and competition. Good stock brings and keeps good trade. And just remember that

Fenderson's Lumber and Shingle products are the results of the best skill and supervision applied to as fine a run of Spruce and Cedar Timber as ever grew in the Eastern Provinces.

They are "Quality Lumber and Shingles" and there are none better because there are none better made.

DUNBAR Logging Engines

Patented in Canada and U.S.A.

Dunbar Logging Engine.

Strength, durability and simplicity are three factors that have made the DUNBAR the leading logging engine throughout Canada. Where long hauls are a necessity the most economical methods must be employed to successfully and profitably meet competition. DUNBAR LOGGING ENGINES will do the work of forty teams of horses over any road on which horses may be operated and do so at a big reduction in expenses.

Our patent attachment enabling the adjusting of the boiler to a proper level for climbing and descending grades, effectually prevents heated crown sheets or burned tubes.

We also manufacture Shingle Machines, Rotarys, Stock Gangs, Clapboard Planers and all Sawmill Machinery

All information and photos furnished on request

The Alex Dunbar & Sons Co.
Woodstock, N. B. Limited

Original Dunbar Improved Shingle Machine

Big results interest every manufacturer. The use of the Dunbar Improved Shingle Machine means increased trade capacity and a class of shingles that will meet all competition. It is practically automatic and machines a high-class shingle. Every line has a leader and for big results financial and otherwise the "DUNBAR" Improved leads the entire field. :: :: :: :: :: :: ::

With this machine delays and saw hampering are eliminated and repairs and labor expenses reduced to a minimum. It is a profit making machine and a good investment.

Shingle men using our machines are unanimous regarding the results. Geo. F. Parker, Buckingham, P. Q. :—"On a two million contract of bone dry cedar, the stock could NOT be manufactured at a profit without the DUNBAR MACHINE."

Metis Lumber Co., Price, Que. :—"Our experience has convinced us that the DUNBAR MACHINE is economical and does work at a minimum cost for repairs."

Machines equipped with 40 or 42 inch saws for British Columbia trade.

THE PLANER SPECIALISTS

WHY? Because we learned through years of experience that in the manufacture of many types and sizes our attention was distracted from details. But now, as planer specialists making **only one type of machine**, we are able to give ample consideration to each detail and to perfect every feature that makes for the highest efficiency and the greatest durability.

A Typical Machine—the **No. 59 Double or Single Surfacer**. Equipped with Radial Knife Setting Gauge, Truing Devices, Solid Back Round Cutter-Heads and a hundred other features that insure the best in quality and quantity of output.

Keystone Saw, Tool, Steel and File Works

Philadelphia, Pa.

The Madison Williams Manufacturing Co., Limited

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the Sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

WE CAN ALSO INTEREST YOU IN

Saw Mill Machinery

We build a complete line for any desired capacity.

Our **Triumph Turbines** are unexcelled. They will give more power than any other Water Wheel on the market.

Cables Carried in Stock for Renewals

The cheapest way to skid and load logs is by steam power. The

Universal Logger

is a combined two line skidder and loader with separate engine for loading with steel skidding boom and steel swinging loading boom.

It is self-propelling, spots its own cars and moves rapidly from point to point, saving time and the usual switching expense.

Ample water tank capacity is located between the trucks, and the frame is constructed to permit empty cars to pass through the machine for loading by means of its own power.

This machine is especially adapted for light steel or wooden rails.

R. H. SMITH CO., Limited

— St. Catharines, Ont. —

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. All such Claims are FALSE, as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"
REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

PETERBORO SAW MILLS

How the Steam Tension Band Mill increases your daily cut and saws uniform lumber

Think how much more sensitive a steam controlled device is than any system operated by weights and levers.

On our band mill we control the tension on the saw by steam, which is the only way we know of to keep the right strain **always** on the saw.

Thus your saw is always in shape to turn out perfect lumber, and you get a uniformly sawn product.

As the top wheel is moved up and down by steam, when you change your saws you save **all** the time (except ten seconds) formerly taken to lower and raise that wheel and get the proper tension on the saw. That is because no system of screws and gears can act as quickly as steam.

The top guide is also operated by steam so that the sawyer can raise or lower it instantly.

You see therefore that this is **quicker** and easier to handle than any weight tension mill.

That means more lumber every day.

A number of Canadian mills are cutting with it this season. Would you like to know who they are so that you can see it working before the mills shut down?

Car Flooring, in Required Lengths

Our Red Pine, put up Box and Better, is nice stock. Take a Sample Car, and we are assured of further patronage.

The Mill Culls, though a little narrow, are otherwise "Choice," being culled for little red streak and little waste. They are splendid for Box Manufacture, and the Dead Culls too, with little waste, can be used for same purpose.

Try us, we will endeavor to satisfy you.

We have our whole season's Cut to dispose of.

We Stand Behind Every Garment Sold!

Mackinaw Pants
Long and Short, 35 oz.

The fact that "Carss brand" is the only strictly waterproof Mackinaw sold is well-known to the lumber trade.

We stand behind every garment to which we affix our brand, and guarantee its genuineness. You are sure of honest value for your honest money.

"Carss Mackinaw" is the standard by which all others are judged. Then why experiment with other brands when you can have the standard itself for the asking.

The Carter-Stevens Lumber Co., Limited

103 Bay Street - TORONTO

Want to Buy

Style "B" for Mill Furnace

The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one :—

Berridale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited, Orillia.

Dear Sirs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.
